PUBLISHER'S ANNOUNCEMENT

In reprinting Burnet's famous Art Essays, we have done this with the idea of placing the book before students and lovers of Art and marketing it at a price within the reach of those of moderate means. The illustrations have been taken from the original editions published in 1822, 1826 and 1837 and the text re-set from new types. No alterations have been made in Burnet's phraseology and it is verbatim.

Our original edition we secured after many difficulties, as the book has been out of print for so many years, and it is with gratification that we launch this edition to an appreciate public.

FRANK V. CHAMBERS.

Philadelphia, September, 1913.

PREFACE

In prefacing a work of this brief description, where so many branches of the Art of Painting are introduced with little more than an enumeration of their component parts, I ought to apologize, in the first instance, for thus attempting to convey any information which can be carried into practical usefulness in so small a compass; my motive for so doing was to give, if possible, an insight into the intricacies of the Art, without distracting the attention of the reader by a multitude of examples, whose union often destroys the strong impression of a single illustration. Though the varieties of painting are endless, yet the properties of which these varieties are composed are, as in music, few in number; I have endeavored, therefore, to notice only the leading principles which must be known, and which by reflection and observation can be extended to any infinite series of ramifications. The same simple rules which should regulate the instruction of beginners, I have endeavored to point out as existing in the highest departments of the Art, communicating by their presence that value which a vein of gold imparts to a mass of inferior matter. To some it may appear that the subject is too physically treated. I have been actuated so to do by the custom of the present time, and surely every one ought to know something of the construction of that instrument he is in possession of, and of its operations on the mind. In what I have advanced, I have quoted the opinions of the best authors to corroborate and strengthen my own, thereby hoping to render an Art by which civilized society is so highly embellished, more known and appreciated.

JOHN BURNET.

AN ESSAY

ON

THE EDUCATION OF THE EYE

BY
JOHN BURNET, F. R. S.

N A country so largely connected with manufactures as this is, we cannot but wonder why the education of the eye has not been more generally cultivated; observing, as is also the case with the ear, that its education in after-life rarely gives the possessor those advantages which result from a proper direction having been given in youth; nor do I see why drawing should not accompany the elements of reading and writing, the complicated forms of the letters in many languages presenting a more serious obstacle than what is required in the rudiments of drawing; and I have no doubt but that a very short time would be sufficient to enable a scholar to draw objects with tolerable correctness. Without this education, not only are the most valuable advantages often lost,¹ but the mind is deprived of one of its chief sources of correct information, and the hand remains in a manner paralyzed and unable to record what the eye takes cognizance of; whereas, when they advance in mutual contact through a course of early instruction, this difficulty is overcome. This ready execution of the hand is to be acquired

¹ Locke, whose attention was turned to this branch of education, says, "when he can write well and quick, I think it may be convenient not only to continue the exercise of his hand in writing, but also to improve the use of it further in drawing, a thing very useful to gentlemen on several occasions, but especially if he travels, as that which helps a man often to express in a few lines well put together what a whole sheet of paper in writing would not be able to represent and make intelligible. How many buildings may a man see, how many machines and habits meet with, the ideas whereof would be easily retained and communicated by a little skill in drawing, which being committed to words are in danger of being lost, or at best but ill retained in the most exact descriptions? I do

only by constant practice, for, however readily the eye may perceive the form of an object, the power of delineating it on the paper or canvas is where the apparent difficulty lies. It is here where its correctness is put to the test. How much constant practice perfects this chain of communication between the eye and the hand may be proved by the facility with which a person acquires the power of writing in the dark, or with his eyes shut. This quick communication, however, is not to be purchased at the expense of correctness, which ought to be the greatest consideration; for if the eye, or ear, falls into a loose, imperfect method of study, the student finds the greatest difficulty in getting rid of such unprofitable groundwork. In advocating the advantages of this branch of education, it is not my province to raise up chimeras, or what might be considered sufficient reasons for deferring it. Those who have the instruction of youth entrusted to them, I am confident, would find it rather an assistance, as it might be given either as an amusement or as a reward of merit; and, in order to put it in the power of any master to instruct, I shall endeavor to proceed in the simplest manner, and with as few diagrams as the subject renders necessary.

MEASUREMENT.

To teach the eye to measure the distance between one object and another ought to be the first proceeding. The forms of the lines which bound these spaces, the shapes contained or excluded by such lines, ought to follow, for, as the eye must have something tangible to work upon, it ought to be

Fig. 1.

simple and evident. I should, therefore, commence by a series of dots or points, first two, then three, four and five; also the angles made by drawing lines from each of several points. A pair of compasses will enable any one

not mean that I would have your son a perfect painter; to be that to any tolerable degree will require more time than a young gentleman can spare from his other improvements of greater moment; but so much insight into perspective and skill in drawing as will enable him to represent tolerably on paper any thing he sees, may, I think, be got in a little time."—*Locke's Thoughts Concerning Education*.

"With regard to the practice of drawing, it will be proper to incite the scholars to industry by showing in other books the use of the art, and informing them how much it assists the apprehension and relieves the memory, and if they are obliged sometimes to write descriptions of engines, utensils, or any complex pieces of workmanship, they will more fully apprehend the necessity of an expedient which so happily supplies the defects of language, and enables the eye to receive what cannot be conveyed to the mind any other way."—*Preface to the Preceptor*.

to compare their correctness with the original, for, until a pupil can accomplish pretty correctly these preliminaries, it is useless to hasten to more complicated matters.

FORM.

As all forms contain more or less portions of a triangle, square or circle, the eye must be taught to comprehend and imitate such objects in their simple forms, in order to fit it for the purpose of seeing such qualities when mixed and combined with more complicated figures.

I would now recommend these forms to be cut out in paper, and viewed in various situations, being set upright, and also viewed in a horizontal position, that the eye may become thoroughly acquainted with the figures in all their variety of shapes, and with the causes of their alterations in form.

Fig. 2.

Fig. 3.

Fig. 4.

I would also recommend the pupil to draw from a cube and a ball, that the eye may become early accustomed to draw from the real objects, in place of flat surfaces, which will give him a power in drawing from Nature unattainable by any other method.

Fig. 5.

Fig. 6.

Fig. 7.

PERSPECTIVE.

Many have been deterred from attempting to learn drawing from the dread of encountering so formidable a department of the art as perspective; whereas, if it is stripped of its geometrical and mathematical intricacies, it will be found a very simple matter, and easy of comprehension.² Perspective, as the word denotes (being a compound of the Latin words

² Long calculations or complex diagrams affright the timorous and unexperienced from a second view, but if we have skill sufficient to analyze them into simple principles, it will be discovered that our fear was groundless. *Divide and conquer* is a principle equally just in science as in policy. Complication is a species of confederacy which, while it continues united, bids defiance to the most active and vigorous intellect, but

per, through, and *specto*, to view), is the art of drawing the several objects as they appear when traced upon a glass, or transparent medium; the art of drawing in perspective, therefore, is nothing more than representing the various objects subject to those laws which regulate their appearance in Nature.³

LINES.

All lines are subject to an alteration in their appearance, except two, a perpendicular line and a horizontal one; and lines are more or less diminished in length according as they depart from the parallel of the base line; for example, if a person holds a pen or a stick parallel with the eyes, and gradually turns it around, he will see it gradually become shorter, until it assumes a mere spot when it is placed with the point directly toward the eye, as it then covers what is termed the *point of sight*, being a point immediately opposite the observer's eye, and upon the horizontal line, which is always of the height of the eyes of the spectator; and, as it is turned around, it will describe innumerable points along the whole line. These are termed *accidental points*, and vary according as the

of which every member is separately weak, and which may therefore be quickly subdued if it can be broken. The chief art of learning, as Locke has observed, is to attempt but little at a time; the widest excursions of the mind are made by short flights frequently repeated."—*Doctor Johnson*.

³It was in the sixteenth century that *Perspective*, a new branch of optics, was revived, or rather invented; this is more a business of *geometry* than optics, and is indeed more an art than a science; but since it is derived from optical principles, and as the use of it is to give pleasure to the eye by a just representation of natural objects, I would do wrong not to give a short account of its rise and progress. The art of perspective owes its birth to painting, and particularly to that branch of it which was employed in the decoration of the theater, where landscapes were principally introduced, and which would have looked unnatural and horrid if the size of the objects had not been pretty nearly proportioned to their distance from the eye. We learn from Vitruvius that Agatharchus, instructed by Eschylus, was the first who wrote upon the subject, and that afterward the principles of this art were more distinctly taught by Democritus and Anaxagoras, the disciples of Agatharchus. Of the theory of this art, as described by them, we know nothing, since none of their writings have escaped the general wreck that was made of ancient literature in the dark ages of Europe. However, the revival of painting in Italy was accompanied with a revival of this art. The first person who attempted to lay down the rules of perspective was Pietro del Borgo, an Italian. He supposed objects to be placed beyond a transparent tablet, and endeavored to trace the images which rays of light emitted from them would make upon it, but we do not know what success he had in this attempt, because the book which he wrote upon the subject is not now extant. It is, however, very much commended by the famous Egnazio Dante; and upon the principles of Borgo, Albert Durer constructed a machine, by which he could trace the perspective appearance of objects. Balthazar Perussi studied the writings of Borgo, and endeavored to make them more intelligible; to him we owe the discovery of points of distance, to which all lines that would make an angle of 45 degrees with the ground line are drawn. A little time after, Guido Ubaldi, another Italian, found that all lines that are parallel to one another, if they be inclined to the ground line, converge to some point in the horizontal line, and that through this point also a line drawn from the eye, parallel to them, will pass. These principles put together enabled him to make out a pretty complete theory of perspective."—*Priestley's Optics*.

Since then the *Jesuits' Perspective*, *Brook Taylor's*, *Malton's*, and others, have rendered the most difficult and intricate diagrams clear and comprehensible.

lines run more or less at right angles from the base line. Lines also vary according as they are situated above or below the observer's eye; for instance, if a book is held up horizontally before the eye, the under cover will be seen when held above, and the lines of its sides appear to run down

Fig. 8.

to a point on the horizontal line. When underneath the eye, the upper cover will be seen, and the lines describing the sides appear to rise up to the horizontal line.⁴ Before proceeding further, for the better understanding the several lines already mentioned, and showing how they are affected, I shall give an explanatory figure.

The above represents a cupboard with folding doors. Being placed immediately before the eye, the sides appear to rise and descend to the point of sight, A; also the door B, from its being opened at right angles with the base line, while the lines of the door C appear to run to the accidental point D. This point will vary its situation according as the door is more or less opened, which explains what are termed accidental points.

Fig. 9.

⁴The truth of this may be also clearly proved if a person holds up a piece of glass on which a series of lines are drawn, radiating from the center; for by looking through it either up a street, avenue, or long room, he will perceive those lines of the pavement, buildings, etc., which are at right angles with the base line, fall in with and cover many of the lines, so drawn on the glass, for as they all run to the point of sight, they will of necessity converge, since the spaces between them diminish as they recede from the spectator.

DIMINUTION.

All objects diminish in size as the spectator departs from them, hence two parallel lines seem to approach each other as they recede from the eye; and this diminution will appear more or less sudden, according as they commence from a near point, or one more removed. For example, if the hand is held near the eye, it will intercept a larger space than when held out at arm's length.

Objects diminish in an increased ratio until removed to a certain distance, when the diminution appears less violent. This may be made apparent by the following diagram:

Let the line A represent the spectator, and the line B represent a line of pavement. The circular line C, which cuts through the visual rays⁵ as they approach the eye, will show the diminished ratio as the squares become more distant. And, as they have to be represented upon a plane surface, their proportions will be as the divisions on D. They will, therefore, present the following appearance to the eye.

When, therefore, objects are commenced too near, they appear out of proportion with the other objects in the work, and, though true according to rule, appear false with regard to their effect upon the eye of the

⁵ Imaginary lines reaching from various objects to the eye.

spectator. This is termed violent or sudden perspective, to avoid which a point of distance is chosen that will look agreeable. The breadth of the squares being determined by the diagonal line running to the point of distance where it cuts through the lines of the pavement, which run to the point of sight, the farther this point is removed the more level the ground will appear, as represented in Fig. 12.

ANGLES.

What we have hitherto said more immediately applies to parallel perspective, so named from all the lines which intersect those running to the point of sight, being parallel with the base line. When, however, a square, or any cubical form, is viewed at the angle, the two sides will not appear to vanish in the point of sight, but run to two points on the horizontal line, called vanishing points; and this mode of treating the subject is called angular perspective. Now, these two points are always at an equal distance from each other, which is one-fourth of a circle. Therefore, if one is determined upon, the other is easily found; for, as one departs from the point of sight, the other appears to approach it, as any one may perceive by turning around a sheet of paper, or a book, from a situation where one side is parallel with the base line, until it is viewed upon the angle. The cause, of this, perhaps, may be more clearly explained by the following figure:

Fig. 13.

Suppose the circle to represent the line of the horizon, which is the true representation of it when viewed out at sea, or where no obstruction intercepts it, for then the water, coming in contact with the sky, presents a circular horizontal line. If a person, therefore, was placed at *d*, and, looking to the point *a*, the line *c* would be parallel with the base, being at right angles with *a*, and, consequently, occupying one-fourth of a circle; but, if he turned in the direction of *n*, then *a* and *c* would become vanishing points, though still at equal distances upon the horizontal line, and would appear thus:

Fig. 14.

In a panorama, which is a circular canvas, viewed from the center, this mode of measuring the various points is found to agree perfectly with the natural representation of objects.

CIRCLES.

If any one takes a drinking glass or cup in his hand, with the mouth of it toward him, and gradually turns it from him, carefully watching it passing through all the elliptical forms, until the brim becomes a straight line in appearance, he will have a correct idea how it is that columns, or other circular objects, assume an oval shape at the top or bottom, according as they are below or above the eye. Or, if he holds the cup with the side downward, and turns the mouth gradually around toward him, he will perceive the cause why arches, or circular gateways, appear elliptical in a side view. It arises from parts of the circle being more foreshortened than other parts; that is to say, those parts which come more in the line of the visual rays. For example, let a circle be divided into equal parts, and suppose the eye of the spectator placed at *a*, those parts which lie in the direction of the rays of vision, *n*, occupy less space on the line *c*, which cuts through them, and, when drawn upon a flat surface, would present an appearance like *d*, Fig. 16. Or imagine a line drawn through the center, parallel with the base line, and which accordingly retains its exact length. Those portions of the circular line which lie in the same direction are less diminished, while the other parts, lying in an opposite direction, naturally become subject to the greatest degree of foreshortening, as in Fig. 17.

Having now gone through the several forms of a triangle, square and circle, I shall here recapitulate the influence of perspective upon their

several lines. We have seen that lines are shortened according as they fall in the direction of the visual rays, and retain their original length only when they cut them at right angles. Now, this takes place wherever the objects are placed, whether near the foreground or in the distance, the eye of the spectator being a point from which imaginary lines radiate in any direction, and which are termed rays of vision, and along which imaginary lines all objects are received upon the retina;⁶ and, though in

Fig. 15.

Fig. 16

painting we are obliged to delineate everything upon a flat surface, yet, properly speaking, the line which cuts through these rays at equal distance from the eye is circular. We have seen also that all objects diminish in size according to their distance from the spectator, and that this diminution is more or less sudden according to the closeness of the spectator to the object. Upon this matter the taste and judgment of the artist is shown, because, though true according to Nature, yet it may be repre-

Fig. 17.

⁶ *Kepler*, who in 1600 was the discoverer of the seat of vision on the *retina*, says as to the images of objects being inverted in the eye, it is the business of the mind to trace the progress of them through the pupil, and refer them to those places of the objects themselves from which they seem to have proceeded.

sented with a very bad effect, and one figure of a group, or one column of a row, may be rendered preposterously large, so as to offend the eye, which, though at all times pleased with the truth, yet will be more delighted when that truth is rendered agreeable.⁷ When this distortion takes place in reality, we naturally change our position, until the eye is satisfied; but in painting, the whole being a flat surface, we change our position in vain.

We have also seen that all horizontal surfaces of objects diminish in breadth as they approach the horizontal line, and regain their true width when they depart from it, either by being immediately above the eye or directly under it, as may be perceived by the following diagram:

Now, this rule applies to all flat surfaces, whether approaching the horizontal line, in consequence of their distance from the spectator, or from being placed at different degrees of height; for, if they reach the eye in the direction of an angle of 45 degrees, which is equidistant between a perpendicular and a horizontal line, they will be diminished in apparent width exactly one-half. If they are viewed at a greater or smaller angle, they will increase or diminish in the same degree. This is also the cause why surfaces of objects whose lines are at right angles with their base

⁷ Reynolds, in a note upon *Fresnoy's Art of Painting*, says, "The rules of perspective, as well as all other rules, may be injudiciously applied, and it must be acknowledged that a misapplication of them is but too frequently found even in the works of the most considerable artists. It is not uncommon to see a figure on the foreground represented near twice the size of another which is supposed to be removed but a few feet behind it; this, though true according to rule, will appear monstrous. This error proceeds from placing the point of distance too near the point of sight, by which means the diminution of objects is so sudden as to appear unnatural, unless you stand so near the picture as the point of distance requires, which would be too near for the eye to comprehend the whole picture; whereas if the point of distance is removed so far as the spectator may be supposed to stand in order to see commodiously, and take within his view the whole, the figures behind would then suffer under no such violent diminution."

line increase in length as they depart from the point of sight, either to the left hand or to the right, as may be seen by turning the diagram around, and making the line on which the eye of the spectator is placed a horizontal line in place of a perpendicular. This may appear too much a repetition of what has already been said respecting the cause of objects becoming foreshortened; but, as it is the base on which all rules for true drawing are founded, it must be viewed in every position, that the student may thoroughly comprehend it.

When the mind of the student is informed of the various causes operating upon lines so as to change their appearance to the eye, let him look abroad upon natural objects, and contemplate the various changes produced in their forms by their situation, so that his eye may become familiar with those alterations in form, and his mind enriched by a variety of examples; thus making Nature furnish him with a thousand diagrams, which he ought to draw and write down his remarks upon. He will, by this method, not only educate his eye, but improve his mind at the same time, the study of drawing being intimately connected with observation and reflection.

Having now endeavored to explain the leading principles of perspective, I shall proceed to put them into practical application; but I must premise that it is an essential requisite, before proceeding to delineate any object, that we make ourselves thoroughly acquainted with its general character, otherwise the eye cannot convey to us its image distinctly; neither can the hand render it with energy or precision. Let us take, for example, the human face, the component parts of which every one is acquainted with; yet the niceties of distinction in the several features few eyes can perceive, or render with perfect accuracy. This oftener arises from a want of due examination, so as to be able to guide the eye, than from any deficiency in the eye itself; hence we perceive, in the drawings of children and rude nations, a profile with the eye represented as if viewed in front, or a full view of the face with the nose as if seen in profile. To avoid such incongruities, therefore, the eye must be taught to see the changes which take place, and the mind be made acquainted with the causes of such change.⁸ In illustration of which, if we take a plaster cast or mask of the face, such as is represented in Fig. 19, and draw a line down the center, from the forehead to the chin, we perceive, when viewed directly

⁸ Mengs, speaking of design, which he defines as comprehending the outline, or the circumference of things, including the proportion of their length, breadth and form, says, "This part is composed of two principal divisions, the knowledge of the proper form of a thing, and the manner of seeing it; the one depending upon geometry, the other upon optics: the first implies a knowledge of their optical appearance from the view presented to the sight; this pictorial geometry is necessary to enable the student to delineate with correctness and feeling, and which can only be acquired by careful habit of seeing and drawing with attention. This is the fundamental basis of design, without which it will be impossible to render theoretic knowledge available: for, as in painting, we must express the forms which we see in Nature as they present themselves to our sight, and as their beauty depends upon that little, more or less; which decides their character, so a knowledge of that variation enables us to give a true representation."

in front, that it presents a straight perpendicular line, as in No. 1, though actually full of undulations from passing over the entire profile; but, as these projections and recedings of the line are immediately under each

other, they reach the eye in the same manner as if a string was held up before the mask in a perpendicular direction. If, however, the mask is viewed when turned around halfway between a profile and front face, as in No. 2, those parts of the line which recede or project will assume exactly one-half of their true character and projection; while in the profile, No. 3, the line acquires its exact similitude, from its being undisturbed by those laws which regulate perspective. If we were to proceed and examine every feature in the same manner, we should find that the same laws lead us into a correct view of the alterations which take place upon every alteration in position. To explain this more clearly, if we take the mask and hold it with the chin toward us, so as to observe the curve on which the mouth is placed, as in Fig. 20, we can easily perceive that a person viewing it in the direction of the lines A B, which would give him a view of the face between a front and profile (or what is termed by artists a three-quarter), would see one side of the lip of its entire length, while the other side, lying in the direction of the visual rays, would be reduced to a very small space, as may be perceived by its breadth on the ideal line c, which cuts such rays at right angles. Such, also, is the case with the nose, in the same view of the face; one side remains undiminished, while the other side forms a mere outline, being seen entirely under the influence of perspective.

In finishing this part of the essay, I cannot conclude without reminding the pupil of the extreme importance of the very first preliminaries of the work, teaching the eye the power of measuring the distances between several points, as it is the basis of correct drawing. In drawing a head,

if the points where the eyes, nose and mouth ought to be placed can be correctly put down, one of the greatest difficulties will be conquered, and the detail of which each feature is composed rendered easy and effective,⁹ and the same remark applies to the power of combining the several parts of the largest assemblage of objects. The eye marks the distance of one or two leading points, which serve as a station to start from, and by a careful combination of exact dimensions moves over the whole space with a species of ideal trigonometry. Being also educated to observe the variations of the several lines according as they are more or less under the influence of perspective acting upon their form or size, a clear, defined outline will be the result, not only unattainable by any other method, but, even if attained, unaccompanied by the power of judging of its correctness.

Fig. 20.

The power of seeing objects correctly is gained by a careful examination of their general appearance, and of the component parts which produce such general appearance. It is necessary, therefore, before proceeding to delineate any object, to observe it attentively in the first instance, to examine it as a whole, so as to be convinced of its great leading features, the various shapes the principal lights take, also the forms of the darks, what occasions them, and why they are darker at one place than at another;

⁹ Reynolds, speaking of Frans Hals, says, "In his works the portrait painter may observe the composition of a face, the features well put together, as the painters express it, from whence that strong marked character of individual Nature, which is so remarkable in his portraits, and is not found in an equal degree in any other painter. If he had joined to this most difficult part of the art a patience in finishing what he had so correctly planned, he might justly have claimed the place which Vandyck, all things considered, so justly holds as the first of portrait painters." In another place he says, "The likeness of a portrait consists more in the preserving the general effect of the countenance than in the most minute finishing of the features, or any of the particular parts."—*Sixth and Fourteenth Discourses*.

the size and shape of the smaller component parts, where they are congregated most, and where the greatest vacuum is situated; where portions are seen entire, and where they are intercepted. Without the eye taking cognizance of all these before proceeding, it will be impossible to give a just representation, either in the detail or in the general effect;¹⁰ it will, more-

Fig. 21.

over, have a prejudicial influence, inasmuch as it will lead to a style of drawing without feeling, character or decision. One reason why the drawings of eminent artists are superior to all others is the great intelligence every line indicates, the smallest touch being expressive of the character. Another advantage this previous contemplation of the subject has is the storing of the mind with materials for future occasions, when it is necessary to have recourse to the memory. Knowledge in drawing, as well as in other sciences, is having ready a mass of materials, which we can apply to the subject in hand. Drawing much improves us as little as reading much, unless we contemplate and understand as we proceed. Those who have acquired a readiness of hand without correctness and study have but the shadow instead of the substance, and, though to the unlearned their works have the appearance of excellence, yet to educated eyes they seem in the light of forgeries, or like the language of him who talks speciously of a subject he does not understand. After the hand has once acquired

¹⁰ To illustrate this, we may have recourse to Titian's bunch of grapes, which we will suppose placed so as to receive a broad light and shadow. Here, though each individual grape on the light side has its light, and shadow, and reflection, yet altogether they make but one broad mass of light: the slightest sketch, therefore, where this breadth is preserved, will have a better effect, will have more the appearance of coming from a master hand—that is, in other words, will have more the characteristic and generale of Nature, than the most laborious finishing, where this breadth is lost or neglected.—*Reynolds on Fresco*, note 40.

this delusive dexterity, the student becomes contented, and unable to execute anything correctly in future. Sir Joshua Reynolds remarks that "young men have not only this frivolous ambition of being thought masters of execution inciting them on one hand, but also their natural sloth tempting them on the other. They are terrified at the prospect before them of the toil required to attain exactness. The impetuosity of youth is disgusted at the slow approaches of a regular siege, and desires, from mere impatience of labor, to take the citadel by storm. They wish to find some shorter path to excellence, and hope to obtain the reward of eminence by other means than those which the indispensable rules of art have prescribed. They must, therefore, be told again and again that labor is the only price of solid fame, and that, whatever their force of genius may be, there is no easy method of becoming a good painter." In another place he justly observes that "the first business of the student is to be able to give a true representation of whatever object presents itself, just as it appears to the eye, so as to amount to a deception; and the *geometric rules of perspective* are included in this study. This is the language of the art, which appears the more necessary to be taught early, from the natural repugnance which the mind has to such mechanical labor, after it has acquired a relish for its higher departments." Also in his first discourse he says: "A lively and what is called a masterly handling of the chalk or pencil are, it must be confessed, captivating qualities to young minds, and become, of course, the objects of their ambition. They endeavor to imitate these dazzling excellencies, which they will find no great labor in attaining. After much time spent in these frivolous pursuits, the difficulty will be to retreat, but it will be then too late; and there is scarce an instance of return to scrupulous labor after the mind has been debauched and deceived by this fallacious mastery."¹¹ We find in many of the drawings of Michael Angelo, Raffaello, and even Rubens, some portions carefully studied and finished with the greatest correctness from the model, some difficult passage which required labor and finish to overcome, or some portion of great beauty,

¹¹ Freedom of execution, or masterly handling, as it is termed, is often taught to pupils that they may appear to be making great strides in the art. The master frequently finds his pupil too dull, or too inattentive, to acquire a correct knowledge of his subject, therefore gives him the power of displaying an appearance of dexterity. To an uneducated eye, a sketch of a tree, for example, may be hit off by the pupil with sufficient resemblance to satisfy all parties; the parents see nothing in the original different from the copy, for that which appears to them but a scribbled appearance, in the original indicates to the eye of an artist foliage, branches, and shadows; thus their education seems finished before it is in reality begun, and they leave school without the power of drawing a line. In after-life, when they wish to delineate objects correctly, they find this dexterity rather an incumbrance; the eye, previously debauched, is incapable of receiving a true impression; while the hand, necessarily confined to the several spaces allotted to the different forms, feels cramped and awkward, and obliges them to throw down the pencil in despair. In other branches of science we find this dexterity checked in its infancy. What would be thought of a child who had been taught to run over the keys of a pianoforte without any definite meaning? Or of a master who encouraged the scribbling of a boy to imitate a free hand? I remember an artist who always took an opportunity of disconcerting the pretensions of such precocious geniuses in drawing, by laying down a key or a pair of snuffers for them to delineate.

which nothing but fidelity could represent. From the contemplation of the works of the great painters we perceive a comparative dryness and stiffness in their earlier productions, compared with their later pictures. We, therefore, are naturally led to conclude that we can accomplish by a shorter method what they have shown us to have been their aim—breadth, grandeur and freedom of execution. It will be found, however, that, though a few strokes by the hand of a master often express in his later-works as much as the most careful finishing of his early pictures, yet that arises entirely from his having acquired, by long practice, a mastery over his materials, and, by long contemplation, a perfect knowledge of what are the leading features and peculiar character of every object.

Notwithstanding the foregoing remarks, careful drawing and minute finishing are to be regulated in a great measure by the nature of the work in hand, otherwise these qualities, excellent in themselves, are liable to be caught at, as an excuse for doing something which requires the least exertion of the mind. Though it is absolutely necessary to be able to draw correctly whatever may be placed before you, yet it does not follow that the same labor is to be carried into the subordinate parts, otherwise a long portion of life might be spent in delineating the intricate ramifications of trees and plants, or in mapping out with painful fidelity the hedges and ditches of a whole county. The correctness of which it is necessary to be possessed is to be employed in rendering with accuracy the vital portions of all works, frequently leaving the minor passages to be filled up from our general knowledge and practice. How vexatious is it to see young men attending academies and museums, month after month, drawing from antique statues, in place of bestowing their whole care in giving the outline and form correctly, waste their youth in industrious idleness, in representing the flaws and excoriations of the mutilated marble, or in smoothly stippling in a surrounding mass of background!

AERIAL PERSPECTIVE.

Lineal perspective being that part of drawing which is produced by the means of lines only, aerial perspective is made use of to designate those changes which take place in the appearance of objects, either as to their receding or advancing, from the interposition of the atmosphere; therefore, to the application of this quality the artist is mainly indebted for the power of giving his work the space and retiring character of Nature; but, though the eye is at all times pleased and gratified with the power of viewing distant prospects, yet objects require a certain definition to lead the imagination, without perplexing and troubling the mind. Neither are we pleased by sudden jumps from the foreground to the extreme distance. The eye is more delighted, therefore, in being carried over a gradual diminution of many intervening objects, or in searching for outlets through

screens of intervening trees or clumps of buildings; such perforations assisting by their framework the distant tone of color with which the most remote objects are nevertheless sufficiently embodied out. Now, though the interposition of the atmosphere gives us the means of producing the effect of distance in a picture, yet the mind requires a certain variety to hold it in amusement, and a certain appearance of substance to give a reality to the scene. On the other hand, when the atmosphere is deprived of the means of refraction, by reason of its clearness, a false representation is produced, and objects appear nearer than they are in point of truth (as may be perceived in many scenes in Switzerland), and the eye is deprived of the gratification of viewing the outlines of objects through a variety of strengths.¹² When we reflect that the art of painting is an attempt to deceive the eye, in representing upon a perpendicular surface the variety of planes upon which the several objects in Nature are placed; when we reflect that the painter is deprived of many collateral means of assisting the deception, it requires his whole knowledge to be employed in working out the result, lines possessing distinctness of form, bulk and minutiae, light and dark to give them their full force upon the eye, colors unassociated with atmospheric influence, with the reverses of all these assisting by contrast. We must admit that a knowledge of aerial perspective embraces in its effects nearly the whole art of portraying the retiring and advancing of objects. In the works of Albert Cuyp and Claude Lorraine we have many examples of this quality in perfection, where the interposition of the air, whether of a yellow or blue color, imbues every object with its just proportion according to its relative distance from the foreground, and the near objects are strengthened by black or red or other colors less in unison with the general tone of the picture; also in the foreground of many of the works of Cuyp and others, the student may perceive the shadows under the leaves and stones in the foreground, broad, black and of large, decided forms. Now, though this is the general characteristic of this department, we see in many works of the best artists objects very much diminished in size according to their true perspective distance, yet possessing a force of color little removed from the tints of the objects in the foreground. Neither does such harshness prevent them keeping their situations. This arises from the very small space they occupy upon the retina, forming so diminished a picture in the eye, even when painted of the size of Nature.¹³ In historical compositions the most distant

¹² De la Hire enumerates five circumstances which assist us in judging of the distance of objects, namely, their apparent magnitude, the strength of the coloring, the direction of the two eyes, the parallax of the objects, and the distinctness of their small parts. Painters, he says, can take advantage only of the two first mentioned circumstances, and therefore pictures can never perfectly deceive the eye; but in the decorations of theaters, they in some measure make use of them all, different planes being made use of, and different degrees of distinctness.—*Accidens de la Vue*, p. 358.

¹³ Speaking of the retina, Dr. Roget says, "Few spectacles are more calculated to raise our admiration than this delicate picture, which Nature has with such exquisite art, and with the finest touches of her pencil, spread over the smooth canvas of this subtle

objects form often a portion of the story. They are, therefore, to be pronounced with that strength which will enable them to assist the painter in producing the desired effect on the mind of the spectator, nor does truth appear at all violated, provided they are not made out with too great precision. In history and the higher walks of the art, where the greatest liberties are allowed, it may be less necessary to notice the conduct of the best artists in this particular; but we often find it even in landscapes and common representations of natural effects. How often have we observed wood scenes and others prevented from being heavy by the introduction of a few dark touches, and breadth of color and space produced by the small dark of a figure. When, however, the effect of hazy sunshine (such as we see in the works of Cuyp) is to be represented, the most distant objects ought to be rendered with the greatest delicacy; for, the whole atmosphere being then filled with the refraction of light, the middle-ground objects appear to be made out with a uniform tone or half-tint. Aërial perspective, therefore, though understood to be subject to rule, is more completely under the control of the painter than lineal perspective.

I have noticed elsewhere¹⁴ how much in reality objects in motion attract the eye of the spectator, with what intelligence the peculiar walk of those we know is communicated even at great distances. This is one reason out of many why we are allowed to pronounce parts of a picture with more strength than other parts, as the mind of the spectator must be arrested with the same force it feels itself acted upon under natural effects.

The application of aërial perspective, therefore, enables the artist to keep the several objects in their respective situations, and give a natural reality to the most complicated scene. A row of columns will diminish according as they are drawn true to lineal perspective, but it is to this

Fig. 22.

nerve; a picture which, though scarcely occupying a space of half an inch in diameter, contains the delineation of a boundless scene of earth and sky, full of all kinds of objects, some at rest and others in motion, yet all accurately represented as to their forms, colors, and positions, and followed in all their changes without the least interference, irregularity or confusion. Every one of those countless and stupendous orbs of fire, whose light, after traversing immeasurable regions of space, at length reaches our eye, is collected on its narrow curtain into a luminous focus of inconceivable minuteness, and yet this almost infinitesimal point shall be sufficient to convey to the mind, through the medium of the optic nerve and brain, a knowledge of the existence and position of the far distant luminary from which that light has emanated.—*Doctor Roget's Bridgewater Treatise.*

¹⁴ In *Practical Hints upon Light and Shade.*

quality of light and shade that they are indebted for their effect upon the eye. Also, two angles may occupy the same space on the retina, but by this power one is made to approach, and the other to recede, so that one is diminished to the size of a tent, the other increased to a pyramid.

Fig. 23.

In Plate I, Fig. 1, the Canal of Dort, by Cuyp, in the Bridgewater collection, we not only find an excellent example of *aërial perspective*, but also of that assemblage of lines produced by the repetition of forms, which assists the receding of objects from their diminution, the doubling of the lines in producing richness of effect, and that harmony which arises from one line counteracting another in its direction, giving thereby a general balance to the whole. The effect of *aërial perspective* upon the eye being mainly attributable to the application of shadow to the several outlines, thereby giving them their approaching or receding character, such arrangement is to be chosen which will give them this quality, and which is to be afterward repeated in smaller portions through the piece. In accidental combinations in Nature we often perceive this arrangement (as in Fig. 2, Plate I), which ought to be sketched and reflected upon as one of the great means we have of enabling us to cope with her under the disadvantage of working upon a flat surface. We also find *aërial perspective* indebted in its effect to the collection of many parts, whose shadows form a mass of half-tint, their distance bringing them in apparent contact, owing to their diminution; while their softness gives them apparent distance, owing to their want of minute parts, as in Fig. 3, Plate I.

To go through on every occasion with a variety of examples would, I feel persuaded, only perplex the student. If he comprehends any rule, it is easy to extend it. To those who understand slowly, reflection on one or two diagrams will be of more service than educating the eye without impressing the mind. The real trouble in life, in all professions, is the trouble of thinking, to escape which the most laborious trifling is caught at; but, if fairly grappled with at the outset, everything becomes clear, and, in after-life, that which is a continual annoyance to many becomes one of the greatest gratifications. Why is it that, to the eye of an artist, the drawing of a complicated plan is rendered clear at a glance, while to others it requires a multitude of figures of reference and a long explanation?

It is that his mind has been educated in continual intercourse with the eye, and the constant habit of reflecting on cause and effect has rendered a numerous assemblage of lines intelligible to him, which to others uneducated appear like a species of hieroglyphic.

CHIARO OSCURO.

Chiaro oscuro, or light and shade, when applied to the management of a picture, takes a range too wide to be explained without the assistance of a multitude of examples, and even then it would be very imperfect, so endless and multifarious are the changes it assumes, being entirely at the caprice of the painter. Paul Veronese, when questioned about the propriety of accounting for a shadow, answered, "A cloud is passing"; and Reynolds, says, "The proprieties of a painter are superior to all other considerations," and, "he whose aim is to touch the passions must not be too fastidious in pandering to an uneducated eye. The effect is to be produced at any sacrifice; but the painter who accomplishes his purpose with the least violation of truth shows the greatest command of his materials." This it is which places the works of the great painters beyond the comprehension of the ignorant. They only can judge of external matters, and are pleased when the eye alone is gratified; whereas the aim is the homage of the educated mind. "Leonardo da Vinci," Reynolds remarks, "recommends the light side of a group to be brought off a dark ground, and the dark side opposed to a light ground. This, no doubt, was the practice when the arts were in their infancy; but, had he lived to see what has been produced by the contrary method, he would have altered his opinion." If relief or distinctness is the aim of the artist, it is certainly the best; but, if breadth of effect, he will best accomplish it by combining light with light, and losing the darks of the group in a still darker background.

Light and shade, therefore, independent of its effects in rendering objects more distinct and intelligible, has other properties, and those of a higher quality. When painting has to take a station in the ranks along with music and poetry, these properties are the means of giving breadth and grandeur of form, the effects of bustle or repose, and that peculiar emphasis which particular portions of a composition require. Now, in many situations, where such qualities are requisite, Nature offers often little more than a suggestion, and upon such hint the artist is obliged to lay the foundation of his whole scheme, and work it out according to the command he has of his materials, or the quantity he is in possession of. Some compositions being entirely addressed to the mind, while others are confined to a mere gratification of the eye, a greater or less liberty is allowed to be taken with the arrangement of the light and shade according to the nature of the work in hand. Light and shade, or the conduct of the chiaro oscuro of any work, is, therefore, entirely given up to the control

of the artist, to be used for the express purpose of rendering his design complete. Where he departs too much from the arrangements observable in Nature, it becomes capricious, and loses its effect upon the eye of the spectator. When, on the other hand, the everyday occurrences are adopted, his work becomes common and feeble. Reynolds says justly: "When we are required to paint broad, it is not understood that we should paint broader than Nature; but objects are to be so placed that there is scarcely any limit to their breadth of light and shade. In the earlier stages of painting, relief and distinctness were the only requisites sought after.¹⁵ If a round object could be represented upon a flat surface, or any substance so expressed as to induce the spectator to put forth his hand to touch it, as a test of the deception, the height of the artist's ambition was attained; but, as the art advanced, it was found that painting could achieve more honorable results. The mind was to be acted upon, without stopping to gratify the eye at the threshold of entrance. Coreggio seems to have been one of the first who employed *chiaro oscuro* in its greatest extent, to give to his compositions that dreamy character which removes them from the "ignorant present," and which is the result of breadth, and melting of the outline in the tint which surrounds it. If we examine, for example, a room filled with several objects, in open day, the distinctness with which they all present themselves to the eye not only perplexes it in finding a resting place, from each claiming attention, but the quickness with which we are carried from one object to another (from a single glance being sufficient to satisfy our curiosity) destroys that pleasure the mind receives from contemplation; whereas, the same scene, viewed in the evening, by the light of a fire or candle, exhibits effects more pleasing to the eye and gratifying to the mind, which are entirely owing to the breadth of light and shade. Fewer objects present themselves to the eye, and these few acquiring novelty in their forms, from the shadows floating about. Others, entirely buried in obscurity, amuse the imagination in tracing them into form; while the large blank spaces present vacuums for the eye to rest and repose upon. Independent of these results, we also know that objects acquire grandeur from their breadth and simplicity of parts, the shadows being more of one strength, and the lights more of one color, two concomitants of greatness.

¹⁵ In the early stages of the art, we find the outlines of the Egyptian and Grecian figures and ornaments upon the walls marked with a broad, deep, sharp cut indentation, which, receiving a strong shadow, gave great distinctness. In the next stage, we find that the figures were a little raised, so as to form what is termed *basso relievo*; and that they were not rounded gradually from the ground, but cut perpendicularly to the surface. In the more advanced state of the art, when the figures assumed a greater projection, and became what is termed *alto relievo*, where some portions are entirely cut through from the surface, as may be seen in the Elgin marbles, the outlines of those figures less advanced were rounded off, so as to receive less shadow, and thereby give greater value to those in high relief: we also find an attention to the effects of light and shade influence their management of single statues, in the construction of their buildings, and even in the forms of the most trifling utensils. We thus see that the gratification of the eye is one of the chief sources from which the taste of a country emanates, and its perpetuity is in proportion as it is founded upon the great truths observed in the general character of Nature, and its influence on succeeding ages, by its adoption by men of science capable

In entering upon this branch of the art, it will, however, be necessary to confine our remarks, in the first instance, to the effects of light and shade upon the forms of objects, in altering their appearance to the eye of the spectator, without reference to their acting upon the imagination.

All outlines, without the application of this quality, are deficient in giving a true representation to the eye; for example, two circular outlines without shadow have no distinct meaning, but, by the application of this property, they either become convex or concave bodies.¹⁶

Fig. 24.

Fig. 25.

We also find that objects either project or recede according to the strength of their shadows, and become either solids or vacuums from their shadows falling within or without the spaces marked by their outlines.

Fig. 26.

Fig. 27.

We also find that it often indicates the peculiar character of objects when the outline is hid in consequence of the situation of the spectator, as in Fig. 28.

of appreciating its value. Even in the dark ages, when truth and simplicity were overlaid and hid by a mass of ornament and an assemblage of minute parts, a combination of beautiful arrangement has arisen out of such Gothic absurdities, which has given to painting, sculpture and architecture a fullness of effect unattainable by any other method. The endless and fatiguing portions of minutiae, which lay scattered over the surface, have been collected, and arranged in masses of richness and repose; the spottiness of strong, harsh colors have been softened and subdued by harmony and opposition; while the dry and cold outline of individual form has been adapted to the gratification of the educated eye, founded upon the great principles of truth and simplicity.

¹⁶ "We judge of the figure and shape of bodies chiefly by the variations of light and shade, and our associations taken thence are so strong, as we are easily imposed upon by a just imitation of the light and shade belonging to each shape and figure in their several situations with respect to the quarter from which the illumination proceeds. It is from the associations considered under this proposition, and particularly in the last paragraph, that painting conveys such exact ideas of shapes, figures, magnitudes and distances, and the camera obscura of motion also, by means of impressions that proceed from a plane surface."—*Hartley on Man, on the Sense of Sight.*

Fig. 28.

In drawings of machinery, this is often of the utmost importance, as information is the only point aimed at. We likewise often find shadow made use of for the enriching of the subject, by making the shadows of complicated objects fall upon a background of an uneven surface, as in Fig. 29.

Fig. 29.

Any work treating of the education of the eye, however short, must necessarily touch upon points spreading over a large range of study, and, of course, occupying a long space of time to become master of. It will, therefore, be difficult to separate those parts which require a power in the mind from that portion which depends more upon the cultivation of the eye, accompanied with very little effort of thinking. Nothing but early practice can enable the eye to see, and the hand to put on paper, the

various objects necessary to painting with readiness and fidelity; as has been remarked by Reynolds, who says: "A degree of mechanical practice must precede theory. The reason is that, if we wait till we are able to comprehend the theory of the art, too much of life will be passed to permit us to acquire facility and power. Something, therefore, must be done on trust, by mere imitation of given patterns, before the theory of the art can be felt." Yet, nevertheless, the attention should be gradually awakened to observation, otherwise the power of the mind will lie too long dormant to be easily called into action when judgment is acquired, for, as he further observes, "an artist ought to see clearly enough to enable him to point out to others the principle upon which he works, otherwise he will be confined, and, what is worse, he will be uncertain." In the portion of this essay, therefore, which is passed over, I have endeavored to confine myself merely to that extent of knowledge which every one ought to possess to enable him in after-life to enjoy the beauties of Nature and art, and give him the power of communicating his ideas usefully to others. I shall now endeavor to trace through the higher departments of art those principles of design upon which painting depends for its operation on the mind, and which places it in the same rank with poetry and music.

INVENTION.

Invention is the great soul of painting, without which the being in possession of an accumulation of studies is of little avail. We may collect the materials, but we cannot build without a plan, nor can we construct that plan without a perfect knowledge on what to raise the superstructure. When Raffaele was commissioned to paint the apartments of the Vatican with representations of Theology, Philosophy, Poetry, etc., it was necessary, in the first place, that he should know not only the origin and foundation of each of them, but also the character and history of those personages who ranked pre-eminent in the several departments of science, that by the combination of such figures he might be enabled to illustrate the subjects in hand; for it is by this method that the artist shows his imaginative powers, for, though this part of the work may belong to the poet and historian in an equal degree, yet the mind of an artist, from his habits of thinking and from a knowledge of what is within the power of his art, gives the illustration of the subject a more graphic turn than either;¹⁷

"It is the descriptions of poets and historians possessing this character which renders them more striking to the imagination; such as the description of the Last Judgment by Peter Aretin, which made Michael Angelo regret that he had composed the subject previous to receiving his letter: "Who would not tremble," he writes, "at taking up his pencil to trace so tremendous a subject? I see, in the midst of innumerable beings, Antichrist, with features which you alone could imagine; I see terror imprinted upon the face of the living; I see the faint traces of the sun, the moon, and the stars, whose fires are perceptibly diminishing. The elements appear dissolving. I see all Nature horror-struck, barren, and gathered up in its decrepitude; I see Time emaciated and trembling, who, arrived at his last stage, is reposing on the dried-up trunk of a tree; and

therefore, though the education of an artist's mind is in many things similar to the education of that of others, yet, in addition, he requires a knowledge of the various methods the great painters have employed to explain and exemplify their ideas; "for it is only by knowing the inventions of others we learn to invent, as it is by knowing the thoughts of others we learn to think." Mengs observes that it is invention which makes noble the art of painting, and discovers the force of the artist's understanding, and that Raffaele obtained a rank with great poets and orators from this source. Invention being the work of the mind addressed to the mind, composition that of the eye addressed to the sight, yet, though in many things the mind of the poet or historian is similar to the painter's, the power of the latter is much more limited. The historian may have a hundred pages to convey his story; the painter has but one. This circumstance has led mankind in all ages to allow him a greater latitude and license in embodying any representation. His invention, therefore, takes a wide range through the whole features of the event, whatever it may be, and enables him to combine in one focus every means of rendering the story attractive, clear and effective. He invents, therefore, those arrangements which awaken the mind, from their giving rise to an association of ideas. He selects also those points which bear the strongest upon the character of the subject to be represented, and which, from their nature, are most palpable to the eye, to heighten their effect by the judicious introduction of images operating by means of contrast, and endeavors to combine the whole by the most natural and unaffected method. The power of invention, therefore, in a painter, must depend upon his extent of information, his command of the materials applicable to his art, and a felicitous choice of the particular incidents most striking to the eye. If he invents from history, it will be necessary to take the most current version of the story for his guide, and engraft upon it those embellishments derived from costume, manners of the people and local scenery, painting everything from Nature, which gives a wonderful appearance of truth and force to the representation. From poetry or allegory a greater liberty of enriching the design will be allowed, as the whole range of ancient and modern fable lies open for his

while the trumpets of the angels resound through all hearts, I see *Life* and *Death* overwhelmed with extraordinary confusion, the one is wearied with lifting up the dead, while the other strikes down the living; behind, I see *Hope* and *Despair* conducting troops of the good and the bad. The sky is suffused with the brightest rays. Christ, seated on clouds, is environed with splendor, and with the terrors inspired by the heavenly hosts, his face is resplendent with light, and his eyes, shining with a soft yet terrible fire, fill the virtuous with lively joy, and the wicked with mortal fear. I see the ministers of hell, with horrible countenances, who, surrounded by the glory of saints and martyrs, mock the Cæsars and Alexanders of the world, and yet not knowing how to get the better of themselves. I see *Renown*, with her crowns and palms trodden under foot, thrown down under the wheels of her own triumphant chariots. I hear the Son of God pronouncing the *last judgment*; at his voice the good and the bad are separated; the world crumbles to pieces at the peals of thunder. Darkness divides Paradise from the furnaces of hell. In retracing these terrible images, I said to myself, one would tremble as much at seeing the work of Buonarrotti as at the day of judgment itself."—*Peter Aretin's Letters from Venice.*

purpose of illustration. At the head of this department of the art, by universal consent, and especially by those who have most carefully examined his works, stands Raffaele. Not only do his inventions embrace the most leading and most striking parts of the story, but he carries the spectator back to its commencement by a chain of the most natural circumstances, and shows also, by the same felicitous extension of his design, those results which followed its taking place; thus exhibiting in one page the contents of a volume, such as we see in his "Death of Ananias," his "Transfiguration," the "School of Athens," the "Sacrifice at Lystra" and many others. Lanzi, speaking of this quality of Raffaele, says: "Various writers have mentioned the 'St. Paul at Lystra,' one of the cartoons, as an example (Plate II). The artist has there represented the sacrifice prepared for him and St. Barnabas as to two gods, for having restored a lame man to the use of his limbs. The altar, the attendants, the victims, the musicians and the axe sufficiently indicate the intentions of the Lystrians. St. Paul, who is in the act of tearing his robe, shows that he rejects and abhors the sacrilegious honors, and is endeavoring to dissuade the populace from persisting in them; but all this were in vain, if it had not indicated the miracle which had just happened, and which had given rise to the event. Raffaele, therefore, added to the group the lame man restored to the use of his limbs, now easily recognized by the spectators. He stands before the apostles, rejoicing in his restoration, and raises his hands in transport toward his benefactors, while at his feet lie the crutches, now cast away as useless. This had been sufficient for any other artist, but Raffaele, who wished to give a greater appearance of reality, has added several people, who, in their eager curiosity, remove the garment of the man to behold his limbs restored to their natural state." As the people called St. Paul Mercury, from his being chief speaker, Raffaele has alluded to this by a statue of Mercury in the distance, and a figure in the foreground with a chaplet of ivy, bringing in a ram, both indicative of the sacrifices to that god. By the uplifted hands of the restored cripple, and the youth who stretches out his hands to arrest the arm of the sacrificers, we perceive the effect of St. Paul's persuasions, in the same way as he indicates the conversion to Christianity of the woman of Damaris and Dionysius in the cartoon of Paul preaching at Athens. In the inventions of Raffaele we find the representation of any event, extending its effects on the several spectators in a variety of ways, producing the most natural action and expression, and all conducive to the illustration of the subject. His rich store of materials from the Greek and Roman antique, with the inventions of those artists who preceded him in the restoration of painting in Italy, enabled him to embellish his design with an endless accumulation of incident, giving chasteness, simplicity and the power of carrying the mind back to times long gone by. No one has possessed so great a command over his materials, or greater address in adapting them to his own purpose. The Greek gems and statues, the Roman basso relievos, the primitive character of

the works of Giotto and Masaccio, the grand outline and foreshortening of the figures of Michael Angelo and Leonardo da Vinci, may be all traced through his works, but the inventive genius which has called them into new existence, with a more natural and a more powerful effect on the spectator, is peculiarly his own.

Invention being more properly a combination of those qualities which affect the mind and awaken sensations in the imagination of the spectator, the inventions of Raffaele affect different spectators according to their different degrees of taste or cultivation; whereas the inventions of Paul Veronese, Tintoret and others of the Venetian school, being more addressed to the eye, please and captivate all beholders, from their harmony of light and shade, and their beautiful and gorgeous arrangement of splendid color. With Raffaele the leading point of the story is boldly and nobly expressed, while its effects are diffused and spread over the countenances and actions of the adjoining figures, and revived and embellished by episodes and representations of the preceding and following events, acting upon the more subordinate or more extended portions of the composition, such as we see in the "Ananias," the "Heliodorus," the "Sacrifice at Lystra," the "Attila" and the "Transfiguration." Thus, what is effected in the one case by the diffusion of light and color is produced by Raffaele through the medium of the expression and action of his figures. This it is that has gained for him the appellation of the painter of mind, and his making use of those materials from which the taste and cultivation of the mind is derived gives to his works that charm which increases by contemplation, since they revive within us ideas of all the great and beautiful works we have ever beheld.

Invention being more properly the province of the mind than the eye, perhaps it is unnecessary to dwell longer upon it in this place; but we must always bear in recollection that the mind of an artist is formed from a contemplation of those circumstances which it will be in his power to make use of, and that is one reason, among others, why I dwell more particularly upon the inventions of Raffaele than upon those of Michael Angelo.¹⁸ They are more practical, and can be adopted by those whose works are addressed to the feelings of all classes, or, as Lord Bacon says, "come home to the business and bosoms of most men." The inventions of

¹⁸ Reynolds, drawing a comparison between Michael Angelo and Raffaele, says, "Raffaele had more taste and fancy, Michael Angelo more genius and imagination. The one excelled in beauty, the other in energy. Michael Angelo has more of the poetical inspiration; his ideas are vast and sublime; his people are a superior order of beings, there is nothing about them, nothing in the air of their actions or their attitudes, or the style and cast of their limbs or features, that reminds us of their belonging to our own species. Raffaele's imagination is not so elevated; his figures are not so much disjoined from our own diminutive race of beings, though his ideas are chaste, noble, and of great conformity to their subjects. Michael Angelo's works have a strong, peculiar and marked character; they seem to proceed from his own mind entirely, and that mind so rich and abundant, that he never needed, or seemed to disdain to look about for foreign help. Raffaele's materials are generally borrowed, though the noble structure is his own. The excellency of this extraordinary man lay in the propriety, beauty and majesty of his characters, the judicious contrivance of his *composition*, his correctness of *drawing*, purity of taste and skillful accommodation of other men's conceptions to his own purpose.

Michael Angelo, on the other hand, elevate the feelings only of the learned, while they appear extravagant and overcharged to the generality of mankind; notwithstanding which, this is the spirit which ought to influence the taste and genius of other artists, and which made Raffaele exclaim that "he thanked God that he was born in the same age with that great man!"¹⁹ We need not go further than refer to his great work of the "Last Judgment," where he introduces Charon ferrying over the souls of the damned, and other allusions to the heathen mythology, which give to the Christian creed the adventitious character of learned fable. On the other hand, Raffaele grasps his subject with the power of one who relies upon truth and Nature for the effect; and, leaving the regions of poetry and fiction, gives an identity to the scene, founded upon the principle of simple facts being ennobled by the great powers of elevated art. Besides, we must never forget that the public taste is already formed from a contemplation of the many great works now in existence, and which have stood the test of ages, and that it is only by being in some manner conformable to these we can ever hope for a favorable reception.

COMPOSITION.

By composition is generally meant the form and arrangement of the several parts considered as a whole; consequently, the form or plan of any composition is the first process the painter practically commences with. The nature of the subject having been settled, he weighs in his mind the effect to be produced upon the spectator. He, therefore, arranges his figures and objects accordingly, and endeavors to distribute his materials in that form which will best accord with his intention. The illustration of his story, the distribution of his light and shade and color, the localities of the scene, all present their individual interests to his notice, while his

Nobody excelled him in that judgment with which he united to his own observations on Nature the energy of Michael Angelo, and the beauty and simplicity of the antique. To the question, therefore, 'Which ought to hold the first rank, Raffaele or Michael Angelo?' it must be answered, that if it is to be given to him who possessed a greater combination of the higher qualities of the art than any other man, there is no doubt but Raffaele is the first. But if, as Longinus thinks, the sublime, being the highest excellence that human composition can attain to, abundantly compensates the absence of every other beauty, and atones for all other deficiencies, then Michael Angelo demands the preference."—*Fifth Discourse.*

¹⁹ "From time to time there arise upon the earth men who seem formed to become the center of an intellectual system of their own; they are invested, like the prophet of old, with a heavenly mantle, and speak with the voice of inspiration. Those that appear after them are but attendants in their train, seem born only to revolve about them, warmed by their heat and shining by their reflected glory. Their works derive not their strength from momentary passions or local associations, but speak to feelings common to mankind, and reach the innermost movements of the soul, and hence it is that they have an immortal spirit, which carries them safe through the wreck of empires and the changes of opinion. Works like these are formed by no rule, but become a model and rule to other men. Few, however, among us are permitted to show this high excellence. Ordinary minds must be content to learn by rule, and every good system must have reference to the many and not to the few."—*Professor Sedgwick's Discourse on the Studies of the University.*

imagination embodies them into that congregated form which seems best calculated for his purpose. Here it is that the memory is called into action; without precedents he cannot judge, without materials he cannot compose. Having now laid down his plan of operations, he applies to Nature to furnish him with the means of giving variety and originality to his work; but, to bind her to his purpose, he must have a settled knowledge of what he is seeking, he must have a quickness of eye, to take advantage of accidental arrangements, and a plan of methodizing his ideas, so as to be able to secure what he acquires, without which it will be impossible to produce a composition upon which he can calculate with any degree of certainty as to its effects or its stability, and what he paints one day he may obliterate the next. Composition not being an inherent quality of the mind, but the result of long acquaintance with the nature and arrangement of the compositions of others, it generally follows that all wayward and capricious compositions, established neither upon natural grounds nor upon the scientific arrangements of those who have preceded us, seldom outlive their inventors, for, pleasing only by reason of their novelty, they gradually lose their interest as that novelty vanishes; or, as Doctor Johnson expresses it, "the irregular combination of fanciful invention may delight awhile by that novelty, of which the common satiety of life sends us all in quest; the pleasures of sudden wonder are soon exhausted, and the mind can only repose upon the stability of truth."

Geometric forms in composition are found to give order and regularity to an assemblage of figures, for, in fact, we can have no idea of form without a portion of distinct shape, which, being arranged so as to make one part of the composition dependent on another for its completion or extension, produces an harmonious assemblage of lines, independent of the aid of light and shade or color. Groups of figures, without some appearance of geometrical form apparent to the eye, would produce a confused effect upon the spectator, in whose mind their appearance would indicate one subject as strongly as another, and look picturesque, when such character might be destructive of the impression intended to be produced. We have an excellent example of the influence of lines, or arrangement of parts, in the composition of "Attila," by Raffaello. We see on one side the rude, irregular descent into the Campania of Rome of the congregated tribes of the Goths and Vandals, leaving fire and desolation in their rear, and hurrying forward with savage wildness; opposed to which, enters the head of the Christian Church, with the ministers of the cross, calm, meek, dignified and upright, secure in the protection of heaven, whose messengers are seen descending, those noble warriors, St. Peter and St. Paul, spreading by their appearance terror and dismay into the hearts of Attila and his followers. And thus it is that the painter is enabled, by the assemblage of lines and forms, to produce upon the mind those sensations which the poet effects by a combination of words, or the composer of music by an arrangement of expressive sounds.

To simplicity and regularity of form we are indebted for the foundation of what is great and sublime, for, as Johnson expresses it, "sublimity is produced by aggregation, and littleness by dispersion." In architecture we find this a main cause of grandeur. Burke says: "Vastness in any object, infinity, succession and uniformity of parts in building, or any object in Nature, are all sources of the sublime, succession of uniform parts creating a kind of artificial infinite, and this may be the cause why a rotund has such a noble effect in building."²⁰ Having observed before that the architecture introduced into the works of Raffaele is of a simple and uniform character, it often seems to have been his design to carry out and extend the perspective and general form of his plan by the arrangement and position of his figures, such as we see in his "School of Athens"; and De Piles says: "He found, in some of his sketches, plans and scales of proportion." One or two memorandums which I found among the collections of drawings left to Christ Church, Oxford, by General Guise, seem to confirm this observation. The memorandums are written upon the side of sketches illustrative of the remarks, one of which I have given in Plate III, containing the ground plan, also the figures seen under the influence of perspective; the other, showing a circular arrangement of figures, such as we see in the lower part of the "Transfiguration," and in the "Death of Ananias," viz.:

Fig. 1.

²⁰ Addison, noticing how much simplicity of parts and greatness of manner in architecture affect the mind, quotes a passage of M. Feart's *Parallel of the Ancient and Modern Architecture*, "I am observing," says he, "a thing which in my opinion is very curious whence it proceeds, that in the same quantity of superficies the one manner seems

To Doctor Barnes, of Christ Church, I am indebted for the very great interest he took in enabling me to procure copies of any of the drawings. For the translation of the memorandums, and remarks upon the designs, I am indebted to the kindness of C. L. Eastlake, Esq., R. A., whose intimate knowledge of the compositions of Raffaele must give his observations additional weight.²¹

Independent of forms in composition most suitable to the subject, and arranged in the most natural manner, it is of the first consequence that the spectator ought to have such a view of the representation as will be most effective and uninterrupted. This obliges the artist to design those figures in the near part of the composition either in kneeling or stooping positions, that they may not intercept the figures behind, or to elevate those background figures by a higher plane, such as we see in the "School of Athens," the "Ananias," the "Incendio del Borgo," "Elymas the Sorcerer" and others. Or he may compose his piece upon the principle of the "Heliodorus," which, leaving the space vacant in the middle allows the eye of the spectator to range from the foreground to the distance without interruption; but, in

great and magnificent, and the other poor and trifling; the reason is fine and uncommon. I say, then, that to introduce into architecture this grandeur of manner, we ought so to proceed, that the division of the principal members of the order may consist but of few parts, that they be all great, and of a bold and ample rilievo and swelling; and that the eye beholding nothing little and mean, the imagination may be more vigorously touched and affected with the work that stands before it."

²¹ Translation of the memorandum on the side of the sketch representing circular composition:

"It is to be observed, that the first thing to be considered in an historical composition is where the point (*id est*, the spectator or spectator's eye) is to be placed, whether in the middle of the work or on one side, and so to determine its situation that the important figures be distinctly visible, and not concealed by others, and then begin the design. It is my opinion, confirmed by the practice of the most skillful men, that the mode explained by a drawing in the margin (is generally fittest), viz.: by contriving that those figures which are nearest to the point should present their backs, those further removed their sides, and so on in perspective, as if a circle were drawn and figures ranged round it, so should an historical composition be designed."

In illustration of the above, supposing an action to be represented in a circle, which would be quite natural if the object of attention were in the center, the spectator might either view it so as to be himself without the circle, or be supposed within it. In the latter case, the nearest figures would have their sides toward him, in the former their backs. Thus, when the spectator sees a semicircle, he completes the circle by his forming a part. This arrangement was adopted by the early Italian painters in their sacred subjects, and from its fitness was never abandoned by Raffaele. The Madonna di Foligno and the Dresden Madonna are remarkable examples, as in these pictures the St. Francis in the first, and the Pope Sixtus in the other, turn to the spectator who contemplates the work, and intercedes for them. The object, in short, by this semicircular arrangement was to mix up the spectator with the divine or sainted personages represented, and to make him feel in their presence.

But in more dramatic representations, in which the spectator might be interested but not a *party concerned*, Raffaele adopted the more picturesque arrangement, and after him this was unfortunately applied to *devotional* subjects. The drawing by Raffaele and the note recommend the picturesque arrangement, but as the whole works of the master are the best commentaries on his note, it may safely be affirmed, that he could not have intended this principle to apply to votive pictures; at present, indeed, in this country, when altar pieces, and especially mere assemblages of sacred personages, are rarely painted, the directions contained in Raffaele's note may be considered of universal application; it is only in the critical history of the art that they might lead to false conclusions.—C. L. E.

whatever form his composition develops itself, it is not more necessary to preserve such form in the strongest character than it is to give the spectator the most pictorial and comprehensive view of the subject. To enable him to judge of this quality, it will be necessary not only to lay down a ground plan, but to model the groups and individual figures, as we know to have been the practice of the best artists, from Michael Angelo and Raffaele down to the present, which will also, even though roughly executed, suggest the most natural effects of the light and shade.²²

Having decided upon his general form of composition, the several portions of the design next claim his attention. Those portions of most consequence to the illustration of the story are to be brought into notice, while other parts are made subservient, by being thrown into shade or more intercepted by their situations. Action and repose, masses convex and concave, lines regular or picturesque, spaces diminishing or increasing, are all to be combined in producing an harmonious result upon the eye and mind of the spectator.

We have noticed the peculiar properties of objects under the influence of perspective, viz.: circular forms becoming elliptical, spaces diminishing as they recede, objects intercepting those behind, while those on the foreground possess more detail and minutiae. These qualities are, therefore, to be engrafted upon the several portions of the composition, that it may have the appearance of truth, and enable the artist to give his work the firmness of Nature. In selecting examples illustrative of these remarks, it will be sufficient to give one or two of the most palpable, that the student

²²Translations of the memorandum at the side of the drawing given in Plate III, Fig. 1:

"This is the mode the painter should observe in composing his histories, so that the disposition of the masses should be unconstrained, as if the composition followed the advancing sight in order that the history or picture may be satisfactory to the spectator, and particularly to the experienced spectator. For if arranged without this rule, the said history will be put together defectively, this (viz.: the mode alluded to) being the true practice adopted by the most skilled and intelligent in the art. This will appear by consulting the works of those painters who are most famous; it is from their adherence to this rule that their works have been so much praised, and with the best reason, for this is the true principle."

The rule here alluded to, and which is sufficiently explained by the drawing which accompanies it, relates to *depth* of composition, as opposed to *superficial* or *basso relievo* composition; the mere surface is capable in variety, in height, and in width; but these varieties may exist while there is no variety whatever in the *plan*; the figures should therefore occupy the extent of the ground plan as completely as when brought to the surface they appear to occupy the height and breadth of the surface or face of the picture. Thus the three possible dimensions are occupied, the art being generally concealed by avoiding too regular a variety, and by doubling the masses somewhere. It only remains to be observed, that of the three applications of varied arrangement, that of the *depth* is the most strictly picturesque, because it most effectually gets rid of the flat surface, and suggests foreshortened limbs and figures, which are most to be met with in the latest works of Titian, Raffaele, and Michael Angelo; but Corregio, who was from the beginning devoted to *gradation* in forms (perspective) as well as *chiaroscuro*, was also an early lover of depth in composition, and often of foreshortening.—C. L. E.

Fig. 2 is part of a Roman basso relievo, from which Raffaele took the ceremony of the Sacrifice at Lystra.

Fig. 3 shows his adaptation of the ideas of others to his own purpose, being a figure of Masaccio's, which is converted into his St. Paul preaching. *Vide Reynold's Twelfth Discourse.*

may be made aware of their character, after which the whole range of composition, from the revival of painting down to our own time, will be rendered subservient to his investigation. As it is the character of spaces to diminish as they recede from the eye, we often find in the works of Raffaele and others this feature engrafted upon portions of their groups, as in Fig. 2, part of the "Cartoon of Ananias."

Fig. 2.

As it is the character of objects to intercept others more or less as they recede from the foreground, and as it is their character also to diminish and possess less of detail by their receding, we perceive this principle carried into the works of the great founders of the art in a variety of ways. We can trace it in the Greek and Roman basso relievos, in the figures and heads of Michael Angelo and Raffaele, and in the works of those who have collected from the great stores of Nature and art. The example, Fig. 3, is from Titian, part of a subject formerly in the Church of St. Nicola de Fiari, at Venice, now in Rome.

This regularity of diminution imparts to a work a character of simplicity, and, at the same time, assists the artist in giving depth to his composition, one figure acting as a background to the other.

This regularity of diminution not only assists in giving regularity and simplicity to a work, but enables the artist to carry the eye of the spectator into the depths of his composition. We also find it often employed in giving solidity and firmness to those heads or objects nearest the eye, one portion acting as a background to the other, giving to the whole that advantage which arises from the size, detail and firmness of foreground objects in

Fig. 3.

Nature. Fig. 4 is a further illustration of the same principle, being part of a design of Rubens, the picture of the "Woman Taken in Adultery," in the collection of Mr. Miles.

Fig. 4.

In following up the examination of composition into its component parts we find it necessary that they should all combine to produce one result upon the spectator. Raffaele, in extending his composition into the surrounding parts, employs his whole power in illustrating his story,

either by episodes which embellish and enrich it, or by figures expressive of the circumstances which have preceded it, or by conveying its effects after completion. Some we perceive engaged in relating the event to those entering, or unable to view it from their situation in the picture. Others of various ages and of different sexes, while they give variety to the work, enable him to develop its effect by a variety of expression and action, by extending the lines productive of such sensations, or lines by a union of several parts leading the eye by their direction to the principal point of the story, or giving bulk and strength to the foreground figures. Add to these, figures repeating by their form the principal points, so as to give those richness by extending their shape, or productive of harmony by their action and expression, emanating from those of the principal actors. These remarks more immediately apply to the mental portion of the work, and of works of the highest department in the art; but many of them also may be made applicable to other branches, such as the combining of several heads for the purpose of preserving a mass of flesh color, and to prevent spottiness in the effect; or giving pleasure to the eye by the forms taking pleasing shapes; or assisting deception by lines combining to give strength and magnitude to the foreground objects, or diminished delicacy to the more distant. In short, a knowledge of the higher requisites of painting is of the greatest importance in all the departments, whether in giving dignity to portraiture, such as Titian's, or to landscapes, such as his also, and those of Annibale Carrache, Salvator Rosa or Nicola Poussin. Toward gaining perfection in poetry we find writers recommending this course of investigation. Addison says: "A poet should be very well versed in everything that is noble and stately in the productions of art, whether it appears in painting or statuary; in the great works of architecture, which are in their present glory, or in the ruins of those which flourished in former ages. Such advantages as these help to open a man's thoughts, and to enlarge his imagination, and will, therefore, have their influence on all kinds of writing, if the author knows how to make right use of them."²³ Reynolds recommends "that all the inventions and thoughts of the ancients, whether

²³ The same remarks which Doctor Johnson applies to poetry may be here made use of to indicate the sources of instruction for those who aspire to the higher walks of painting: "By the general consent of critics, the first praise of genius is due to the writer of an epic poem, as it requires an assemblage of all the powers which are singly sufficient for other compositions. Poetry is the art of uniting pleasure with truth, by calling imagination to the help of reason. Epic poetry undertakes to teach the most important truths by the most pleasing precepts, and therefore relates some great event in the most affecting manner. History must supply the writer with the rudiments of narration, which he must improve and exalt by nobler art, must animate by dramatic energy, and diversify by retrospection and anticipation; morality must teach him the exact bounds and different shades of vice and virtue; from policy, and the practice of life, he has to learn the discrimination of character, and the tendency of the passions, either single or combined; and physiology must supply him with illustrations and images. To put these materials to poetical use, is required an imagination capable of painting Nature and realizing fiction. Nor is he yet a poet till he has attained the whole extension of his language, distinguished all the delicacies of phrase, and all the colors of words, and learned to adjust their different sounds to all the varieties of metrical modulation."—*Johnson's Life of Milton.*

conveyed to us in statues, bas reliefs, intaglios, cameos or coins, are to be sought after and carefully studied. The genius that hovers over these venerable relics may be called the father of modern art. The collection of the thoughts of the ancients which Raffaele made with so much trouble is a proof of his opinion on this subject. Such collections may be now made with much more ease by means of an art scarce known in his time. I mean that of engraving, by which, at an easy rate, every man may now avail himself of the inventions of antiquity." He also recommends taking another view of the same figure, either by modeling it or setting a person in the same attitude. This will give the student a quick knowledge, wherein consists the beauty and character of the different great masters; or by altering it to suit his subject, such as the figure of "St. Paul," by Masaccio, introduced in "Paul Preaching," by Raffaele, or the "Sacrifice at Lystra," Plate II. To conclude, I can only repeat the words of Sir Joshua Reynolds: "Study, therefore, the great works of the great masters forever. Study as nearly as you can in the order, in the manner and on the principles on which they studied. Study Nature attentively, but always with those masters in your company. Consider them as models which you are to imitate, and at the same time as rivals, with whom you are to contend."

ARRANGEMENT.

Arrangement, though not partaking of that high quality which distinguishes composition, yet, nevertheless, embraces a knowledge of those characteristic features to be found pervading the general appearances of Nature, and to be employed in giving a truth and vigor to assemblages of lines, shades and colors. All objects whose images enter the eye are subject to certain laws, which regulate their form, and assign to them situations in the picture which such forms indicate, and which, having been often observed, have obtained a general consent as to their truth and natural character. To know, therefore, these arrangements observable in Nature is absolutely necessary, that we may employ such knowledge in producing the same results in painting, especially as we find the works of those artists who have thus combined their skill in arrangement give the greatest pleasure to the eye of the spectator. This gratification arises from the several images being depicted in their most characteristic features. In looking abroad upon the face of Nature, for example, in a wide extent of country, where the eye can take a comprehensive observation, we notice toward the horizon a multitude of parallel lines stretching across the landscape. The lines crossing them, being foreshortened, lose their breadth, while the perpendicular lines of objects lose their consequence owing to their diminution from distance; but, as they approach toward the foreground, we perceive that they gain their ascendancy and become more rugged in the outline and stronger in effect from their shadowed portions being larger and darker, owing to their nearness to the eye. Being acquainted with these

line from the foreground to the distance, assisting the perspective by such means as to lead the eye into the depths of the composition, while it gives the appearance of truth and simplicity of natural diminution. See Plate IV. I have given an additional Plate IV*, part of the "Dispute of the Sacrament," where this disposition is more evident. Independent of this mode of arrangement being of use in giving uniformity to irregular portions of a composition, it is of great advantage in directing the eye to the principal parts of the picture by means of the perspective appearance of the line. Also, by producing such arrangement either by the base of the group or the introduction of accidental objects to assist such deceptive diminution, we counteract the effects of false perspective which the base line of the group sometimes produces, for, in conducting the design, the heads and upper portions only of the composition are attended to in the first instance, without reflecting how the parts which come in contact with the ground will appear when terminated according to their true position in the picture.

A knowledge of arrangement enables us yet further to heighten the gratification of the spectator by engrafting upon the work those forms found in the compositions of the most celebrated artists. This knowledge it is which enables the poet to give so pleasing and vivid descriptions of scenery, often gratifying the imagination more than an actual survey of the scene he describes. As Addison remarks, "He takes indeed the landscape after her, but gives it more vigorous touches, heightens its beauty and enlivens the whole piece, that the images which flow from the objects themselves appear weak and faint in comparison with those that come from the expressions." A knowledge of arrangement enables the artist to follow up and extend lines and forms, often only hinted at in Nature. Those parts which possess a strong local character he preserves as leading points to an harmonious assemblage of lines, while portions possessing beauty he enshrines in masses of repose, or surrounds them with forms and colors which add to their effect upon the spectator. Even in the wild, rugged scenes of savage grandeur, where rocks, trees and clouds combine in awful magnificence, a knowledge of arrangement is necessary to preserve this earthquake-like appearance. In the works of Salvator Rosa the student will find many examples of this mode of arrangement, every part of the work uniting "in dreadful harmony." To acquire a knowledge of beautiful scenery, founded upon aërial perspective, or an agreeable assemblage of lines and

whose zeal and authority is represented in Onias. He appears in a litter, borne by his grooms, in the manner in which he was accustomed to repair to the Vatican to view this work." In these heads Raffaele has given the portraits of his pupils, M. Antonio and Julio Romano, with the Pope's secretary, etc. For this anachronism Raffaele has been blamed by the critics, without considering that it was the only way the painter had of connecting the Jewish with the Christian church, and exemplifying the temples of both as the sacred depositories for those funds which were to be given out to the widow and the orphan poor. Without detracting from the great merit of Raffaele, we may rest assured that these works were of too much importance not to be watched with the greatest vigilance, and assisted in their moral efficacy by all the learning within the walls of the Vatican. Those who wish to see how close Raffaele often kept to the history, may examine the whole story in II Maccabees, Chapter III.

forms, he ought to study the arrangements of Claude, Cuypp and those of Turner, whose works are filled with the various qualities which constitute the true poetry of painting, and the power of giving extent and magnificence in the highest degree.

HARMONY.

Harmony in painting is the connection and agreement of one part with another, either as regards form, light and shade or color. This agreement proceeds either from a succession of the same forms in different degrees of distinctness, such as arise when we cast a stone into water, producing a succession of undulating circles, or by one form depending upon its adjoining for its completion and unity, as is the case in poetry;²⁵ or the harshness of isolated forms may be broken down and harmonized with the whole by their being hinted at or faintly repeated in various portions of the picture.

FORM.

Burke, speaking of beautiful forms, says: "As perfectly beautiful bodies are not composed of angular parts, so those parts never continue long in the same right line. They vary their direction every moment, and they change under the eye by a deviation continually carrying on, but for whose beginning or end you will find it difficult to ascertain a point." All authors from Aristotle to De Quincey having treated of the affections of the mind as if the avenues to each sensation were the same, it will, perhaps, lead us to a more clear definition of the properties which belong to vision exclusively, by confining the observations on form, shade or color to their effects upon the eye. As the forms of all objects enter the eye through a circular aperture, those objects containing a similar continuity of form fall most agreeably upon the organ of vision, and are seen, as it were, at a single glance, while objects possessing sharp angles seem less in harmony with the flow of light which accompanies their entrance, and require repeated examinations to gain a knowledge of their exact form. For example, if a circle be presented to the eye, we are incontinently carried around the whole circumference, whereas, when we look upon a square or cubical form, it requires four separate examinations, each producing a separate effort. Now, as the images of all objects are not only viewed through a circular aperture, but are also received upon a circular surface, and as the rays

²⁵ Doctor Johnson says, "As harmony is the end of poetical measures, no part of the verse ought to be so separated from the rest as not to remain still more harmonious than prose, or to show, by the disposition of the tones, that it is a part of a verse." Further on he remarks, "When a single syllable is cut off from the rest, it must either be united to the line with which the sense connects it, or be found alone. If it be united to the other line, it corrupts its harmony; if disjointed, it must stand alone, and with regard to music be superfluous; for there is no harmony in a single sound, because it has no proportion to another."—*Rambler*, No. 90.

PLATE IV

HELIGDORUS.

See Vol. 3, p. 100.

by which such images are conveyed fade imperceptibly as they depart from the center of vision, these may be some of the causes why circular or undulating forms fall most agreeably upon the eye, especially if we consider that the organ itself moves, as it were, in a circular motion, by means of its muscles, or, as it is commonly termed, the ball and socket.²⁰ There are other reasons why circular forms are most agreeable to the eye, arising from an association of ideas, such as the soft, circular forms of children and youth, compared with the rigid and angular forms of age; or flowing, undulating lines, conveying a greater idea of motion than lines crossing each other in abrupt opposite directions. Harmony consisting of a certain proportion of one part with another, no figure or shape can be harmonious or agreeable unless this arrangement is complete, so as to produce a unity to the eye, or a balance of one portion with another, such as the preponderance of perpendicular lines being counteracted by those running in a horizontal direction, or oblique lines antagonized by opposite obliquities, convex by the presence of concave, all mingling together in regular adjustment, as in music we find harmony produced by a combination of sounds different in themselves, yet affecting the mind, through the medium of the ear, with one result. Aristotle, in his "Treatise on Poetry," says: "Beauty consists in magnitude and order, but no animal, or other thing, can be beautiful that is either too small or too large for the eye to take cognizance of its several component parts at once, as in that case the whole, or unity, is lost to the spectator." That extension of form so conducive to harmony, and productive of an agreeable effect upon the eye, is often taken advantage of in regulating the boundary line to a composition; thus, we often see a single head of a child, or a group consisting of an assemblage of curved lines, reach the eye more agreeably through a circular frame, as in that case the sensations which arise from such a combination are not disturbed

* "One of the many points of superiority which the eye possesses over the ordinary camera obscura is derived from its spherical shape adapting the retina to receive every portion of the images produced by refraction, which are themselves curved: whereas, had they been received on a plane surface, as they usually are in the camera obscura, a considerable portion of the image would have been indistinct. This spherical form is preserved by means of the firm membranes which protect the eye, and which are termed its *coats*; and the transparent media which they enclose, and which effect the convergence of the rays, are termed the *humors of the eye*. There are in this organ three principal coats and three humors, composing altogether what is called the *globe of the eye*. The outermost coat, which is termed the *sclerotica*, is exceedingly firm and dense, and gives to the globe of the eye the mechanical support it requires for the performance of its delicate functions; it is perforated behind by the optic nerve, which passes onward to be expanded into the retina. The sclerotica does not extend farther than about four-fifths of the globe of the eye, its place in front being supplied by a transparent convex membrane, called the *cornea*, which is more prominent than the rest of the eyeball; a line passing through the center of the cornea and the center of the globe of the eye is called the *axis of the eye*. The sclerotica is lined internally by the *choroid coat*, which is chiefly made up of a tissue of blood vessels for supplying nourishment to the eye. It has on its inner surface a layer of a dark colored viscid secretion, known by the name of the *pigmentum nigrum*, or black pigment. Its use is to absorb all the light which may happen to be irregularly scattered through the eye, in consequence of reflection from different quarters; and it serves, therefore, the same purpose as the black paint with which the inside of optical instruments, such as telescopes, microscopes and camerae obscuræ are darkened. Within the pigmentum nigrum, and almost in immediate contact with it, the *retina* is expanded, forming an

or interrupted. So, likewise, the sight may be conveyed with greater pleasure, and with an increased perspective effect, through a square or oblong aperture, by having the horizontal and perpendicular lines of the frame repeated as they depart from the eye, in diminished lengths and strengths and magnitude, as in Plate V; also in the curved and horizontal lines of the

Fig. 1.

Reynolds

architecture of the "School of Athens," the "Heliodorus," etc. This mixing up the frame or opening with the work is often of the utmost importance, even when extended to the effect of light and shade and color, as it breaks

exceedingly thin and delicate layer of nervous matter, supported by a fine membrane. More than three-fourths of the globe of the eye are filled with the *vitreous humor*, which has the appearance of a pellucid and elastic jelly, contained in an exceedingly delicate texture of cellular substance. The *crystalline humor*, which has the shape of a double convex lens, is formed of a denser material than any of the other humors, and occupies the fore part of the globe of the eye, immediately in front of the vitreous humor, which is there hollowed to receive it. The space which intervenes between the lens and the cornea is filled with a watery secretion called the *aqueous humor*. This space is divided into an anterior and posterior chamber by a flat circular partition, termed the *iris*. The iris has a central perforation, called the *pupil*, and it is fixed to the edge of the choroid coat by a white elastic ring, called the *ciliary ligament*. The posterior surface of the iris is called the *uvea*, and is lined with a dark brown pigment. The structure of the iris is very peculiar, being composed of two layers of contractile fibers; the one forming concentric circles, the other disposed like radii, between the outer and inner margin. When the former act, the pupil is contracted; when the latter act, the breadth of the iris is diminished, and the pupil of course is dilated. By varying the size of the pupil, the quantity of light admitted into the interior of the eye is regulated and accommodated to the sensibility of the *retina*. When the intensity of the light would be injurious to that highly delicate organ, the pupil is instantly contracted, so as to exclude the greater portion; and on the contrary, when the light is too feeble it is dilated, in order to admit as large a quantity as possible. The iris also serves to intercept such rays as would have fallen on parts of the crystalline lens less fitted to produce their regular refraction."—*Doctor Roget's Bridgewater Treatise*.

down that harshness which otherwise attracts the eye while examining the work contained within it.²⁷

CHIARO OSCURO.

That harmony which is produced by *chiaro oscuro*, or by the means of black and white, independent of color, depends upon the quantities of light and dark employed and the disposition of them, sometimes meeting in extremes of opposition, in other portions gliding away with imperceptible softness into undefined spaces, the light sometimes falling on combined objects, giving out a faint halo around the group; in some instances darting out through the dark masses of shadow in sharp defined shapes, creating by their whole arrangement that mixture of harsh and tender gradations observable in Nature. The power of producing a variety of pleasing sensations upon the eye mainly rests on the conduct of the *chiaro oscuro*. Objects are rendered either strong or delicate, according as they advance or retire on the perspective plane of the picture. Parts are forced upon the spectators attention by their clear-defined character, and assisted from contrast by groups of indistinct images imbued with the properties of middle tint. The quantities of dark that are to be allowed to interrupt or pass within the boundaries of the masses of light, or the size of those portions of light which are found within the dominion of shade, either giving depth to it by contrast or destroying its preponderance by producing a union with the light, are entirely at the guidance of the artist, whose skill is shown in the management of this difficult department, it being entirely under the influence of an educated eye. Neither am I aware that its beauty is felt, unless by those whose tastes are refined by long contemplation of the finest works of those who have excelled in the different branches of painting. We know, as is the case in music, though the ear is capable of acquiring a knowledge of twenty thousand simple sounds, all differing in tone and strength,²⁸ yet this power of distinction is not entirely in the construction of the organ, but arises from long observation. Sir Charles Bell says: "That this variety of sensation does not entirely

"This harmonious combination of the picture with its frame induces many artists to finish their works after being framed, thereby assisting them in giving a greater force and deceptive appearance to the whole; for though this deceptive appearance is argued against by some, as belonging only to the infancy of the art, and not applicable to the higher walks of painting, yet the mind cannot be reached through the medium of the eye unless this deception is carried out to a considerable extent; neither, as others reason more subtly, is it to be regarded as a diminution of our gratification. Dioramas and panoramas are both pleasing illusions, on this principle alone. De Quincy says, "When the painter includes within a narrow compass a vast extent of space, when on a flat surface he bears me through the far off regions of the infinite, and makes the air and light appear to circulate around forms devoid of relief, I find delight in abandoning myself to his illusions. But, nevertheless, I would not have the frame absent; *I would wish to know that what I see is in fact but a piece of canvas on a perfectly plane surface.*"—*Essay on Imitation in the Fine Arts, Chap. XIV.*

depend upon the structure, but is the operation of the sense and intellect conjointly, appears from the long experience which is requisite to give this perfection. Nature is bountiful in providing the means of simple and acquired perception, but the latter is the result of long experience and continued effort, though we have lost the feeling of its being a voluntary effort." We have already noticed some of the most evident properties belonging to the application of shadow, by which we can easily perceive that a mere outline of a group of figures, or a variety of objects, lies like a map under the eye; but, by the judicious application of shadow passing among the several forms, they rise up, and assume their various situations according to their relative distances from the eye of the spectator. We can easily carry our imagination further, and assign a reason why some portions are to be subdued, and others brought into notice; but the art of combining the whole, in a harmonious mass of *chiaro oscuro*, can be acquired only by long investigation into the principles of those who have excelled in this captivating and imaginative art. Before entering into an examination of this quality, so productive of pleasure, viewing its effect in painting, it will be necessary to examine its cause, and where it exists in natural imagery, the only sure source on which we can build with certainty. When we direct our eyes to any particular object, we observe it distinctly defined, while the surrounding objects produce a fainter impression on the retina. We also perceive, on examination, that we often have been attending to the impression made upon one eye only, either from its more favorable position or from a superior goodness in the organ itself. Nevertheless, a number of lateral images are indistinctly hinted at upon the retina of the other, which, by their softness, give a precision to the object of our attention, from contrast, and amuse and assist the imagination from a variety of circumstances. We know, also, that there are two representations, one painted in each eye, and, though they form but one in the mind, yet we cannot shut out entirely those hints which may be conveyed to the fancy from the faintest impressions unconsciously attended to. Add to which the eye, from fatigue in looking at any object attentively, naturally turns for repose to soft masses of shadow and indistinctness. Without following up this subject too minutely, these may be some of the reasons why particular arrangements of *chiaro oscuro* please the eye more than others.²⁹ We also find that, along with indistinctness, a repetition of form and a completeness or unity of shape are very much under its influence,

²⁹ This indistinctness also pleases the eye of the spectator, in the same way in which an unfinished sketch gratifies his imagination; for as every one has different notions of beauty of form, he is left to fill up the images, and shape them to his own taste: it also pleases the mind, as it gives a sort of creative power, such as is felt when looking upon a discolored wall, or into the dying embers of a fire. Burke even considers it conducive to sublimity; he says, "Even in painting, a judicious obscurity in some things contributes to the effect of the picture, because the images in painting are exactly similar to those in Nature; and in Nature, dark, confused, uncertain images have a greater power on the fancy to form the grander passions than those have which are more clear and determinate."—*Essay on the Sublime and Beautiful*.

as may be observed by trying an experiment as noticed in note 30,³⁰ which will suggest others to the imagination. But whatever way the student takes to get an insight into this great charm of painting, either in arranging his composition so as to suit any particular effect of light and shade, or in trying various means of distributing light and shade over his design, let him carefully watch, both in Nature and in art, its various combinations, and endeavor to find out the latent cause of its beauty. As the etchings of Rembrandt embrace this quality in the highest degree, from a mere outline to the most extensive depth of shadow, they ought to be constantly before him when he has it in his power. They ought to be viewed in every direction, to enable the eye to get acquainted with the proportions of light, dark and half-tint. He ought also to engraft the scheme of *chiaro oscuro* on designs of his own, that the harmony which exists in these wonderful productions may be transferred, if possible, into new inventions, as in Plate VI.

HARMONY OF COLOR.

The power of combining sounds whose united influence shall call into existence, through the medium of the ear, those latent seeds by which the violent or tender passions are excited is too well understood to require explanation. That there exists the same sources of enjoyment in the human mind which are capable of being awakened through the medium of the eye is equally certain, otherwise the painter could not produce, by a combination of color, those effects which surprise or delight the spectator. Locke describes colors as only ideas of the mind apprehended by the imagination, and not qualities that have any existence in matter. Newton says colors have their origin in the different refrangibility of the rays of light, and are not received from reflections or refractions from natural bodies. Without, however, entering too minutely into the philosophy of colors, it will be necessary to inquire what are the colors which affect the eye most, or from what arrangement harmony arises. We observe that children and rude nations³¹ are most attracted by strong colors, from the

³⁰ If we take a pen and sketch in a row of buildings, trees, etc., running from one side to a point of sight in the center, blotting in shadows broad and dark on the near objects, and while the ink is wet fold the paper across the point of sight, so as to take off an impression on the opposite side, the eye is not only gratified by a greater mixture of sharp and soft portions, but by a greater unity, and balance of parts, one side with another, and a repetition of the sky line with the lines of the ground; or if we draw in a group of trees and fold the paper across at the base of their stems, so as to take off a faint impression, as if reflected in water, the same agreeable sensation will be produced.

³¹ It is evident that gay colors of all kinds are a principal source of pleasure to young children, and they seem to strike them more particularly when mixed together in various ways. Whether there be anything in colors which corresponds to the harmony of sound may be doubted; if there be, it must, however, admit of much greater latitude than the harmony between sounds, since all mixtures and degrees of color, unless when the quantity of light overpowers the eye, are pleasant: however, one color may be more so originally than another. Black appears to be originally disagreeable to the eyes of children; it becomes disagreeable also very early from associated influences. In adults, the pleasures of mere colors are very languid, in comparison of their present aggregates

excitement which they produce. De la Hire says: "The different degrees of excitement produced by colors may be observed by keeping the eye shut, after looking at the sun or any luminous object, for the image left upon the retina will be first red, then yellow, then green, and last of all blue." We also perceive that the effect produced by strong colors may be increased or diminished by bringing them in contact with others of an opposite hue. Large portions of strong blue coming in contact with red or white (for we find the ground color often a great cause of opposition) affect the eye in a different manner from what the same colors produce when in smaller quantities; or on a ground of a neutral tint, such as we see in the specimens found in the Egyptian tombs, contrasted with the same colors distributed over a Persian shawl. In the latter case the rays coming to the eye from every separate color cross each other, so as to produce an agreeable harmony.³² In the former case one color makes too strong an impression on the eye to be obliterated easily, impressions remaining of long or short duration, according to the intensity of light or brightness of the object producing them. Reynolds mentions three modes of harmony existing in the arrangement of colors; one where the colors are of a full and strong body, such as we find in the works of Raffaele, and which he denominates the Roman manner; another the Bologna style, which mixes several colors together so as to produce a general union in the whole without reminding you of the original colors of which they are composed, and which is carried to the greatest perfection in the small works of the Dutch school; the third is the Venetian, where the brightest colors are admitted, with the two extremes of warm and cold hues, and the whole reconciled and harmonized by being dispersed over the picture, presenting to the eye that sensation arising from a bunch of flowers. Each method seems to have its peculiar province allotted to it, corresponding to the subject or style of composition in the design, and *chiaro oscuro*, according as they depart more or less from common representations of Nature, or retain an entireness or severity of outline. Harmony arising from a corresponding agreement of the several

of pleasure formed by association. However, the original pleasures of mere colors remain in a small degree to the last, and those transfused upon them by association with other pleasures (for the influence is reciprocal without limits) is a considerable one—so that our intellectual pleasures are not only at first generated, but afterwards supported and resuscitated in part from the pleasures affecting the eye, which holds particularly in respect of the pleasures afforded by the beauties of Nature, and by the imitation of these which the arts of painting and poetry furnish us with."—*Hartley on Man, Sense of Sight.*

³² Sir Isaac Newton remarks, that when the refrangibility of any particular ray produce a certain color, he found it impossible to change that color, if sufficiently large; he could subdue its intensity, by intercepting its rays by colored mediums, but could not change it in *specie*. (We find this, which is a kind of glazing, was even practiced by the ancients.) He found a transmutation of colors might be made by a mixture of different kinds of rays, but in such mixtures the component colors themselves do not appear, but by their mutually allaying each other, constitute a middle color; and, therefore, if, by refraction, the different rays be separated, colors will emerge different from that of the composition. Thus blue and yellow powders finely mixed appear green to the naked eye, and yet the colors of the component particles are not thereby really changed, but only blended; for when they are viewed with a microscope, they still appear blue and yellow.—*Priestley's Remarks on Newton's Optics.*

parts, we can easily imagine a suitableness in the coloring to preserve such unity. In the early stages of painting, when the figures possessed a dry, continuous outline, we find the colors laid in strong and bright, so as to give relief unconnected with the effect of aërial perspective. As the art advanced, we find colors made use of in the character of *chiaro oscuro*, and, when foreshortening and perspective effect occupied a large share in the conduct of the work, we perceive that color became more subordinate, and the outline, light and shade and color assimilated with each other in producing an effect upon the spectator, arising from neither having a preponderance in claiming his attention. In entering upon a diffuse examination of the foregoing remarks, each separate division would require a lengthened essay to particularize the way in which the eye receives delight from the various modifications of color. A work of this brief description can do little more than point out where the various examples are to be met with, and how they are modified and arranged to harmonize with those sensations which exist in the mind, and cannot be altered or diverted into other channels by the caprice or false taste of any one. I would fain hope I have gone further. I have endeavored to prove that those sources of enjoyment which lie dormant in the human mind, and which through the sense of sight are vivified and called into operation, can only, by the cultivation of that sense, be productive of pleasure.³³ I have also endeavored to prove the great utility of the education of the eye as a means of general instruction, giving employment to thousands, while it opens those avenues to science which, even to the great power of language, remain as "books sealed and fountains shut up."

STUDYING FROM NATURE.

Objects drawn from Nature possess a very characteristic difference from those drawn from the combinations of fancy, or from those images presented to the imagination. We find in sketches from Nature many minute circumstances, a truth and precision, a variety and beauty, that objects drawn from memory, or those images under the guidance of the mind only, have no pretension to. The latter possess the general appearance merely like the confused character of Nature presented to indistinct vision, or, if made out with detail, the minutiae contain a select set of touches or forms, become agreeable from habit, which constitutes mannerism. Such imperfections can be avoided only by having accustomed the eye in the

³³ Addison remarks, that a man of polite imagination is let into a great many pleasures that the vulgar are not capable of receiving. He can converse with a picture, and find an agreeable companion in a statue. He meets with a secret refreshment in a description, and often feels a greater satisfaction in the prospect of fields and meadows than another does in the possession. It gives him, indeed, a kind of property in everything he sees, and makes the most rude uncultivated parts of Nature administer to his pleasures: so that he looks upon the world as it were in another light, and discovers in it a multitude of charms that conceal themselves from the generality of mankind.—*Spectator*, No. 411.

first instance to a scrupulous exactness in delineating objects from Nature, as one or two parts left out may destroy the richness and variety of lines, and an unequal proportion of the forms may deprive the copy of the truth and beauty of the original. These peculiarities are also to be examined and contemplated upon, that this character may be engrafted upon works of imagination. Reynolds says: "I very much doubt whether a habit of drawing correctly what we see will not give a proportionate power of drawing what we imagine."

To educate the eye to accomplish this it is necessary, in the first instance, to select such objects as are simple in their forms, that the eye may perceive them distinctly, and make them gradually give place to others more complicated, to fit the eye and the hand to a variety of lines. It is also of the first importance that the drawings be made sufficiently large, that an opportunity may be given for filling up the various spaces with the minute parts, and also to prevent the hand acquiring a cramped or little manner of drawing. It is also of equal importance that the object chosen for representation be such as can be compared with the original, to test the exactness of the copy. Much injury and fallacy has arisen from not attending early to a proper mode of study. How often, for example, do we perceive in those who draw landscapes the incapability of drawing the human figure with any degree of correctness. This arises entirely from careless drawing in the first instance. A tree may be imperfectly drawn, yet look sufficiently true to please most spectators; but the human figure possesses proportions, the want of which can be easily detected; but, had we an opportunity of comparing the tree with the original in Nature, we should discover the resemblance to be equally imperfect, for an eye capable of drawing correctly can draw any object presented to it, whether simple or complicated. Educating the eye in the first instance in the elements of lineal and aerial perspective gives it a clearer insight into the causes of the changes of form and shadow observable in all objects, while drawing from the objects themselves in place of copies gives it a power of perception³⁴ and a knowledge of embodying forms in composition quite unattainable by any other method. When we consider that the images of objects dwell upon the retina only while the eye is directed to them, and, like the pictures on the table of the camera obscura, instantaneously vanish when we turn to something else, we may perceive the necessity of keeping each several part sufficiently long under examination before delineating it,

³⁴ Doctor Jurin observes, that the eye, as well as other parts of the frame, acquires strength and perfection from frequent use of the muscles, as is noticed in the eyes of sportsmen, travelers, sailors, etc., who see better at long distances; while those whose professions lead them to close examination, see better at small distances: but drawing from Nature, especially distant prospects, perfects the eye in both these extremes, as we have to carry the vision to examine objects far off, and immediately transfer it to a near examination on the paper close to the eye, for this organ is wonderfully provided with the means of changing the crystalline lens, both for pushing it forward from the retina, and rendering it more convex when viewing near objects; and also for drawing it more within the vitreous humor and rendering it flatter when examining distant objects. —See *Doctor Jurin on Distinct Vision*, and *Potterfield on the Eye*.

that the mind may be put in possession of its form and color, so as to retain it in the memory not only while copying it, but with such an impression as will improve and enrich the imagination with a multiplicity of imagery. Those who advocate the study of Nature, without educating the eye in the first instance, are not aware that it is the superficies of things only which present themselves to the outward vision, and, without a monitor to direct, the art would always be in its infancy.³⁵ A tree drawn by a beginner represents a flat image, like a plant or a piece of sea weed dried between the leaves of a book. A figure represents but the section of one, for even if the foreshortened portions were perceived, he is incapable of giving them the perspective appearance, or lifting it from the ground by means of the application of light and shade. The first restorers of the art in Italy advanced but little beyond the flat brasses that supplied them with the means of design. Even in the hands of Giotto and Masaccio foreshortening was but little attended to, and then from a want of light and shade to give the parts their relative situations, looked cramped and feeble. It was not till the master minds of Leonardo da Vinci and Michael Angelo grappled with the subject that difficulties disappeared. Those portions of the figure were no longer represented in profile views, but advanced or receded from the spectator, and whole groups, in place of looking like a continuous frieze, were turned around and sunk in the depths of the composition by means of lineal and aerial perspective. Raffaele, by taking advantage of the works of those who had preceded him, carried the art to a state of perfection which the study of Nature, notwithstanding his constant application to her, never could have enabled him to achieve. The contemplation of the fine works of antiquity created elevated visions of ideal composition, while his constant application to Nature for the details enabled him to give a reality and identity to the creations of his imagination. Without the eye being made acquainted with the beauties of those who have advanced the art to its present state, either progressively, by studying the best works, or by commencing a course of drawing from antique sculpture, it will be impossible to select what is beautiful in Nature, or be able to choose one point of view more interesting than another. It will also be impossible to combine a variety of objects, unless we have a knowledge of those principles upon which the various works are constructed that have given satisfaction; for, though, as is the case with music, the varieties are endless, yet the science is simple, and to be perceived by those who investigate the arrangements of harmony. He who attempts to study from Nature unassisted by education, in the first instance, will find himself often mistaken

³⁵ "Cicero remarks, that not to know what has been transacted in former times, is to continue always a child. If no use is made of the labors of past ages, the world must remain always in the infancy of knowledge. The discoveries of every man must terminate in his own advantage, and the studies of every age be employed on questions which the past generation had discussed and determined. We may with as little reproach borrow science as manufactures from our ancestors; and it is as rational to live in caves till our own hands have erected a palace, as to reject all knowledge of architecture, which our understandings will not supply."—*Doctor Johnson*.

in his results; neither will he arrive at so certain or so expeditious a method of delineating objects with truth and feeling, as he will be continually in dread of falling into error. Leonardo da Vinci says: "Theory is the great director of experiment, the only interpreter of the works of Nature, which is never wrong. It is our judgment which is sometimes deceived, because we are expecting results which experiment refuses to give. We must consult experiment and vary the circumstances till we have deduced general rules, for it alone can furnish us with them, and general rules direct us in our inquiries into Nature and the operations of art. They keep us from deceiving ourselves and others by promising ourselves results which we can never obtain."

This is the experience which enables the artist to select and combine, to leave out or add to the various appearances presented to his eye. Why is it, for example, that the portrait painter, when his sitter is placed before him, turns the head, first to one side, then to the other, and contemplates it also under a variety of effects of light and shade? It is to observe the best arrangement of the features, to select that view of the head which develops the greatest character and the most beautiful points. To enable the eye to make these selections it is necessary to combine with the study of Nature the study of the works of those eminent men who have preceded us. The works of Titian will convince the student how much quiet grandeur is to be produced by simplicity and breadth. The works of Vandyke exemplify the art of arrangement and a beautiful distribution of the features, also the art of uniting the several parts by means of light and shade, or disposition of the hair, or subordinate accessories. This power of planning out or adjusting the several parts to the best advantage may be acquired by long contemplation of the various combinations observed in Nature; but a reference to the etchings by Vandyke, and the prints after him, will facilitate the student in his inquiries. We know that Rubens advised Vandyke and Valasquez to study the works of Titian as the best means of arriving at perfection in portrait painting; and so uniform has been this mode of acquiring correct knowledge that the works of Reynolds or of Lawrence may be studied as the best means of shortening labor, these artists having adopted the principles existing in the works of their great predecessors so as to suit the fashion and taste of their own times, but along with such study bringing their own genius to the incessant contemplation of Nature; for, as Bacon observes, "to spend too much time in studies is sloth; to use them too much for ornament is affectation; to make judgment wholly by their rules is the humor of a scholar. They perfect Nature, and are perfected by experience, for natural abilities are like natural plants that need pruning by study, and studies themselves do give forth directions too much at large, except they be bounded in by experience."

The art of studying from Nature may be, therefore, considered as implying that which we perceive through the medium of our own eyes, and those things made apparent through the spectacles of other men, for seeing

Nature does not merely mean seeing the exact length and breadth of any object, but means the power of discerning her beauties and defects, those portions which are to be preserved and the mode of heightening their effect upon the eye of the spectator, and the several parts which operate detrimentally to the general arrangement of the whole, which are to be intercepted by other objects, or left out entirely.⁸⁰ For, as the accidental combinations of Nature are thrown together uncontrolled by the likings or dislikings of any one, the greatest study is necessary, so as to form a complete work which shall possess all the appearance of chance combined with the most skillful adjustment; for example, what a variety of appearances do not the effect of light and shade produce upon the same scene, viewed at various times of the day, or seen under the advantages or disadvantages of accidental arrangements of objects. This power of discernment is, therefore, to be acquired by the study of the works of those who have excelled in the different departments of the art, and afterward perfected in searching out and contemplating the beautiful combinations which lie scattered in the endless varieties of Nature. This mode of study alone can enable one artist to surpass another in the power of selection, and the same scene, bald and ineffective in the hands of one, may be rendered full and of rich effect by another who has watched a more favorable arrangement, and who has followed up and completed the various hints derived from accidental combinations, as in Plate VII, Figs. 1 and 2.

Thus the study of Nature is conducive to perfect the education of the eye, by careful investigation of her works ourselves, and by being able to comprehend and appreciate the works of those who have most successfully studied her; and this not in a lukewarm or superficial manner, but with that noble enthusiasm which stimulated the genius of Michael Angelo through a long life, and, even when deprived of the power of vision from old age, made him order his attendants to convey him to the gardens of the Medici, that he might feel and pass over with his hands the glorious remains of Grecian art on whose statues he had founded his own education.

⁸⁰ Nothing can be so unphilosophical as a supposition that we can form any idea of beauty or excellence out of or beyond Nature, which is and must be the fountain-head from whence all our ideas must be derived. This being acknowledged, it must follow, of course, that all the rules which this theory, or any other teaches, can be no more than teaching the art of *seeing Nature*. The rules of art are formed on the various works of those who have studied Nature most successfully; by this advantage, of observing the various manners in which various minds have contemplated her works, the artist enlarges his own views, and is taught to look for and see what otherwise would have escaped his observation. It is to be remarked, that there are two modes of imitating Nature; one of which refers for its truth to the sensations of the mind, and the other to the eye. Some schools, such as the Roman and Florentine, appear to have addressed themselves principally to the mind; others solely to the eye, such as the Venetian, in the instances of Paul Veronese and Tintoret; others, again, have endeavored to unite both, by joining the elegance and grace of ornament with the strength and vigor of design; such are the schools of Bologna and Parma. All these schools are equally to be considered as followers of Nature. He who produces a work analogous to the mind or imagination of man is as natural a painter as he whose works are calculated to delight the eye; the works of Michael Angelo or Julio Romano, in this sense, may be said to be as natural as those of the Dutch painters.—*Reynolds's Notes Upon Fresnoy's Art of Painting.*

PREFACE

The Plates hereto annexed were originally intended to illustrate the first part of a Practical Essay on Painting, which I have long had in contemplation to publish; but have delayed, from year to year, from its interruption to my professional engagements, from doubts respecting its utility, and a love of ease which, after the day's employment, suggests a more natural recreation than the investigation of an abstruse study; I now publish the plates with a few loose hints thrown together, in the hope of their being useful. Should they be thought of advantage to the younger students of painting, in directing their minds to a regular mode of investigating the intricacies of the art, I shall follow them with others illustrative, in the first instance, of Light and Shade, and, ultimately, of the arrangement of Color. On the contrary, should the work not be considered a desideratum, by publishing only a first part, I escape a heavy responsibility and expense—a tax to which I do not wish that either my vanity or my love for the fine arts should subject me.

JOHN BURNET.

PRACTICAL HINTS

ON

COMPOSITION IN ART

BY
JOHN BURNET, F. R. S.

COMPOSITION.

Composition is the art of arranging figures or objects, so as to adapt them to any particular subject. In composition four requisites are necessary: that the story be well told; that it possess a good general form; that it be so arranged as to be capable of receiving a proper effect of light and shade, and that it be susceptible of an agreeable disposition in color. *The form* of a composition is best suggested by the subject or design, as the fitness of the adaptation ought to appear to emanate from the circumstances themselves; hence the variety of compositions.

The point of time being fixed upon, the action, expression, and incidental circumstances oblige us often to determine on a particular arrangement, that we may be enabled to place the most interesting objects in the most prominent places. Unless our attention be directed to such arrangement in the first instance, we shall often be obliged to put an emphasis on an insignificant object, or throw into repose an interesting point of the action, when we come to consider their relation to a good effect of light and shade.

To secure a good general form in composition it is necessary that it should be as simple as possible. A confused complicated form may hide the art, but can never invite the attention. Horace, in his *Art of Poetry*, inculcates the same doctrine, "*Denique sit quod vis, simplex duntaxat et unum.*" Whether this is to be produced by a breadth of light and shade, which is often the case with Rembrandt, even on a most complicated outline,

or by the simple arrangement of color, as we often find in Titian, or by the construction of the group in the first instance, evident in many of Raffaele's works, must depend upon the taste of the artist; it is sufficient to direct the younger students to this particular, their minds being generally carried away by notions of variety and contrast.

In giving a few examples of compositions, I have confined myself to the four simple and principal forms; not only from their being most palpable, but also from their possessing a decided character, which is at all times desirable. To those who imagine that such rules tend to fetter genius, I shall merely quote Sir Joshua Reynolds, whose works, if properly understood, render all other writings on the subject of painting superfluous. "It must, of necessity, be that even works of genius, like every other effect, as they must have their cause, must likewise have their rules; it cannot be by chance that excellencies are produced with any constancy or any certainty, for this is not the nature of chance; but the rules, by which men of extraordinary parts and such as are called men of genius work, are either such as they discover by their own peculiar observations, or of such a nice texture as not easily to admit being expressed in words; especially as artists are not very frequently skillful in that mode of communicating ideas. Unsubstantial, however, as these rules may seem, and difficult as it may be to convey them in writing, they are still seen and felt in the mind of the artist; and he works from them with as much certainty as if they were embodied, as I may say, upon paper. It is true these refined principles cannot be always made palpable, like the more gross rules of art; yet it does not follow, but that the mind may be put in such a train that it shall perceive, by a kind of scientific sense, that propriety which words, particularly words of unpracticed writers such as we are, can but very feebly suggest." (*Sixth Discourse.*)

To assist in putting the mind in such a train is all that these examples aim at; and to render apparent to the young artist what he will find wrapped up in theoretical disquisition.

The specimens here given merely happened to be in my possession; there are many others that will serve the student, perhaps better, for illustration, which he ought by all means to procure, or make sketches of; as it is only by rendering himself master of the subject that he can hope to avoid the commonplace effects which swim upon the surface, and, being palpable, are adopted by every one whose judgment cannot carry him into the intricacies of the art.

Concealing the art is one of its greatest beauties; and he best can accomplish that who can discover it under all its disguises. I ought, however, to caution the young artist on this head, not to be too fastidious in trying to conceal what can be obvious only to a small number; for, in endeavoring to render his design more intricate, he may destroy character, simplicity and breadth; qualities which affect and are appreciated by every one.

ANGULAR COMPOSITION.

EXPLANATION OF PLATE I.

FIG. 1.—In commencing a composition, it is customary to mark the middle of the space, for the purpose of arranging those points we consider of most importance to the subject; dividing the picture for the regulation of the masses of light and shade, of ascertaining and fixing the horizontal line, etc. This mode of constructing the composition is often suggested from the perspective effect requiring a length of line, thereby obliging us to place the point of sight at one side of the picture; sometimes from the group requiring a large space; which a diagonal line secures, as in the "Elevation of the Cross," by Rubens, or from the conduct of light, as in his picture of the "Descent from the Cross," etc.

Cuyp, in adopting this mode of composition in most of his pictures which are generally "Sunset" or "Sunrise"), places the focus of light at the bottom of the sky, thereby enabling the distant part of the landscape to melt into it by the most natural means; while the strongest part of his sky, being at the opposite angle, produces the greatest expanse, and mixes and harmonizes with the dark side of the picture. Thus the eye is carried round the composition, until the two extremes are brought in contact, the most prominent with the most retiring.

In compositions constructed on this principle (particularly where the landscape occupies a large portion), many artists carry the lines of the clouds in a contrary direction, to counteract the appearance of all the lines running to one point. Thus using the darks of the clouds, etc., *to antagonize*, as it is termed, may apparently produce a better equipoise, but sacrifices many advantages; for we observe in many of the pictures of Cuyp, Rubens and Teniers, where the figures, landscape and sky are all on the same side of the composition, that a rich and soft effect is produced; the strong light and dark touches of the figures telling with great force against a background of houses, trees, etc., which are prevented from being harsh and cutting, by mixing their edges with the clouds, or dark blue of the sky. This doubling of the lines (if I may so express it) gives a picture that rich fullness which we often perceive in a first sketch, from its possessing several outlines. Those who imagine that by thus throwing the whole composition on one side a want of union will be produced will be convinced of their error by perceiving how small an object restores the balance; since, by its being detached and opposed to the most distant part, it receives a tenfold consequence.

PLATE 1—*Figs. 3 and 4.*—In these compositions Potter has made use of the sky as a background, by which mode the high lights of his group have more value, and it is rendered less harsh and cutting; which is the case with his famous picture of "The Bull," the figures in which are brought up against the light side of the sky. If deception and strong relief were all

he aimed at, he has gained them both, though at the expense of some of the higher qualities of the art, "a melting and union," as Reynolds terms it, of the figures with the background. The art is now too far advanced to allow us to be gratified with violent contrast; and a *small portion* of the group, coming firm off the ground, is found to be sufficient to give the appearance of natural solidity to the whole.

Fig. 5.—The original of this sketch, a small etching by Ostade, ought to be in the possession of every artist, for its beautiful arrangement of light and shade, and the skillful way in which they are woven together. As I ought to have noticed above, that the principal mass of light in out-of-door scenes (both in Nature and the best masters) is generally placed in the sky, or upper part of the picture, I may here remark, that in interiors (especially such as are constructed upon this plan) it is generally reversed, the roof and background being reserved for a mass of shadow and repose. Ostade, in his compositions, displays such an ingenuity in their construction as to render his pictures an endless source of gratification and study to the artist. In some of his works the art is so completely hid as to make it difficult to say whether his background or figures were the first composed. We have not only objects intercepting each other in the most natural and picturesque manner, but the figures carried up against them; thus coming in contact with various forms, different in size, distance and color. This, when done with judgment, gives a rich and inartificial effect. On the contrary, in the pictures of Teniers, we often find a number of objects cast down in one corner, evidently for the mere purpose of being painted; which, however, from their situation, their picturesque arrangement and the mechanical skill of the execution, acquire a force, natural sharpness and beauty, that amply compensates for the ostentatious display of such excellencies. Tenier's backgrounds are also totally different from Ostade's principle; his figures being generally surrounded with black spaces of shadow or half-tint. When a story is to be told that requires the spectator to be directed to the heads and hands for expression and action this breadth is more allowable; but breadth, as Mr. Fuseli justly observes, ought never to have the appearance of "flatness or insipidity." It is observable that, in an exhibition where there are a number of objects to distract the attention, those pictures please us most on which the eye is allowed to rest, from their possessing a vacant space; but those very pictures uniformly look blank and unfurnished when hung up singly in a room.

PLATE I—*Fig. 6.*—Claude, in many of his compositions, displays very little address in bringing up his strong dark against the light. In him, it often looks like unaffected primitive simplicity; but it might not be so considered in an artist of the present day. When Claude introduces a figure for such purpose, or in order to give a retiring delicacy to his distance, we often find it of a strong dark blue, which serves also to bring down the same color from the opposite angle of the sky, thereby producing a union between both sides of the picture.

Fig. 4

PLATE II—Fig. 1.—As this is merely a further illustration of the principle noticed in Plate I, I can only refer to the remarks contained in the explanation of that plate. I may here, however, point out the length of line produced by the cattle, goats, etc., as it assists the perspective effect in conveying the eye into the picture, serving also as a base line for the landscape to rest upon. When the sun is placed near the point of sight we sometimes see shadows made use of for the same purpose. A straight line is often necessary also for the sake of variety; and when architecture is not present we must get it how and where we can.

Fig. 2.—Rubens in this landscape has carried the lines of the clouds, trees and ground, all in the same direction; and, from his placing the sun near the point of sight, even his shadows take the same course. When the most prominent or strong dark of the foreground is detached from the side of the picture, it has not only a less formal appearance, but acquires a force from its being cut out on both sides by light; as we shall find when we come to treat of Chiaroscuro. The lights also acquire a force and brilliancy from their being surrounded with dark, and the extent of the distance and continuity of the line are not altogether interrupted.

Fig. 3.—In this subject, "Huntsman Going Out in the Morning," we have the principal group of a complete form in itself, yet forming a part of a whole, in consequence of its being carried round by the two dogs in the foreground, and connected by the principal dog in the other group turning round to the noise. As it is a doubt in the minds of some artists how far it is agreeable to the rules of composition to admit a figure complete in itself as a portion of a group, I shall only observe here, that, as far as form is concerned, their objection cannot apply; and as to individual parts, we see not only heads and hands complete as to form and light and shade; but we find that even an eye is capable of possessing all the characteristic beauties of the art. In fact, this application of it in the abstract, as well as in the aggregate, pervades everything.

An object must not only appear to possess those properties adapted by Nature for its purpose and protection, but also those qualities which have been found by the experience of the best masters productive of beauty; this renders it a source of gratification; and it is then said to be true to Nature and art. For example, if we examine an eye turned from the light, we perceive a breadth of chiaroscuro; the white, or cornea, producing a mass of light, the iris and pupil a mass of shade. We find each of these focused, and a small portion of the strong dark and strong light brought in contact; and the light passing through the iris gives it its transparency, and serves instead of reflected light to clear up the shadow; the watery fluid, in the bottom of the eye and on the under eyelid, gives us that portion of minute finish necessary in all works of art, to which even the protecting hairs contribute. We have here a picture complete in itself; but if we carry our examination to the surrounding lines in the orbit we perceive a harmonious communication and extension of its form, lights and darks, by

which its harshness is softened and diffused, and it becomes a part of the composition of the whole countenance.

PLATE II—*Fig. 4.*—I have given a gradual advancement of the most prominent and dark part of a composition, until, in this example, we have the strongest point brought into the center. In the original, “The Embarkation of the Prince of Orange,” the two principal figures are dressed in strong red, and strong black, and are the most cutting part of the group; and, from their being brought into the center and against the most retiring part, and surrounded by light, Cuyp has rendered them of the greatest importance, though occupying only a very small portion of the picture.

ANGULAR COMPOSITION.

PLATE III—*Fig. 1.*—The plan of composition I have here taken up is in the form of a diamond; which we find often adopted, either as a complete group, or as forming part of a more complicated arrangement. In commencing a composition, I have mentioned, “that it is of importance to mark in those points most necessary to our purpose.” For example, when a story is to be told, the heads and hands, the seats of action and expression, are often referred to each other for the completion of form or extension of light; as by such means the eye of the spectator is led to the commencement and operation of the incident. After arranging the principal points, what are called the “secondary” require the greatest consideration; whether for the repetition of the lines, extension of the form or conduct of the light and shade. Sometimes we are actuated by our requiring a second or third group for the better illustration of the story, which naturally leads us in the direction that affords us the greatest space; sometimes by the principal group demanding a considerable portion of the ground for a mass of shadow, beyond which a strong point is required, as a link of communication between the figures and the background. By making this point the strongest of a secondary group of objects, either from its size, lights or darks, the eye is carried into the most remote circumstances, which become a part of the whole, from the principal group, being made to depend upon *such point* for the completion of its form, the extension of the light, or the repetition of color.

Fig. 2.—In designs constructed upon this plan (especially of the Dutch School), we generally find the lower part of the form strongly pronounced, either by color, or by light upon a dark ground, or vice versâ; this gives the group a firm foundation, and also enables the artist to keep the other objects in their proper situations as to distance from the eye. I wish particularly to direct the student’s attention to this particular, as a doctrine, founded upon the rays of vision, has been attempted to be established, viz.: that objects as they recede from the center of the picture, either to the sides or bottom, ought to be deprived of part of their force of

light and shade and color. This is neither Nature nor art. If the subject requires those objects to be kept subordinate, true art does not deprive them of their natural force by robbing them of their lights, darks or colors; it renders them less obtrusive by the ground which surrounds them, or substitutes other objects of a less attractive quality.

PLATE III—*Fig. 3.*—By making the circumstance from which the story springs a strong point (either from situation, force or color), and surrounding it with those objects more immediately connected, and most illustrative of its effects, the picture explains itself at a glance; which is one of the strong distinctions of painting from poetry—the one proceeding in a circuitous route to hide the dénouement, and keep hold of the attention, the other proclaiming instantaneously the beginning and end of the story. I do not mean that the circumstance ought always to occupy the center, any more than that the hero should always occupy the center; but as it is of use to explain the cause of his action and expression, it has, in my mind, a prior claim to consideration.

PLATE III—*Figs. 4 and 6*—PLATE IV—*Fig. 5.*—We have the strongest light coming in contact with the strong dark in the most cutting manner, in the knee and leg of the falling figure, the arm of the man writing and in the head of the infant Christ. When this can be done without interfering with the breadth of light, it is of the greatest consequence, both on account of its giving a thickness or rotundity to the group, and also because it enables us to keep the most projecting points and the most retiring in their proper places by analogy to one another. I am aware that the management of light and shade often requires a sacrifice of this principle; where we can accomplish our object without such a sacrifice it has always the most natural appearance. Many accidental combinations and beautiful effects of Nature arise not merely from their possessing a good general form and a pictorial arrangement of light and shade, but also from the most projecting points being often assisted by a combination of a harsh cutting line, strong dark and light, or opposition of local color, and hence they strike the artist as being applicable to painting; these being the means he finds frequently adopted by the best masters. It is only under such favorable circumstances that the artist can enter the lists with Nature; and, having but a flat surface to work upon, he is warranted in availing himself of every assistance science can afford. In arranging objects scientifically, to give them at the same time the appearance of natural accident, is one of the perfections of the art.

As the best practical hints are derived from accidental combinations in Nature, whose sudden changes prevent the possibility of sketching, the mind ought to be trained to the most regular and even mechanical mode of arranging the ideas; that in an instant we may be able to determine whether the effects, which we perceive, depend upon a particular form, upon particular arrangement of the light and shade, or upon the manner in which the hot and cold colors are brought in contract. By thus tracing effects to their

proper causes we secure the principal points as a sort of shorthand notes to guide and assist the memory. This practice will also open a road of communication between the eye and the operations of the mind, which neither a hasty sketch nor the most learned dissertation can, separately, produce. At first it may seem more difficult than it really is; but a few trials will convince the student of its practicability, especially as the effects that strike him to be the most pictorial are generally the most simple.

PLATE III—*Fig. 4.*—The cards lying on the ground, in this subject, indicate the cause of the quarrel; and the figure entering from an adjoining apartment gives us a hint of the noise generally attending such brawls. As a moral is here introduced, I shall make a few remarks (otherwise irrelevant to the purpose) in this place. When a picture possesses a moral, it is certainly a great advantage, provided we are not disgusted by its vulgarity, as is the case in the representation of drunkenness, etc., in some of the Dutch School, or by affected sentiment, as in many of the present works of all the schools. The moral must also never injure the picture in its higher requisites. In the early ages, representations of vice were necessary as strong lessons of morality; but as mankind grew more enlightened, they were referred to books, not pictures, for improvement. Besides, an artist ought always to recollect that he paints for the higher, not for the lower, classes of men; and as his business is to convey pleasure, not pain, a little intercourse with society will convince him that men in all ranks have often enough to vex them, or to produce a variance with their fellow creatures, without hanging up on their walls representations tending to increase either the one or the other feeling. The absence of these considerations in an artist (of which we see daily proofs) dooms his works to that neglect which he ascribes to the want of encouragement to the arts generally. Representations of tragical events also (though possessing a fine moral or sentiment) have received but little patronage in this country; whether it is that they are not suited to the character of the nation, who, though not averse to the representation of a tragedy on the stage, are unwilling to choose a constant companion from such a class, or that there are few of those connoisseurs whose feelings are completely absorbed in the contemplation of high art, is a question which this is not the proper place to discuss; the fact is, however, indisputable.

PLATE III—*Fig. 6.*—As this composition consists of a single figure, I shall notice here the method Metzger has taken to render it a part of the whole, especially as we shall have to refer to other plates, when we come to treat of light and shade and color. The figures dressed in black and white, coming in contact and contrast in the strongest manner; the black is repeated by the hat, and diffused by the black marble in the floor, the white is referred to the white marble in the floor and collected into a mass by the white wall; the carpet, which is of red and warm colors, focused at the light by a stick of wax, is repeated by the back of the chair, and carried up by the outside of the window on the edge of the picture, which

is painted of a pale red; the forms are echoed and repeated with the same simplicity, and the picture frame on the wall, from being smaller than the frame of the window, serves at the same time to assist the perspective effect; even the fastening of the casement is not without its use in the composition. In thus obliging a design to depend on its ground for support, consists the principle of union and harmony; but, as I have at present only to draw the student's attention to the arrangement of form and that portion of composition that arises from the repetition and connection of lines, I shall notice one good plan among many others, which is to mark in strongly those points in the ground which of necessity must be introduced from natural circumstances, at the same time contriving the group so that those points become of the greatest consequence to the composition. This often gives a characteristic stamp of Nature to the whole.

PLATE III—*Fig. 7.*—We have here the strong dark point coming in contact with the light ground in the most cutting manner; which is more naturally accounted for by its being the most projecting; as it is the inside of an empty drinking cup, it perhaps indicates the commencement of the story as well as any other means.

PLATE IV—*Fig. 1.*—As an outline can give us little idea of this arrangement, I may be allowed to observe that the four points of light are the upper halves of both the figures (being of a pale yellow), the white dog and a light wall above the fireplace brought in contact with a black powder horn.

PLATE IV—*Fig. 2.*—Ostade's pictures have the peculiarly valuable property of looking well at a distance, thereby attracting the attention of the spectator toward them. When we come nigh to examine we find that this is produced by their possessing a decided mass of light, obtained by means of a light wall, sky, etc. His heads and hands form a number of luminous spots in a mass of half-tint, and are rendered of more value by the introduction of blue and dark draperies; this requires much consideration, in order that these spots may take agreeable and decided forms to prevent confusion. In Ostade's works it is rendered the more easy, as he has seldom any particular story to interfere with the arrangement. His pictures call to my mind a passage in Hervey, which appears like the language of a painter, so completely consonant is it to the principles on which he constructs his work. Speaking of the stars, Hervey says, "On a careless inspection you perceive no accuracy or uniformity in the position of the heavenly bodies, they appear like an illustrious chaos, a promiscuous heap of shining globes, neither ranked in order nor moving by line; but what seems confusion is all regularity; what carries a show of negligence is really the result of the most masterful contrivance."

Fig. 3.—P. de Laer, from his long residence among the Italian painters, has constructed most of his pictures, though generally in the low walks of art, on the most regular and severe principles of their grandest compositions. As this regularity is considered by some to be incompatible with

the negligence of arrangement which they suppose necessary to the picturesque, I shall here make a few observations on that doctrine. I consider it to be false, and not tenable, when referred to the operations of Nature; for we find her conducting and exhibiting the most beautiful appearances and effects in the humblest and most trifling of her works by the same laws that regulate her in the formation of the most sublime. Abernethy says, "That work is beheld with admiration and delight, as the result of deep counsel, which is complicated in its parts, yet simple in its operations, where a variety of effects are seen to arise from one principle operating uniformly." When we refer to the great masters in poetry we find that the "Idyls" of Theocritus are not less regular than the "Iliad" of Homer; or the "Georgics" and "Eclogues" of Virgil than the "Æneid." The English pastorals have failed in giving pleasure, not by the regularity of their construction, but in consequence of their not being founded on truth; the language and scenery not being that of Nature in such situations.

Let me here caution the student against supposing that I mean grossness and vulgarity as proper accompaniments in his representations of common Nature; he must convey such scenes to us with the appearance of their having passed through a susceptible and amiable mind, anxious to render Nature agreeable, not to make her disgusting.

In the work of the best painters in the lower walks of the art, there are numberless examples of this regularity. Even Wouvermans, whose soft and delicate touch seems ill suited to severe regularity of form, or light and shade, has received an advantage by its adoption; his best pictures being founded on the simple construction of his rival. A regular form can always be rendered sufficiently irregular by the means of light and shade; and if P. de Laer's pictures possess this property of light and shade too decidedly for such a purpose, we must recollect that from his painting upon a dark red ground (as was used at the time by many of the Italians) his works often look harsh; the lights, from being thickly painted, having resisted the influence of the ground, while his half tints are absorbed and indented in the shadow.

As the student will have occasion to refer to the prints after the different designs here given, I beg leave to remark, that, in most of the Italian prints which I compared with the original pictures, I found the characteristic points often not attended to. The strong lights wanted their value, either from the shadows being deficient in their proper strength and quietness, or from the introduction of aerial perspective (a circumstance seldom influencing the conduct of the great masters either of the Italian or Venetian schools), or from the manner in which the strong darks and lights were brought in contact. I believe sufficient has already been written on engraving, nor am I against its being considered a liberal translation; the beauty of lines is, perhaps, the only substitute engravers can give for the absence of colors; but surely it is not too much to request, that a strong red, or a strong blue (however ornamented by lines), be referred to its proper scale,

PLATE V

Plate 5.

Corregio.

Fig 3

Quadr.

John Burnet Sc.

either as the extension of light, or the production of shadow. These errors seem to have arisen from contemplating the picture in the twilight, for the more easy detection of the light and shade; a most fallacious method; for, in such case, the most projecting and the most retiring colors are rendered similar.

PLATE IV—*Fig. 5.*—As in *Fig. 2*, we may observe this form influencing the arrangement of the whole group; we have here the heads composed on the same principle, and repeating each other with a simplicity which is safe only in the hands of the best painters. I have mentioned regularity as a quality to be found in the most sublime subjects in painting; but to infer from that that regularity constituted sublimity were as absurd as to say irregularity constituted the picturesque.

CIRCULAR COMPOSITION.

We come now to speak of the Circular Form of Composition, which is applicable to the highest walks of art from its simplicity and extensive sweep; and to the lowest, from its being finely adapted for the purposes of light and shade.

PLATE V—*Fig. 1.*—In this Cartoon we have a fine specimen of this form of composition. In the design a strict adherence to the plan laid down has secured a decided character to the picture. With Raffaele this seems to have been invariably of the first importance; his worst compositions have always a strong feature to recommend them. In this design we have the figures gradually declining from the sides to the center of the circle on the foreground, which enables the spectator to view the whole of the persons employed; to assist which arrangement Raffaele has placed the Apostles on an elevated plane; and, by placing the principal in the center, has enabled them to acquire that consequence their diminution would otherwise have deprived them of. The regularity of the composition is also increased by the division of the group into seven figures on each side, and no one, except Ananias and Sapphira, performs an action that is not repeated. Thus simply has Raffaele contrived not only to tell his story, but also those circumstances which preceded and followed it. This regularity will strike the student as being particularly suited to religious subjects; but a few attempts to make such uniformity appear a natural emanation will compel him to exclaim with the poet:

“Within that circle none durst walk but he.”

As I shall have occasion to speak of the repetition of form as being no less essential toward the production of harmony than the repetition of color I may call the student's attention to it in this place. In compositions embracing many figures a repetition of form and action is often found to be indispensable; a single figure, in such case being found too small to give importance to any action is referred to the next for assistance; as, in coloring, one color is often made to depend upon the adjoining for its shadow

or enlargement. But, independently of its acquiring a consequence by such extension, harmony requires that a strong action should be, as it were, broken down and diffused through the group. In writing this is generally the case, and the reader is prepared for one sentence by what has preceded it. This simplicity and harmonious communication is to be found in Nature, in the antique, in the best Italian masters and in many of the Dutch, particularly Ostade. It is seldom to be met with in the French school, which is fond of sudden contrast, and insulated action, light and color.

PLATE V—*Fig. 2.*—In compositions of out-of-door scenes this circular form of arrangement is often the only opportunity we have of procuring a mass of shade so necessary to the group in a pictorial point of view. I am aware that some *sculptors* consider the arrangement of their figures degraded by any attention to the picturesque effect of light and shade, which to *painters* seem more extraordinary, as sculptors have not the means of local color to produce it. With sculpture, however, it is not our province to interfere; I shall only observe that such reasoning never seems to have influenced Coreggio. The most picturesque arrangements in form, and in light and shade, are to be found in his grandest compositions. We have here six heads placed in the most unequal manner, numerically speaking; the shadow is increased by the dark blue dress of the Virgin, and the two most projecting points by the light drapery of the Magdalen and the strong red of St. Jerome; yet this picture is not less sublime than that of "The Doctors of the Church" (Fig. 3), where the six heads are placed in the most regular manner; four around the altar and one at each side, for the purpose of connecting the lower and upper half of the picture; the consultation of the doctors and the vision expressive of the subject of their research. The prominent points in this work are the same as in Fig. 2, the figure with the book being in a strong red, and the other in white.

PLATE VI—*Fig. 1.*—In this subject Rubens displays all the easy fluency of a great master, who would consider such a design only as an amusement. The manner in which the figures are interwoven with each other, the mode resorted to, to assist the projecting and retiring points, and the velocity with which the whole appears to move, are all worthy of the artist's attention.

Fig. 2.—The student may compare this admirable design of West's, "The Death of General Wolfe," with Fig. 4, "The Death of St. Jerome," as Dominichino has adopted the same means to produce his mass of shadow in the middle of the group, and to bring it in contact with the light on the principal figure.

Fig. 3.—As I shall have occasion to refer to the examples of this great master of light and shade in their proper place it would be unfair to make any observations on him here, where he appears, as Milton would express it, "short of his beams." I may, however, remark that, from his making use of mean materials he often destroys the beauty of that structure which the splendor of its light is so well calculated to adorn.

Fig. 5.—As the merits of this composition have been descanted on by every critic, being a subject well suited for a display of the powers of eloquence, I shall merely offer one or two practical remarks. Raffaele has made the principal figure of the lower group (an interesting young female) detach itself from the ground by a strong warm light cutting against the shadow, and by a dark blue mantle coming in contact with the light; by her addressing the Apostles, and pointing to the demoniac, the two sides are united, and the figures are so linked together that the eye is carried round until we arrive at the most projecting points, the hands and feet of the Apostle with the book. The Disciples express their inability to perform the cure; and, by two of them pointing to the mount, refer the people to Christ, who has retired thither to pray. This is the arrangement, but it was not alone by the expression or arrangement of his figures that Raffaele holds his rank in the art; it was also by the bold and original conception of his subject. He has here displayed the vision of the Transfiguration in the most sublime manner, and by raising his figures from the ground (one of those movements of the mind which are above restraint) has stamped them with the strong feature of immortal beings. Mr. Fuseli luminously describes them rising like “a flame”; if not too metaphorical, he might have said, “like a bright flame issuing as if from a sacrifice, and ascending unto God.”

PLATE VII.—It is not only necessary that a group should have hollows for the reception of shadow, but also projections for the light to rest upon; it not only ought to possess a good general form in the outline which defines it, but the figures must also be linked together in such a way as to lead the spectator in among them. They must appear to have room to stand upon, and every figure must keep his place in its relative distance from the eye; hence a form composed of a concave and convex line has been often adopted as the simplest and best, and possessing the greatest variety of advantages. That it is so generally used will cease to surprise us, when we find it applicable both to the regularity of Raffaele and the irregularity of Rembrandt.

PLATE VIII—*Fig. 1.*—In this design, “The Landing of Charles II,” West has placed the principal figure in the middle of the picture. Commencing his composition at the highest point, he carries on his group until it ends in the distance. Neither in the situation of the hero, nor in the form of the group, does he seem solicitous to hide the science. He has brought the high point in contact with the shadow, and strengthened it by the female whom the boy accompanies, being dressed in strong dark; when this is brought sharp off the ground, as is the case also in *Fig. 2*, it enables us to keep the other figures in their places better than by diminishing the firmness of their shadows or colors.

Fig. 2.—“Cattle Returning Home in a Shower.” In this composition the principal light falls on the convex part of the group, and the depth of the shadow is assisted by the local color of the objects placed in it. The

goat in the foreground is connected to the rest by some white flowers of an elder bush, which cannot be expressed in an outline. As this is from a design of my late brother's I cannot allow this opportunity to pass without expressing the great loss I feel in not having his assistance, not only in these notes, but in everything connected with the art; though practicing painting but for a short time of a short life, his strength of mind, his fine eye for color, and a taste for the beauties of pastoral painting, convince me the English School has lost one that would have been an ornament to that department of the science.

Fig. 3.—Is a repetition of the same form.

PLATE IX.—This plate consists of Wilkie's admirable composition of "The Blind Fiddler," "The Salutation of the Virgin" by Rembrandt, and "A Dance" by Ostade. I shall leave it to the student's own judgment to investigate the various forms on which these compositions depend.

By making the principal heads depend upon one mode of arrangement, the general appearance of the group on a different mode, the background on a third, and so on with the minor points (provided they all tend to the assistance of one another), his composition will not only have intricacy without confusion, but that variety which is so characteristic in Nature. A beautiful combination in Nature will often appear to evade every rule by her being perfect in every mode of examination. All her varieties emanate from a straight line and a curve. A judicious arrangement of objects possessing these various forms gives the strongest natural appearance to a picture; nor ought the artist to leave out rashly what he may conceive to be void of beauty. In coloring, harsh tints are admitted to produce harmony in the other colors; and the most picturesque arrangements often depend on the presence of what might be otherwise considered ugly forms.

As I have made use of the terms "beautiful and agreeable arrangements," it is proper to give an explanation of the sense in which they are applied. By a beautiful arrangement I mean a proper adaptation of those principles that arrest a common observer, and give a pleasureable sensation, which to a cultivated mind increases (not diminishes) by the investigation of the cause which produces it. For example, a beautiful appearance in Nature affects the savage and the philosopher from their sensations merely as men; but a painter, whose life is spent in a constant competition with Nature in producing the same effects, receives a tenfold gratification in following her through those assemblages which to the world beside are, as it were, "a fountain settled and a book shut up." Hence, in art, a beautiful arrangement must be a selection of those forms, lights and colors that produce a similar result; and the taste of an artist is shown in heightening their effect by the absence of those circumstances which are found by experience to produce the contrary. Did an investigation of the means pursued by the great masters tend to abridge an artist's pleasurable sensations, instead of being the most favored, he would be rendered the

Fig 3.

PLATE IX

Plate 9

Fig 1

Fig 2

Fig 3

most miserable of beings; but the opposite is the case, as by such means he is taught an alphabet that enables him to understand the language of Nature. It may be supposed that in my search after so desirable an object I have perused all the works written to define Beauty and Taste, and which endeavor to circumscribe with a line that endless variety and omnipresence which make Nature a source of gratification to all nations under every alteration of the mind; but as I wish to avoid all controversy on the subject, which we often find merely renders the most sublime truths more obscure, I shall only remark that, as far as painting is concerned, the authors of many of these works have done an irreparable injury. Artists generally prefer the opinions of untutored children to the remarks of the most learned philosophers, whose advancement in other sciences really seems to increase their ignorance of this. If I have explained my definition of the terms sufficiently for the artist's comprehension I am satisfied. To explain them to others would be equally impossible as that those others should be able to define them to us. The mind must have received its education through the medium of the eye, not of the ear, to enjoy the faculty of conceiving such ideas, or the power of tracing them to their original source in Nature or in art, as a test of their truth.

Before I conclude I have to apologize for the paucity and brevity of these observations, and beg the reader's constant reference to the plates as the only method of making myself correctly understood. Painting is a practical branch of philosophy, and can only be rendered clear by satisfying the observations of the eye, as well as the reflections of the mind; this, perhaps, is one reason why so much has been written on the subject without those truths being made sufficiently obvious, which the writers wished to demonstrate.

I have also been anxious to avoid tautology, as it will be necessary to go over, in a great measure, the same ground, when I come to treat of Light and Shade, and Color; when many observations which appear to be omitted here will present themselves, from belonging more properly to those divisions of the work,

I must also caution the young artist against supposing that these modes of arrangement are given for his imitation; I merely wish him to be acquainted with the advantages any particular composition possesses, that in adopting any invention of his own he may engraft upon it those or similar advantages. A design that has nothing but novelty to recommend it is a conceit, not a composition. The student in painting can hope to derive advantage from theory only when rendered obvious by ocular demonstration. One great cause of the obscurity which envelops the art is the criticism of those whose ideas on the subject are obscure—to free *the world* from their influence is perhaps impossible; but the artist must free *himself*.

PREFACE

I am now induced to take up the third part of the PRACTICAL HINTS ON PAINTING, from the encouragement the first has met with; but more especially from the approbation of many of our best painters, who are undoubtedly the best judges of the utility of the work. In this part, treating of the conduct of the light and shade, I shall follow the same mode as before, merely throwing out hints as they occur, without any relation to connection, or a regular treatise. The mind is naturally fond of variety, and by leading it through a succession of images, provided their advantages are shown and explained, the end of instruction is accomplished. There is no fixed mode for conveying instruction; those things which appear to the reader to be useful, he will connect in his own mind by a chain of reasoning, shorter than the shortest which could be furnished by writing; and the longest dissertation to prove the existence or utility of that which appears of no advantage would be unavailing.

I have endeavored to trace the effects, as much as possible, to their first causes operating in various ways on the minds of the different artists who have adopted them, whether they were guided by rules, or imitative instinct, we cannot now determine; nor is it my wish to inculcate any doctrine where the student has a better mode of his own to serve as guide. Let him, however, always bear in mind, that in painting, as in other things, to use the words of Dr. Johnson, “The accidental compositions of heterogeneous modes are dissolved by the chance which combined them, but the uniform simplicity of primitive qualities neither admits increase, nor suffers decay.”

JOHN BURNET.

PRACTICAL HINTS

ON

LIGHT AND SHADE

BY
JOHN BURNET, F. R. S.

Before proceeding to investigate light and shade in their various intricate situations it may be proper to notice a few of the more palpable and self-evident combinations, and for the better comprehending of which I shall divide them into five parts, viz.: light, half-light, middle-tint, half-dark and dark. When a picture is chiefly composed of light and half-light the darks will have more force and point; but, without the help of strong color to give it solidity, it will be apt to look feeble; and when a picture is composed mainly of dark and half-dark the lights will be more brilliant; but they will be apt to look spotty for want of half-light to spread and connect them; and the piece be in danger of becoming black and heavy; and when a picture is composed chiefly of middle-tint, the dark and light portions have a more equal chance of coming into notice; but the general effect is in danger of being common and insipid.

Light and shade are capable of producing many results, but the three principal are relief, harmony and breadth. By the first the artist is enabled to give his works the distinctness and solidity of Nature. The second is the result of a union and consent of one part with another; and the third, a general breadth, is the necessary attendant on extent and magnitude. A judicious management of these three properties is to be found in the best pictures of the Italian, Venetian and Flemish Schools, and ought to employ the most attentive examination of the student; for, by giving too much relief, he will produce a dry hard effect; by too much softness and blending of the parts, wooliness and insipidity, and in a desire to preserve a breadth of effect he may produce flatness.

Relief is most necessary in large works, as their being seen from a greater distance than easel pictures prevents their looking harsh or cutting, and gives them that sharpness and clearness of effect so necessary to counteract heaviness. Not only the works of Raphael and those of the Italian school possess this quality, but we find it in the greatest perfection in the pictures of Paul Veronese and Tintoret; and even the larger works of Titian and Corregio have a flatness and a precision which we look for in vain in the succeeding school of Caracci and their disciples, Guido excepted.

Harmony or a union of the different parts of a composition depends upon the intermediate parts serving as a link or chain, either by conveying a sensation of the same colors with those in immediate contact, or by neutralizing and breaking down the harsh asperities of the two extremes, and thus producing a connection or agreement.

Breadth of effect is only to be produced by a great extent of light or shade pervading the picture. If an open daylight appearance is intended, such as we see in Cuyp, etc., it will be best produced by leaving out part of the middle-tint, and allowing a greater spread of light and half-light; this will also give the darks the relative force which they possess in Nature. If a breadth of shadow is required, such as we find in Rembrandt, etc., the picture ought to be made up of middle-tint and half-dark. In the one treatment the darks ought to tell sharp and cutting, which is the characteristic of strong daylight; in the other the lights ought to appear powerful and brilliant, enveloped in masses of obscurity.

The influence of shadow upon any composition, when carried beyond the necessary depth for the relief or distinct marking of the several parts, is breadth, from its absorbing many of the half-tints and rendering the darks less cutting; and repose, from there being fewer of the outlines visible; hence arises a certain grandeur attendant upon space, and an agreeable sensation, from the spectator being allowed to exercise his own fancy in embodying indistinct forms. Thus the gloomy solitude of a wood is increased by the absence of the twittering light through the trees, the absence of their harsh color, and the distinct form and crisp marking of the leaves. Rembrandt has carried this property of shadow beyond the hope of any improvement, and by this means has clothed the most trifling subject with a portion of sublimity. If we allow ourselves to be influenced by the association of ideas it is capable of imparting a greater degree of horror to any subject of terror, as imaginary dangers appear greater than real, being augmented by the operations of the mind. Milton has made use of this quality in describing the situation of the fallen Angels:

“From those flames
No light, but rather darkness visible
Served only to discover sights of woe.”

And Titian in his picture of “The Martyrdom of St. Laurence,” which otherwise is disagreeable from its being cold and black.

Having thus defined some of the characteristic features of shadow, the effects of light in a great measure explain themselves, being in most instances of an opposite nature. Its cheerful influence operates on the mind of the spectator, either when viewing the festivities of a village holiday or when he beholds it diffused over the general face of Nature, it may be termed the *Allegro* in Painting.

EXPLANATION OF PLATE I, FIG. 1.

If light, collected into a focus by means of a lens, be thrown obliquely upon a wall it will explain to us one of its principal properties, upon which many artists have founded their principles of light and shade. Where the bundles of rays are collected the light is increased in brightness, and when they become more diffused and spread out it naturally becomes more feeble,

Plate I. Fig. 1.

losing itself in half-tint. In this example we have some of the most essential qualities of light as applicable to the purposes of painting. We have a principal light, which, being produced by the collecting of the rays, leaves that portion of the ground the darkest which comes in contact with it, thereby assisting its brightness. We have an innumerable variety of gradations, until the light is dissipated and lost. Some artists maintain, and justly, that every light, however small, ought to have a focus, or one part brighter than another; and as we find this to be a general law in Nature it is surely safe ground to go upon. For the same reason we ought to have one portion of a dark more decided than the rest. If these two extremes are brought in contact we make them assist each other, one becoming brighter and the other darker from the effect of contrast. If they are placed at the opposite sides of the picture we have greater breadth and a more equal balance. Let us now examine how these properties have been made use of in the management of the light and shade of a picture. If, for example, we take a head by Rembrandt we find the principal light or focus in the upper part of the face (which he often, to render more luminous, surrounds with a black bonnet or hat, and even this he keeps of a cold tone, to give more value to the flesh); the light is then allowed to fall down on the figure, producing thereby a union and an appearance of his light giving

out rays of the same hue as itself. If we follow him in the conduct of some of his larger compositions we find the same principle adopted, whether they consist of many figures, such as the hundred Guilder print, or of few, as in the small "Nativity" in the National Gallery; thus rendering the most complicated compositions subservient to the simplest principles of light and shade. A few experiments on a ground of a middle-tint, with a pencil filled with white, and another dipped in black, will give the student an insight into all the changes capable of being produced upon this principle.

PLATE I, FIG. 2.

If a diagonal line be drawn through the picture, and the extreme dark and extreme light be placed at opposite sides, we must of necessity have the greatest breadth of effect. If a balance or union between the two sides be wished there is no other way but by borrowing a portion of the one and exchanging it for a portion of the opposite; and not only may this practice be made use of for the harmony of the whole, but the light and the shade will be thus rendered more intense by the force of opposition. Now, whether the dark which is carried to the light side be very small, or very large, and, vice versâ, we have the groundwork of some of the most powerful

Plate I. Fig. 2.

and most natural effects in painting. If the light is placed near the horizon, as in evening skies, for example, such as it frequently is in Cuyp, we see it rising upward until lost in middle-tint in the upper part of the picture, and the middle-tint descending into shadow by means of trees, figures, etc., thus making a sweep around the picture, and thereby affording the greatest opportunity for breadth of effect. If the two extreme points are connected by intermediate figures, so as to form but one group, we have the greatest firmness, as the light part of the group will be relieved by a dark ground, and the dark part of the group by a light ground; if we pursue the contrary practice, and place the dark part of the group on the dark ground, and the light part of the group on the light ground, we have more breadth and softness of effect. There is no want of examples, either in Nature or in pictures, to warrant our following either mode.

PLATE I, FIG. 3.

Sometimes we find the principal light in the center of the picture gradating to the extremities with a border of dark binding in the whole. By this mode the light has great brilliancy, especially if a small portion of dark is brought in contact with it. This melting of the light into shadow has been carried to great perfection by Corregio and Rembrandt, who most frequently relieved the dark side of their figures by a still darker background, which Reynolds (who has adopted this mode in so many of his works) mentions as giving a rich effect.

If this method is pursued in the management of the light on a hand, or a single head, it is equally applicable, as in a more extensive work. In the landscapes of Claude, who has often placed the sun near the center of his compositions, we find the light managed upon the same broad principle, gradating to the sides of his canvas by means of buildings, ships, etc.,

*Plate I. Fig. 3.*

with often a clump of dark trees jutting into the mass of light, thereby giving it its brilliant character, and serving at the same time to convey the dark sides into the picture. If he reminds us occasionally of Rembrandt, it arises from his great breadth of effect; if of Corregio, it is the soft union of his lights with the shadow. A few walks in the evening, in the twilight and at night, in scenery where Nature has an opportunity of showing her various effects, will put the student in possession of a power to unravel all her mysteries. We do not know whether Claude, Corregio and Rembrandt were acquainted with the works of one another, but we have the most evident proofs that they were well acquainted with the principle by which Nature produces her most striking effects; and a breadth of light and shade, soft and subdued tones of color, and every requisite for forming the mind of an artist, is still to be found in the same school in which they studied.

PLATE I, FIG. 4.

If the lights are to predominate in a picture from the ground being low in tone it is of the utmost consequence that they should not only be varied in form and magnitude, but that they should produce an agreeable arrangement in the picture, seeing that they will attract greater notice than when the ground is lighter.

I shall here take the liberty of introducing a passage from Reynolds' works, as nothing can exceed it in utility and justness of observation. In his notes upon Fresnoy, speaking of light and shade, he says: "The same rules, which have been given in regard to the regulation of groups of figures, must be observed in regard to the grouping of lights; that there shall be a superiority of one over the rest, that they shall be separated and varied in their shapes, and that there should be at least three lights; the secondary lights ought, for the sake of harmony and union, to be of nearly equal brightness, though not of equal magnitude with the principal."

Plate I. Fig. 4.

The Dutch painters particularly excelled in the management of light and shade, and have shown, in this department, that consummate skill which entirely conceals the appearance of art.

"Jan Steen, Teniers, Ostade, Dusart and many others of that school may be produced as instances and recommended to the young artist's careful study and attention.

"The means by which the painter works, and on which the effect of his picture depends, are light and shade, and warm and cold colors. That there is an art in the management and disposition of those means will be easily granted, and it is equally certain that this art is to be acquired by a careful examination of the works of those who have excelled in it.

"I shall here set down the result of the observations which I have made on the works of those artists who appear to have best understood the management of light and shade, and who may be considered as examples for imitation in this branch of art.

"Titian, Paul Veronese and Tintoretto were among the first painters who reduced to a system what was before practiced without any fixed

principle, and consequently neglected occasionally. From the Venetian painters Rubens extracted his scheme of composition, which was soon understood and adopted by his countrymen, and extended even to the minor painters of familiar life in the Dutch school.

"When I was at Venice the method I took to avail myself of their principles was this: When I observed an extraordinary effect of light and shade in any picture I took a leaf of my pocketbook and darkened every part of it in the same gradation of light and shade as the picture, leaving the white paper untouched to represent light, and this without any attention to the subject or to the drawing of the figures. A few trials of this kind will be sufficient to give the method of their conduct in the management of their lights. After a few experiments I found the paper blotted nearly alike; their general practice appeared to be, to allow not above a quarter of the picture for the light, including in this portion both the principal and secondary lights; another quarter to be as dark as possible, and the remaining half kept in a mezzo-tint or half-shadow.

"Rubens appears to have admitted rather more light than a quarter, and Rembrandt much less, scarce an eighth; by this conduct Rembrandt's light is extremely brilliant, but it costs too much; the rest of the picture is sacrificed to this one object. That light will certainly appear the brightest which is surrounded with the greatest quantity of shade, supposing equal skill in the artist.

"By this means you may likewise remark the various forms and shapes of those lights, as well as the objects on which they are flung; whether a figure or the sky, a white napkin, animals, or utensils, often introduced for this purpose only. It may be observed, likewise, what portion is strongly relieved, and how much is united with its ground; for it is necessary that some part (though a small one is sufficient) should be sharp and cutting against its ground, whether it be light on a dark or dark on a light ground, in order to give firmness and distinctness to the work; if, on the other hand, it is relieved on every side, it will appear as if inlaid on its ground. Such a blotted paper, held at a distance from the eye, will strike the spectator as something excellent for the disposition of light and shadow, though he does not distinguish whether it is a history, a portrait, a landscape, dead game, or anything else; for the same principles extend to every branch of the art.

"Whether I have given an exact account, or made a just division of the quantity of light admitted into the works of those painters, is of no very great consequence; let every person examine and judge for himself; it will be sufficient if I have suggested a mode of examining pictures this way, and one means at least of acquiring the principles on which they wrought."

This is so admirable as to need no comment, and ought never to be lost sight of, as upon the management of light and shade depends the general look of the picture.

PLATE I, FIG. 5.

As a wall or flat surface recedes from the light it necessarily becomes darker, and as the outline is more or less defined it has the property of advancing or receding. These may seem to be properties too evident to every one to need any explanation; but when we see a foreground, in place of coming flat up to the edge of the frame, appear to slope down like a declivity, we must either suppose that the painter knew not the principle

*Plate I. Fig. 5.*

of assisting the perspective by means of light and shade, or had not the faculty of seeing Nature. When we consider that Nature spreads out her landscape upon a horizontal plane, and that we have to compete with her upon an upright surface, we shall find we have not only to call in to our aid strong light, coming in contact with sharp dark, warm colors, and such as have the property of advancing, but to subdue the more distant part of the ground by soft shadow and retiring cool tints.

PLATE I, FIG. 6.

When the composition is kept dark, forming a mass of shadow in the center of the canvas, the light is often conducted round it by means of the sky, water, or light foreground; and as the dark becomes in a manner isolated, it receives great vigor and importance. As this is the reverse of Fig. 3, we find the same simple broad principle predominant, and whether it be composed of a clump of trees, or the dark dress of a whole-length figure, we find the management guided by the same rules; only if a portrait, the circumstance of the face coming light off the background requires the feet or base of the figure to tell dark on the ground, for the sake of firmness; and if any part is more lost in the background than another, it perhaps

ought to be the middle portion of the figure. If a clump of trees, such as we often find in Claude, is to be represented, their stems shoot out from a ground of the same darkness, thereby producing a union of the trees with

Plate I. Fig. 6.

the shadow which they cast on the ground. As a light in the center of dark tints must thereby acquire an increased consequence, so a dark in the middle of light tints receives the same importance.

PLATE I, FIG. 7.

I have noticed in another place the union of one part of the picture with another by means of a repetition of the light; it will therefore be unnecessary to say anything further upon such management. I may, how-

Plate I. Fig. 7.

ever, observe that it is not only of service to repeat the light, but also that it should be of the same color; accordingly we observe in Cuyp, whose principal light is often yellow, that it is carried into the dark part of

the picture by means of yellow drapery, a cow, sheep, or a few touches of golden color, according as he wishes such extension of his light, large or small. If the principal light is cold, such as blue and white, we find it repeated either by a reflection in water or a figure dressed in the same cold tint. Portrait painters generally make use of the light in the sky to repeat the lights of their head and hands by making it of the same color.

PLATE II.

Rembrandt, from his first commencement in the art, seems to have been always solicitous to represent the brightness of light at the sacrifice of every other quality; and in his first works it often forms a circumscribed spot, for, as Reynolds justly observes, "that light must appear the brightest which is surrounded by the greatest quantity of shade"; but

Plate II. Fig. 1.

Rembrandt.

though this conduct enables the artist to give light one of its strong characteristics, whether it be the sun, a candle, fire, etc., yet there are other properties quite as essential, and more easy to contend with, which are its effects on the different objects it illuminates. Rembrandt's close attention to Nature soon led him to expand his principle; for example, he perceived

the flame of a candle exceeded in brightness everything around it in a ten-fold ratio, which could be expressed only by darkening the whole, and leaving the light in a spot, and thereby extinguishing its influential effect: but if the candle itself was hid the appearance of every object under its influence was not only more easily given, but the effect of the whole became more deceptive and natural. His extending of the light through the picture gradually became more enlarged, and even his deepest shadows are illuminated by streaks of red or rich brown running into them, which (from his principal light being of a warm tone) and keep up a connection without destroying the breadth of light and shade.

In Fig. 1 of this Plate, "Christ Restoring the Daughter of Jairus," we have a principle upon which many of his pictures are constructed, viz.: a ray of light falling into an apartment, and received upon a light object which, as in Nature, reflects back the rays, and illuminates the surrounding objects, giving thus his principal light the properties of light itself. The shadows of all objects receiving such direct rays we sometimes see strongly

Plate II. Fig. 2.

Rembrandt.

defined, as is the case in Nature, and indeed we often find Rembrandt placing objects for the express purpose of producing such shadows, which gives the appearance of truth to the whole effect; at other times we find the shadows swallowed up in the splendor of the light, as if afraid of disturbing its breadth. Sometimes we find his strong light, his strong dark and his hot and cold colors all focused at one point; and at other times his darks employed to clear up the middle-tint, and his strongest colors made the means of uniting his light with the shade. In short, whatever was

his practice, he seems always to have had some end to accomplish, and when we find him departing from what would be the effect in Nature under such circumstances we may rest assured that such departure did not arise from ignorance. We often see the attempts of de Hooze and others of representing light confined to its effect in the sky or on the objects out of doors, while it is but sparingly admitted on the figures seen within the apartment; on the contrary, Rembrandt's figures are lighted up with a splendor which extinguishes every other subordinate light, and which we often cannot account for upon the common principles of Nature.

The subject below, in Plate II, is from a picture in the Louvre, and shows how small a portion of light sometimes engaged Rembrandt's solicitude. He has employed the edge of the frame work, the dark under the cradle, and the dark dress of the figure to give it its value. The curtain is a dull red, and is carried into the picture by the dress of the child being of the same color.

PLATE III, FIGS. 1 AND 2.

Figs. 1 and 2 represent the "Taking Down From the Cross" and the "Presentation in the Temple." Daulby, in his catalog, mentions two states of the original etchings more worked upon; but I find, on examination, they are merely the plates left without being much wiped, thereby

Plate III. Fig. 1.

Rembrandt.

Plate III. Fig. 2.

Rembrandt.

holding the crosier, and a light at the torch in the "Taking Down From the Cross," the copper being made clean at those places. In many of the varieties of Rembrandt's etchings he has got credit for effects supposed to be produced by much labor, which were the result of the printing alone.

casting a stain over the whole, except a high light on the cap of the figure. In the "Descent From the Cross" he has kept the principal light in the upper part of the picture in contact with the strong dark; in the other it is kept below, and is carried upwards by a chain of communication to the head of the crosier. Where the light is at one side, or low down in the picture, such as in the "Wise Men's Offering," in the king's collection, there is greater space for a breadth of shadow than when the light is kept in the center, as was the principal of most of his first works. In some of his designs he seems to have allowed the entire half of his canvas for repose, and to have confined his composition, with all its lights, and darks, and colors, to the other half. Very little often serves to connect the two. The dark manner of Rembrandt has advantages over every other, if kept within due bounds, as it enables the painter to give a rich tone to his colors without their appearing heavy, which more feeble backgrounds would not admit of, unless the colors are to stand as darks instead of lights; accordingly we find Titian, Tintoretto, Giorgione, Rembrandt and our own Reynolds all swayed by the same opinion.

PLATE III, FIG. 3.

When the light part of the composition is placed upon the dark side of the background, and the dark part upon the light side, greater firmness and solidity are produced, and a more equal balance is kept up. The con-

Plate III. Fig. 3.

Vandyke.

trary method has more breadth and softness of effect, but unless the light part is of a different hue from the light ground upon which it may be placed, and the dark part is of a warmer or colder tone than the shadow

which surrounds it, there is a danger of their losing their substance and becoming flat. Vandyck, in this composition, has made the colors of his figures assist his arrangement of light and shade; the white dress of the child and the yellow dress of the queen make the principal light; the white is repeated by the cap, ruff, etc., of the other figures; the yellow is carried across by the embroidery upon the king's dress, and spread out upon the underpart of the sky; the darks are made up of the dark dress of the king and the child's dress, which is a dull green; the latter tint is carried across the picture by part of the curtain turned up, of the same color; the curtain itself is a dull yellow and brown, serving as a ground to the queen's dress; the red cloth of the table is repeated by the two chairs; the floor being a dark neutral tint gives a firmness to the bottom of both the figures. If the student, in examining the light and shade of a picture, remarks what colors are resorted to for such purpose, in a few trials he will find that which at first appears complicated and difficult to unravel will become easy and beneficial, serving to strengthen his powers of reflection in the highest degree.

PLATE III, FIG. 4.

The dark forming the greatest mass of shadow of the picture is often, before being brought in contact with the extreme light, increased and collected to a point by some object whose local color conduces to such pur-

Plate III. Fig. 4.

Metzu.

pose, as in the example here given; where the black dress of the female is brought, at its darkest portion, in contact with the lightest portion of the white dress. This serves to give air to the deepest shades of the back-

ground and greater firmness to the object so relieved. The collecting to one head of all the light, and all the dark, of a piece, gives the artist the greatest force of the palette. To enable the other side of the picture to keep up with so much vigor, Metzu has thrown his strong color into the scale, and brought his red and blue in contact, by a glove lying upon the chair, at the point nearest the eye. The warm color is taken to the other side by a dog, etc., and the white of the female repeated by a handkerchief the man holds in his hand, his neckcloth, etc.

PLATE IV, FIG. 1.

In a single head we often have but one light; it is therefore necessary to get it to harmonize with the shadow, either in the background or upon

Plate IV. Fig. 1.

Rembrandt.

the dress. Rembrandt, accordingly, frequently painted the light of the dress of the same color as the shadow side of the face, thereby keeping up

Plate IV. Fig. 2.

Rembrandt.

Plate IV. Fig. 3.

Titian.

a union and simplicity. In Fig. 2 we have the hands making a second light; and in Fig. 3 we have three spots of light, the shirt and ruffles of both hands; this is the Titian Reynolds thus mentions in the description of the Dusseldorf gallery, and which is now in Munich: "A portrait of a gentleman, by Titian, a kitcat, one hand a-kimbo, the hand itself not seen, only a bit of the ruffle; the other, the left, rests on what appears to be his sword; he is looking off. This portrait has a very pleasing countenance, but is not painted with much facility, nor is it at all mannered; the shadows are of no color; the drapery being black, and the ground being very near as dark as it prevents the arm a-kimbo from having a bad effect. It is no small part of our art to know what to bring forward in the light and what to throw into shade."

The linen in this picture, and most others of Titian, is light and cutting, the flesh forming the half-light. Reynolds, talking of the "Descent From the Cross," by Rubens, says: "He well knew what effect white linen, opposed to flesh, must have, with his powers of coloring; and the truth is that none but great colorists can venture to paint pure white linen near flesh; but such know the advantage of it." In Rembrandt we generally find the same treatment, although I have often observed the linen kept cool when near the face. To give the flesh a luminous character he often introduces cool tints coming near it, and when he can find nothing else, uses the shadows of linen for such purpose. In Vandyck's early Italian manner we find the linen much brighter than in his later works, where it became more of a leaden cast.

PLATE IV, FIGS 4 AND 5.

We sometimes find the light of the sky introduced for the purpose of repeating the lights of the heads and hands, as in Fig. 4; sometimes to spread and enlarge the lights of the head, and give it more consequence, as in Fig. 5. To assist the hand in keeping its situation in this picture he has defined it by the hat and shadow on the chair. As it is of the utmost consequence that every object should keep its relative distance with regard to the eye of the spectator it is a good method to define those parts we wish to advance by a dark shadow coming in contact with them, and to surround the retiring portions with a ground of a less opposing character; as we know lines strongly and sharply defined will approach, and those of a softer nature will retire. Such blots are afterwards to be accounted for by the contrivance of the artist; in this consists the application of the background of the figures, one of the most difficult and essential portions of the art.

As light and shade determine the concavities or convexities of all objects, without them the most intelligent outline would be but as a map or flat surface. If, for example, we take a cup and examine the influence of light and shade upon it we find in Nature those principles which artists

have applied to many purposes in painting. We perceive the near edge strongly defined by the light side coming in contact with the shadow, which becomes darker as it descends into the cup; we have the dark side brought firmly off the light, thus giving it the simplest and most effective means of a true representation of its character. This may appear too evident to notice in a work of this Nature, which does not profess to give the mere rudiments of the art; but I am convinced that the most intricate principles of painting emanate from very few sources, and that these

Plate IV. Fig. 4.

Vandyke.

Plate IV. Fig. 5.

Vandyke.

sources are of a very simple Nature. Every thing within our view is filled with examples, and the mind of the student requires only to be directed to an examination and investigation of the subject before commencing any work or while in the progress. He must not only know what is his intention, but must be in possession of the best method of expressing such intention.

PLATE V, FIG. 1.

When a shadow is carried through the middle of the picture we have not only an opportunity of giving a breadth of effect, but the receding

Plate V, Fig. 1.

P. Nolpe.

portion of the sky and perspective of the ground are assisted by their sharpness being swallowed up in repose; see this principle noticed at Fig. 1, Plate V.

PLATE V, FIGS. 2 AND 3.

When the principal light is kept at one side we have an opportunity of introducing a larger portion of shadow than when the light is in the center, which is often of the first consequence, especially if repose is required in the work.

When, as in Fig. 2, a multitude of small objects are introduced into a picture, or when the general arrangement consists of many figures, it is impossible to get a breadth of light and shade, unless many of them are united together of the same strength, so as to form a mass of light, or of dark; but which to do with skill is one of the greatest difficulties; for unless the science is in some measure concealed it is no longer science. In the confusion of a battle, for example, it is unlikely that two or three white horses should be collected, so as to form a mass of light; and yet we see in *Salvator Rosa* and *Wouvermans* this method adopted; or in a representation of dead game it is equally improbable that we should always find a swan

for the same purpose, as in Weeninix. To obviate such apparent artifice of the painter we find P. Veronese, Tintoretto and others making use of the sky or light buildings for a principal mass in their large works, consisting of many figures. In the small works of the Dutch school we find the light upon a wall, or on the ground, or in a window, in indoor subjects, and the sky, etc., in open daylight, made use of for this purpose.

Gerard Douw, notwithstanding his extreme finish, contrived to preserve that breadth of light and shade which his instruction in the school of Rembrandt had empowered him to do; and in small works this breadth of effect is the more difficult to retain, seeing that there is so little space for the middle-tints, darks, lights and reflected lights to be observed in Nature, and withal, for a certain bluntness in the outline, to prevent the several objects from looking like small models. Reynolds, in his notes to

Plate V. Fig. 2.

G. Douw

Fresnoy, to illustrate this quality, says: "We may have recourse to Titian's bunch of grapes, which we will suppose placed so as to receive a broad light and shadow; here, though each individual grape on the light side of the bunch has its light, and shadow, and reflection, yet altogether they make but one broad mass of light; the slightest sketch, therefore, where this breadth is preserved, will have a better effect, will have more the appearance of coming from a master hand—that is, in other words, will have more the characteristics and *generale* of nature than the most laborious finishing where this breadth is lost or neglected." One method among many which we sometimes find Gerard Douw adopting, so as to convey an appearance of high finishing, and yet preserve the breadth of Nature, is to give the texture or surface of an object without altering the tints. For example, in painting a piece of carpet or tapestry he seems to have laid in his broad lights and shadows, and, while wet, applied a piece of fine cloth, so as to leave an impression of the threads over the whole, then in the high lights to have touched each thread with light, and in the shadow with dark touch-

ing, which, did the lines accord with the undulation of the folds, would have given a true appearance of the breadth and detail of Nature.

The art of giving a finished look to a picture is one of the most difficult departments of painting, for under it is implied the exact strengthening of the different shades and colors, which defines their relative situations in the picture, the introduction of and detailing the minute parts, without disturbing the great breadth of the whole, and the giving to different substances their several and proper characters. The term finish, when applied to coloring, implies giving to the representations of objects that exact tone which the objects themselves possess in Nature under the same circumstances, either by repeated glazings with transparent washes, or by a careful mixture of the colors on the palette in the first instance.

Plate V. Fig. 3.

Corregio.

As the principle of placing the light at the side of the picture has already been noticed at Plate III, I shall, in adverting to Fig. 3 of the present plate, merely mention the color.

The principal light is composed of the white and blue garments of Christ, and repeated in the sky, it being of the same cool tint; the warm light of the angel makes the principal for the head and hands of Christ, and is repeated by a torch carried by figures in the distance. So much cold color being admitted on the lights requires the shadows to be kept warm, to prevent the picture from looking heavy; accordingly we find Corregio has kept the darks of a rich brown; Rembrandt, who was master of this department of art, when his light is cool makes his shadows the hotter the darker they become; Rubens, who formed his style of coloring upon the Venetian, seems to have been guided by the same opinion. In one of his maxims he says: "Begin by painting in your shadows lightly, taking care that no white is suffered to glide into them; it is the poison of a picture except in the lights; if ever your shadows are corrupted by the introduction of this baneful color, your tones will no longer be warm

and transparent, but heavy and leady. It is not the same in the lights, they may be loaded with color as much as you think proper." Whoever examines the works of the great colorists will find this impasting of the lights, and keeping the shadows rich, juicy and transparent was their universal practice. The original of this subject, which is in the possession of the Duke of Wellington, has this character, as, indeed, have all the works from Corregio's own hand. Opie, in his lectures, gives a clear definition of Corregio's management of *chiaroscuro*, as follows:

"By classing his colors and judiciously dividing them into few and large masses of bright and obscure, gently rounding off his light, and passing, by almost imperceptible degrees, through pellucid demi-tints and warm reflexions, into broad, deep and transparent shade; he artfully connected the fiercest extremes of light and shadow, harmonized the most intense opposition of colors, and combined the greatest possible *effect* with the sweetest and softest *repose imaginable*."

PLATE VI, FIG. 1.

I have noticed in another place that when the darks of the group are brought off the light side of the background greater firmness is obtained, and more vivacity, which latter is the peculiar character of daylight. Cuyp, by placing his figures in such a position as to throw long shadows across the picture, gives a great appearance of sunshine. If the strong darks are placed on the delicate half-light, instead of on the strong light,

Plate VI, Fig. 1.

Cuyp.

they have greater force, as the ground has a more retiring quality; the strong colors have also a more natural appearance, as in the event of colors being opposed to the glare of light their brilliancy is destroyed.

A few small touches of light are sufficient to convey the light into the dark side of the picture, and to take off the heaviness of the shadows. In compositions, when the background is very dark, we find shining substances, such as mirrors, metal, armor, etc., employed, as they take on a sharp light, and thereby connect the shade with the light without destroying its breadth; on the contrary, they add to its depth.

PLATE VI, FIG. 2.

When the light part of the group is placed upon the light side of the ground, provided there can be sufficient firmness given, we must of necessity have a greater breadth of effect. Vandyck has, in this picture, kept the principal light upon the sleeve of the jacket (which makes the most prominent point), and has diffused it upon the sky. The cool tints of the shadows of the jacket and part of a blue ribbon detach it from the under-part of the sky, which is warm. The warm coloring of the boy, and the cloak which he carries, and the king's breeches being of a dull red, assist

Plate VI. Fig. 2. Vandyck.

the arrangement. The warm colors are carried into the shadow side of the picture by the dun color of the horse, the stump of the tree and the saddle cloth. The cool blue of the sky mixes with the foliage of the trees, and prevents it from interfering with the hat, which has greater point in consequence, and balances the shadow side of the picture, besides drawing the attention of the spectator to the head. The warm color of the flesh necessarily detaches itself from the cool ground; but in such situations we often find Rubens and all his pupils bring strong blue in contact with the head, which gives it a great value and a luminous effect. We thus perceive a light figure may be strongly relieved even by a light background, provided the colors are opposed to each other; thereby preserving the greatest breadth of light.

PLATE VI, FIG. 3.

We have in this subject the dark of the group brought off the light part of the ground with great firmness, and a very large portion of the outline sharp and cutting, which, though it may give the strong feature of natural objects, has a harsh appearance at first sight. Whether it be that

in real objects their actual existence enables them to harmonize with the harshest effects of light and shade; or that the real separation of one part from another, admits of a strength of color incompatible with a flat surface, such as an outline on canvas, is worthy of the student's examination; as in Nature he will often find the most distant parts of an object more sharp and cutting than the nearest outlines, and yet keep their situation. To represent this on canvas requires the most scientific management; as a work may have the strength and freshness of Nature, without being a just representation, when the situation of one part with regard to another is taken into the account.

Plate VI. Fig. 3.

P. Potter.

Potter in this picture (in which the objects are of the natural size) has made use of the simplest and firmest principles, as regards light and shade. We have the group strongly defined by part of it coming light off a dark ground, and dark off a light one; we have the composition taking a decided form in one direction, and the light running across it in another; we have therefore the strong look of Nature, which consists of simplicity, decision, and strength.

In the early masters we have these qualities often in a high degree; and had they less of an inlaid flat appearance, would be more valuable than the more harmonious softenings of modern light and shade; but we must never forget that objects in Nature are more or less round, that they are delicate as well as forcible, and that the harshest colors are under the influence of light and shade.

PLATE VI, FIG. 4.

The light part of the group is here brought in contact with the light part of the background, and the shadow assisted in its strength by the local colors of the objects placed within it. The yellow cow, which makes the light, is surrounded by others of a dull red and brown, which are relieved by a still darker ground. This gives a great breadth to the group. The cool color of the upper part of the sky is carried across the picture

by the grass and leaves being of a cool green; the dark sharp marking of the horns, eyes, etc., gives a lightness and finish to the whole, as it allows the broad lights and shadows to have more union. In Cuypp the local color

Plate VI. Fig. 4.

Cuypp.

of his objects, whether hot or cold, is kept up undisturbed by the light and shade; this gives great breadth and the distinctness of Nature in open daylight.

PLATE VI, FIG. 5.

In this subject we have the light figure upon the dark ground, and vice versâ. In Nature we often perceive strong effects arising out of simple and decided principles, which, if sketched at the time, will be of the utmost value to the student, by giving him an insight into the science of light and shade; and will often serve as a key to commence with in forming larger

Plate VI. Fig. 5.

combinations. Reynolds mentions a mode of composing by taking a figure from some celebrated master, and designing others to correspond with it; thereby imparting a grandeur of style to the whole. So, by commencing with something sketched from Nature, we give a decided look of truth to the other parts of the picture.

Many painters model their groups for the purpose of obtaining a true representation of the light and shade. Small figures, however rude in form, will serve this purpose, and give the artist many invaluable hints.

Tintoretto and Corregio, both great masters of chiaroscuro, are known to have availed themselves of this method; and the student must have a most erroneous idea of his art who imagines excellence can be obtained without the assistance of every auxiliary. The most learned arrangements of light and shade may astonish, but there is a charm in the chiaroscuro of Nature which carries irresistible sway.

PLATE VI, FIG. 6.

In this subject we have the dark group brought off the light shade of the background in the simplest and most decided manner; and the principles of light and shade made applicable to giving the strong look of Nature, viz.: breadth and solidity to the ground, and light and extent to the sky. Rembrandt has often been accused of being artificial in his effects, but he never misses his aim, either in representing the splendid emanations of light, or the quiet depths of shadow; the peculiar character of an object, either in texture or in color, and that appearance familiar to the recollection of every one; but to convey which, either in poetry or in painting, is only in the power of a few.

Plate VI. Fig. 6.

Rembrandt.

Rembrandt seems always to have taken up a leading feature in his works, and never to have lost sight of it. The varieties in his prints are but corroborations of this; as in his anxiety for its preservation we trace him destroying every impediment, either by covering down or burying whole groups in shadow, or by leaving in an unfinished state other groups, with a mere outline to define them. For example, if we take the first state of the print of the great "Ecce Homo," we perceive he has made Christ in the center of a group, in a quiet broad mass of light, with the strong darks gradating from him, right and left, and surrounded by masses of half-tint.

He has then etched in the principal group, commencing with the figure addressing the multitude, and terminating with the right hand of Pilate. This portion being in strong light, interspersed with a variety of strong darks, acquires by this means great brilliancy and agitation. We have, therefore, the quiet character of Christ preserved, and his superiority maintained, by his forming the center of one group and the apex of the other, rising, as Fuseli describes it, "like a pyramid from the tumultuous waves below."

If we take his print of the "Angels Appearing to the Shepherds," in the first state we find a broad mass of shadow running through the center in a diagonal line, thus giving it its greatest magnitude. In the upper part is preserved the principal light, radiating from a center, with a multitude of children sporting in its beams, and out of which the angel addresses the shepherds across this gulf of shadow. The second light, which is in the lower portion of the print, he has, in the next state, cut up by a number of darks and lights, irregularly dispersed, thus conveying the appearance of confusion and terror to the shepherds, their herds and flocks, which are represented flying in all directions. These two examples out of many, which the student will discover by his own examination, will suffice to show that light and shade may be made to contribute to the character and fitness of the subject, and that of this adaptation of it, Rembrandt holds unrivalled possession.

PLATE VII.

When a picture is chiefly composed of light and half-tint, the darks of the figures must necessarily tell with great force, from their being so little of half-shade to rob them of their value; the mid-day sun filling with intense light every particle of the atmosphere gives that luminous appear-

Plate VII. Fig. 1. A. Van der Velde.

ance, which is so strongly characteristic of an out-of-door effect, the dark local colors of the figures, from the absorption of the rays, retain undiminished power, and give that firmness and vivacity to the scene which prevents it from looking feeble. In Nature, figures, from their upright position, have a greater consequence from the flat shadows being weakened by the light

of the sky falling into them; for, seeing that the whole heavens are filled with light, it is showered down and reflected in all directions. Also, from their being in motion, they attract the eye; a circumstance to be noticed by the artist, who has to give them their relative value on canvas, as they possess in reality. The consideration of all these circumstances influences

Plate VII. Fig. 2.

A. Vandivelde.

many painters in giving the darks the full force of the palette. As a general character and the leading features of strong daylight are to be purchased at any sacrifice, critics who do not sufficiently investigate these matters may complain of want of air, but the student, by a close attention to the subject, will not easily be scared by the cry of "*sans vapeur*."

Birds in the air, boats on the water, figures on the sands, cornfields, or light roads, have all this characteristic feature in a high degree, from the middle-tint being on so light a key.

Plate VII. Fig. 3.

Claude.

Cuyp often accomplishes this by the general tone of the picture being warm, and his shadows brownish, thereby allowing his blue draperies and cool blacks to have greater point. P. Veronese and Rubens have many pictures on the same principle.

Opposition of color is of great importance in the treatment of pictures on a light key, as it gives great relief and distinctness without cutting up the breadth of light; such as blue upon a warm ground, or red upon a cool one, bright yellow upon a cool gray, etc. In No. 3, Claude has made great use of such opposition. The general appearance of the picture is warm, the dark blue of the water is carried across the piece by the dark blue draperies of some of the figures, and is suffused upon the upper part of the sky. The red is interspersed upon the boats and the draperies of the other figures; and, warming the near part of the buildings, is repeated at the top by a figure looking over the balcony and two red flags upon the blue of the sky. He has placed two blue flags upon the warm part of the sky to repeat the cool color.

Pictures painted on a dark key have already been noticed as possessing many advantages, which have led our greatest colorists to its adoption. But as low-toned pictures are apt to look heavy and black, unless richness of shadows, or sharpness of lights be preserved, so pictures painted on a light key are apt to look flat and unfinished unless the greatest circum-

Plate VII. Fig. 4.

J. Ostade.

spection be used. In Nature, the intense light of the sky, and the atmosphere, which is filled with its innumerable refractions, spread a luminous character over the whole scene; to represent which the artist can employ only a greater degree of whiteness, a very inadequate quality, and hence the great difficulty of imitating the splendid brightness of midday or the brilliant effects of an evening sky. In treating the one, unless the delicate varieties of the half-lights are attended to with the greatest care, the picture will look crude and unfinished; for the tints being so nearly allied to each other, the exact sharpness to define them, and their exact tone, either by repeated scumbling or mixing them to the proper tint in the first instance, require an attention and study of the most refined quality, without which the shadows will be powdery instead of pearly, or the lights white instead of luminous. In the other arrangement the yellow tones may become

solid and foxy, if deprived of the delicate cool tints so necessary to prevent their appearing too hot, and to give the whole that tremulous unsteady appearance which light possesses in Nature.

Light pictures, from the tenderness of their light and shade, require the colors opposed to each other, whether blue opposed to red, or yellow to cool gray, to be managed with the greatest delicacy; otherwise their strength

Plate VII. Fig. 5.

Сурр.

will destroy all appearance of light and air. In light pictures strong colors can stand only as middle-tint, or for leading the light into the shade, but can appear as lights only by being relieved by strong shadow. We often find them, as in P. Veronese, etc., standing as darks, or made use of to give objects an appearance of solidity, without breaking up the general mass of light in the picture.

PLATE VIII.

I shall here recur to the subject of middle-tint for the purpose of taking a general view of the various modes of arranging this important branch of light and shade; as upon the strength of the middle-tint depends,

Plate VIII. Fig. 1.

Hondekooter.

in a great measure, the general look of the picture. By the middle-tint is meant the medium between the extreme dark and extreme light; but as such a scale is too gross to take in all the gradations lying between so opposite qualities, I have, for the sake of clearness, made use of intermediate links, viz.: half-dark and half-light. If we take a ground of a shade composed chiefly of half-dark and middle-tint, and introduce the strongest lights, we shall find it necessary to introduce a portion of half-lights to spread and break down their harshness. If the extreme dark is placed upon the middle-tint it will, by contrast, render it more in union with the half-light; if it be placed on the half-dark, a breadth of shadow and softness will be the result. Harshness of effect in treating pictures upon a dark scale arises, most commonly, from the want of sufficient quantities of middle-tint and half-light, thereby causing the principal light to be too much defined, as we frequently observe in the works of Michael Angelo Caravaggio.

Plate VIII. Fig. 2.

Wouwermans.

Rembrandt and Corregio excelled all others in the introduction of demi-tints, which illuminate their deepest shadows. In their works and in Nature we perceive the lowest tones of middle-tint are removed from blackness, either by their warmth or the introduction of some positive black or blue, to produce an appearance of air floating within them.

The exact quantity of middle-tint must depend upon the arrangement of the subject and the taste of the painter, but it is absolutely necessary to prevent it from always interposing between the extreme light and extreme dark.

This invariably gradual declination of the light into the shadow is one cause of the insipid look of most of Vanderwerf's works, nor is it, as Sir Joshua Reynolds justly observes, consonant with the effects in Nature. Variety demands some portion of the composition to be sharp and cutting; and richness is to be obtained only by a continual changing of portions coming sometimes dark and sometimes light off the ground; this endless

variety in Nature can be imitated only by this intricate weaving of the outline with the background; so that the same sound principles which guide the conduct in the treatment of the whole may be traced in the management of the detail.

Middle-tint, in pictures painted on a light key, ought to be in some measure robbed of its consequence, either by the introduction of reflected lights or positive half-lights; for if it occupies too large a portion of the canvas the work must of necessity lose its characteristic feature. We must, therefore, depend upon some other agent to prevent the picture being flimsy, and void of that solidity which is so inherent in the most delicate of Nature's works. Accordingly we find small sharp darks introduced, the value of which has been noticed in another place, and (what is of the utmost importance) a sharp edge to the lights and half shadows throughout the whole.

The light pictures of Teniers and Cuyp are full of this precision in the touch, a flatness in the shades, a sharpness in the handling and a distinctness in the most approximate colors; by this alone a general breadth can be preserved, and the most splendid light (even of a sky) filled with a multitude of forms.

Plate VIII. Fig. 3.

Teniers.

In this notice of middle-tint or ground of the picture I may appear to have recapitulated what has already been said in other parts of the work, but my anxiety to put the student in possession of every information in my power urges me to place it before his eyes in every point of view.

The management of light and shade, as relates to a whole, ought to be always present in the student's mind, as it is from inattention to this alone that a work is often destroyed in its progress. In the commencement of a picture those parts only are strongly defined, or marked in, which are of the greatest importance, and the other portions are left in a broader and

less obtrusive state. But in the progress of the work the proper subordination of the latter is often injuriously diminished.

The general character of an object is its most important feature, and this is to be preserved at the price of every other quality, if it cannot be retained upon other terms; as it is this which is imprinted on the mind of every one, and which is, therefore, paramount to all its other properties. If the object does not possess this feature upon the canvas it cannot attract or interest the spectator, as in all probability its other properties are unveiled except to the artist alone, who has examined it attentively. For example, in a portrait, when we see the head alone finished, it often pleases more than when the work is complete; our attention is led involuntarily to the countenance, which would be the case were we introduced to the original; and this preponderance, which exists in Nature, must of necessity become less when in the finished work the other portions of the picture have received a greater consequence. The importance of the countenance, the general character of the flesh, viz.: its transparency, breadth of local

Plate VIII. Fig. 4.

color, luminous appearance, etc., may be all lost from the injudicious introduction, in the other parts of the picture, of lights, darks and middle-tints, in the artist's anxiety for richness of effect, or in his wish to give splendor and harmony by the strength or variety of his colors.

In sketching a landscape from Nature, when we have time only to put down the leading features, detailing such objects alone as are striking or interesting, we find the spectator often more satisfied from feeling a corresponding sensation from the truth of the representation imprinted on his mind than when, in a more finished work, the painter has destroyed the great breadth and luminous character of the sky for the purpose of mixing the shadows of the clouds with the trees, etc., to counteract flatness, or when he has subdued the strength of his colors for the sake of taking off their harshness. When he begins to define the different parts for the sake of finish, unless he has the treatment of the picture as a whole constantly before his eye, the expansive look of the sky, the fresh and decided appearance of Nature in the colors, the gray tones and softmarkings of the aërial perspective may all disappear, and give place to requisites of an inferior kind.

In all objects in Nature there is something predominant, and which alone has struck the observation of every one. If the artist gives that he brings his object at once home "to men's bosoms," and without which his greatest labor is but industrious trifling. The character of an object depends upon a particular color, a particular touch, a particular concentration or diffusion of light, according to its form or substance; to obtain which ought to be the constant study of the student, as it is the language of his art, and the only language universally understood.

I have in these brief notices of the art of light and shade endeavored to point out the various modes of establishing a scientific arrangement of its powers, and applying them to any subject the student may have in hand. The changes are infinite; but, by an attentive examination of the effects in Nature or in art, he will find the sources from which they arise

Plate VIII. Fig. 5.

Frank Hals.

few and simple. Opie, in his lectures, speaking of *chiaroscuro*, strongly recommends the study of the several masters who have excelled in this department of the art: "By studying the works of the great masters of *chiaroscuro* he will, by degrees, become acquainted with all the artifices of contrasting light to shade, color to color, to produce relief, of joining light objects together, and dark objects together, in masses, in order to give splendor and breadth of effect; of gradually sinking some objects wholly or partly in shadow, and losing their outlines in the ground, to produce softness and harmony; and of making, in other places, abrupt breaks and sharp transitions, to produce vivacity and spirit. He will also learn their rules for shaping their masses, and of adapting them in regard to force or softness to the nature of the subject, whether grave or gay, sublime or terrible. By this he must be directed when to give his light the form of a globe, or when to send it in a stream across his canvas; when to make a dark mass on a light ground, or a light mass on a dark ground; when he may let his light die away by imperceptible gradations, when diffuse it in greater breadth and abundance, and when it may more properly

be concentrated into one vivid flash." This is so excellent, and embraces so many of the best modes of the management of light and shade, that the student, who can comprehend them and put them in practice, requires no farther instruction in this part of the art. He will be in possession of a key to unlock the richest stores of Nature; he will be in possession of a sort of shorthand to note down her most fleeting effects; and by understanding the cause which gives them existence, rivet them in his memory. Without having accustomed himself to this mode of arranging his observations his life will be spent in an endless search after that which is continually passing before his eyes.

Light and shade, considered as a means of producing a deception, by making parts of the picture advance, and other parts retire, so that everything may keep its relative situation, as regards the distance from the spectator, is a necessary attendant upon perspective. It is, however, often violated in the best works, for the purpose of giving a general breadth, or

Plate VIII. Fig. 6.

Titian.

of preserving the light in a good shape; but, when compatible with both of these, it is of the utmost consequence; and the painter can enter into a competition with Nature only by a perfect knowledge of the best modes of adapting it to such purpose.

Richness of effect, either by a mixture of the light and shade, so as to give an appearance of doubling to the outline, or by relieving the outline by a ground possessed of a variety of strengths and distinctness of form, surrounded by flatness, when we wish any part to attract notice, or to preserve the expression undisturbed, are both under the dominion of chiaroscuro, to whose control the whole army of colors yields implicit obedience.

The application of light and shade, in a poetical point of view, is capable of creating an association of ideas, without which the imagination of the spectator would experience nothing but disappointment. For example, if we represent a scene remarkable for disasters or shipwrecks, the mind is excited, and an expectation raised, which none but an artist imbued with

the poetry of the art can gratify, by clothing the scene in all the ominous effects of elemental strife; whether the shadow

“Strangles the traveling lamp:
That darkness doth the face of earth entomb,
When living light should kiss it?”

or

“The sky seems to pour down stinking pitch,
But that the sea, mounting to the welkin’s cheek,
Dashes the fire out.”

Shakespeare, who was possessed of all the poetry of the art, clothes his scenery with those circumstances which awaken a thousand pleasing or awful sensations as the subject may require; whether

“The gray-eyed morn smiles on the frowning night,
Checkering the eastern clouds with streaks of light.”

Whether

“The glorious sun
Stays in his course and plays the alchemist;
Turning with splendor of his precious eye
The meagre cloddy earth to glittering gold.”

or when

“Light thickens; and the crow
Makes wing to the rooky wood.”

or when he bids

“Thick night
Pall herself in the dunnest smoke of hell.”

We have him adopting the softness and breadth of Corregio, the splendor and gorgeous effects of Veronese, Rubens or Cuyp, or the ominous twilight and midnight darkness of Rembrandt or Michael Angelo Caravaggio. His light and shade is the chiaroscuro of Nature passing through a mind susceptible of its finest impressions, and capable of placing such effects before the eye of the spectator, “unshorn of their beams,” or unimpaired in their sublimity.

kingdom, they were forced also to acknowledge the independence of Chios, Cos, Rhodes, and Byzantium. Very soon afterwards Selymbria, Perinthus, Methymna, and Mytilene withdrew from the Athenian confederacy; and though the confederacy continued to exist, and the Synod of the allies still met, there remained but the shadow of the great alliance organised by Callistratus. As the disasters of the Social War gradually broke down the influence of Aristophon, his opponent Eubulus came more and more into prominence, fighting his way largely by means of judicial prosecutions,¹ and gradually gathering around him a group of able men—Æschines, for instance, who had once supported Aristophon,² and his brother Aphobetus—until, about the year 355, he had attained the leading position in the State. It was probably through his influence that peace was made with the allies in 355.³

It was during the years of the Social War that Demosthenes' first two speeches on political subjects were composed. The war had involved an intolerable strain upon the financial resources of the city: more than one thousand talents had been spent in three years upon mercenaries alone⁴:

¹ Dem., *in Meid.*, §§ 207, 218, and schol.; *de Fals. Leg.*, §§ 191, 293.

² Dem., *de Fals. Leg.*, § 291.

³ Schol. ad Dem., Olynth. III, § 28.

⁴ Isocr., *Areop.*, § 9. The Speech of Isocrates On the Peace illustrates the extreme exhaustion of the city. The law of Periander (see p. 96) was one of the measures designed to obtain funds promptly.

and the nervousness which evidently prevailed in regard to the finances of the city is illustrated by these speeches, both of which had their origin in proposals of a financial character.

In or about the year 356, Androtion, a pupil of Isocrates, but (if Demosthenes gives us a true portrait of him) a person of brutal temperament and immoral life, proposed the appointment of a commission to get in the arrears of the war-tax, which amounted to fourteen talents.¹ Either, Androtion declared, the sacred vessels used in religious processions must be melted down and made into coin, or there must be a fresh war-tax, or the arrears must be called in. The latter course naturally commended itself as the least objectionable; a commission was appointed, and was given the assistance of the Apodectæ (the receivers of public moneys) and of the Eleven (the chief police-officers); and among the commissioners were Androtion and his friend Timocrates. Androtion appears to have behaved with great inconsiderateness—even with some cruelty—in exacting the money due; and the feeling aroused by this encouraged two of his personal enemies, Euctemon and Diodorus, to prosecute him shortly afterwards, not on a matter arising out of the commission itself, but on a charge of proposing an illegal decree.²

¹ How there came to be arrears under a system by which the rich advanced the sums levied is not clear. Perhaps they had failed to advance the whole of the amounts required of them. The sums still owing were very small; hardly any one owed more than a mina.

² Note I at the end of the Chapter.

The decree thus attacked was one awarding crowns to the Council which went out of office in the summer of 355, and of which Androtion himself had been a member. It was said to contravene two laws—first, that which required a preliminary resolution of the Council itself, before any proposal could be made to the Assembly; and secondly, that which forbade the award of crowns—the regular form of compliment to an outgoing Council—to any Council which had not built a certain number of triremes. The proposal was further stated to be unlawful, because Androtion had been guilty of immoral practices which disqualified him from taking part in public business; and Androtion's argument, that the enmity against him was really due to his public-spirited services in recovering the arrears of the war-tax, was, it was urged, quite unjustified; as was also his claim to gratitude for his treatment of certain sacred treasures, which he had melted down and recast, thereby enhancing their value: his official conduct had really been such as to deserve the utmost reprobation. Such was the case put in the mouth of Diodorus, whose speech (which followed that of Euctemon) was composed for him by Demosthenes. But Androtion could reply that a Council could not be expected to propose a vote of thanks to itself; and that the Council had actually collected the funds for building the necessary number of triremes, but that one of the officials had absconded with them. This fact certainly freed the

Council from blame; nor could the enormity of Androtion's personal conduct be held to justify the infliction of a stigma upon the whole Council. Androtion therefore was properly acquitted. Demosthenes, though he makes Diodorus warn the jury to beware of the unscrupulous ingenuity of his rhetorically trained adversary, himself writes to his brief, and that brief a bad one¹; so that his arguments appear suspiciously subtle and sophistical.

We do not know why Demosthenes undertook the case. It may be that Androtion was a supporter of Aristophon, and that Demosthenes was trying his hand first on the side of the Opposition. (Aristophon had certainly himself proposed a similar commission to enquire into cases of debt to the sacred and secular funds of the State²; and it is therefore probable that Androtion's decree had his approval.) Or he may have been particularly interested in the case on account of the alleged failure of the Council to build the proper number of ships. That his interest in all that affected the navy was already active had been shown by the Speech on the Trierarchic Crown, and by his own repeated service in person as trierarch; and it was to be still more plainly proved in the following year. The passage in the Speech against Androtion³ in which he emphasises

¹ It is very probable that he had some technical justification, in point of law; but he had none in equity.

² Dem., in *Timocr.*, § 11.

³ §§ 12-16.

and illustrates from history the dependence of the prosperity of Athens upon the efficiency of the navy is thoroughly characteristic of him. Besides this, he may well have been moved to indignation, as he often was later, by what seemed to him to be rascality masquerading in the guise of service to the State; and it is at least of interest that he claimed now, as later, to try the conduct of politicians even in small things by the standard of the highest traditions of the city. Androtion professed to have increased the value of certain golden crowns, which had been awarded as marks of honour and dedicated in the temples, by recasting them into the form of golden cups,—mere signs of wealth.

And [says Demosthenes] he did not even observe that never to this day has this People been eager for the acquisition of money; but for honour it has been eager, as for nothing else in the world. It is a sign of this, that when Athens had money in greater abundance than any other Hellenic people, she spent it all in the cause of honour; her citizens contributed from their private resources; and she never shrank from danger when glory was to be won. Therefore she has those eternal and abiding possessions—the memory of her actions, and the beauty of the offerings dedicated in honour of them—the porticoes which you see, the Parthenon, the Colonnades, the Dockyards—no mere pair of vases these, no paltry cups of gold, three or four in number, weighing a mina apiece, to be melted down again whenever you choose to propose it.

For the rest, the Speech is vigorous and the tone of virtuous indignation well-sustained, expressing itself in irony, in rhetorical questions, in short pungent sentences and strongly worded phrases.

The second speech which Demosthenes must have composed at about the time when the Social War was drawing to an end (or perhaps shortly after peace had been made) was that against the law of Leptines. Leptines had proposed, with the approval of Aristophon, to abolish—retrospectively as well as for the future—those grants of immunity from certain burdens¹ imposed by the State, which had frequently been made as the reward of distinguished public services. The proposal doubtless arose out of the prevailing agitation of mind in regard to the resources of the State; and was probably suggested by recent real or supposed abuses of the practice of granting such immunity. Demosthenes himself a few years later² protested against the recklessness with which these grants were made; and the opponents of the law desired not to retain the existing practice, but to amend it in a better manner than Leptines' proposals would have.³

The law was carried in the Assembly, probably

¹ The chief of the burdens in question were the choregia—the duty of providing choruses for the Dionysiac and some other festivals; and the gymnasiarchy, or stewardship of the games celebrated at the Panathenæa, etc. The giving of tribal banquets and some other duties were also included. But no such permanent immunity was given from the trierarchy or the war-tax.

² *In Aristocr.*, § 201.

³ Note 2.

in 356; but the mover was at once indicted for the illegality of his proposal by one Bathippus. Bathippus however died, and more than a year elapsed before his son Apsephion took up the case. It was now only possible to attack the law, not the mover¹; and in accordance with custom, the People, who by passing the law had made it their own, appointed speakers to defend it—Leptines himself, Aristophon, Leodamas, and Cephisodotus (all distinguished orators), and a highly respected citizen named Deinias. Apsephion was represented by Phormio, and Demosthenes supported his case, acting nominally in the interest of Ctesippus, the son of Chabrias, who had been slain in battle at Chios and had left his immunity to his son.² The main grounds of the charge of illegality were doubtless set forth by Phormio, who addressed the court first. Demosthenes, though he pays some attention to the legal aspect of the case, lays special stress on the bad moral effect of such a law—on the unwisdom of abolishing one of the incentives to public-spirited action, and so causing the city to appear ungrateful for good service done to it; and, above all, on the breach

¹ See Note 1.

² It is not certain whether Ctesippus was actually a party to the prosecution; or whether Demosthenes was merely persuaded or engaged to speak by Ctesippus or his mother (towards whom, Plutarch tells us, he was said to have felt an attraction, though he did not go so far as to marry her). I can see no sufficient reason for supposing (as Blass does) that Demosthenes did not deliver this speech himself.

of faith, so contrary to the traditions of Athens, involved in taking away privileges which had been granted, merely because some few of the recipients had proved unworthy of them. He further points out that neither the State nor any of its citizens would gain much by the law. So far there can be little doubt that Demosthenes was right; and the tone which he adopts is dignified and statesmanlike. On the other hand, many of the arguments which he uses are almost transparently sophistical¹ and give the impression not only that he must have calculated out all the possible arguments for and against the measure, and the ways of meeting the former and urging the latter, but also that he could equally well have argued on the other side; and this cool and calculating unfairness alienates the reader's sympathy (in spite of the generally pleasing style and high moral tone of the Speech) more than the injustice which appears in later speeches as the result of passionate indignation in a good cause. The result of the trial is not certainly known.² But we hear very little of grants of immunity after this; and it is at least probable that the law was allowed to stand.

The Speeches against Androtion and against

¹ In particular he takes cases which Leptines' law was evidently not intended to cover—if it seemed to cover them, it was at most a matter of bad drafting—and treats them as typical.

² The point is a disputed one, and no piece of evidence has been produced which cannot be interpreted consistently with either theory of the issue.

Leptines are mainly of interest because they show us Demosthenes at a time when he was little more than a political lawyer, and not yet a statesman fired by strong conviction. His convictions gathered strength slowly; and though the qualities which appear in his later work are already seen in certain parts of these speeches, the contrast between them and the Third Philippic or the Speech on the Crown indicates how much he had yet to develop both as a statesman and as an orator. But even as a statesman he makes a very favourable appearance in 354, in the Speech on the Symmories or Naval Boards—the first of his extant speeches before the Assembly.

The debate in which the Speech was delivered was occasioned by reports circulated in Athens of the vast preparations for war which Artaxerxes was making, and which the Athenians, alarmed by the attitude which the King had adopted towards their allies, and uneasy owing to the help which Chares had given to Artabazus,¹ viewed with apprehension, fancying that the King might be intending to make an attack upon themselves. (His preparations were really directed against his own rebellious subjects in Egypt and Asia Minor.) A number of speakers urged the Assembly to forestall the supposed intentions of Artaxerxes by declaring war upon the Persian Empire; and they appealed to the traditions of the past, the glories of Marathon and Salamis, in favour of their

¹ See above, p. 110.

proposal.¹ It is plain that the proposal itself was little short of madness. Even if the danger to the possessions of Athens from Philip of Macedon had not been growing more and more pressing (as will be shown in the next chapter), it would have been a hopeless task for her to attack Persia single-handed; and to attempt to persuade the other Greek States to join her would have been equally hopeless, even if the King's preparations had been aimed at her. The Greeks were altogether disunited, and Athens had no funds with which to enter upon such a campaign. Demosthenes therefore opposed the project, urging the reasons just given, and making them palatable to his audience by dovetailing into them the conventional contrasts between Persian and Athenian honour, by referring to the championship of Athens against Persia—still to be maintained, but not by action at inopportune moments,—and by expressing his confidence that if any real danger from Persia did arise, men and money would be forthcoming readily enough; though at the same time he argues that it would not be to the interest of the King himself to attack Greece. The latter argument is less convincing; but the main purport of the Speech is sound and statesmanlike.

But while deprecating the rash proposal to

¹ The idea of war with Persia had also perhaps been rendered attractive to many by the writings of Isocrates, and particularly by the *Panegyricus*.

THE STATUE OF DEMOSTHENES IN KNOLES PARK

FRONT VIEW

declare war, Demosthenes took advantage of the interest aroused by the debate to propose a practical reform, with a view to increasing the efficiency of the navy. The political situation obviously required Athens to be ready for action, if not against Persia, at least against other enemies; and the system introduced in 357 by the law of Periander had not proved satisfactory in every respect. It has already been mentioned¹ that the richer members of the Naval Boards instituted by that law found ways of evading their proper share of the burden—they would, for instance, arrange that certain work should be done by a contractor for a talent, and would then exact the whole of the talent from their poorer colleagues.² They spent little or nothing themselves, and yet obtained the immunity which was granted to a trierarch from all other burdens³ for the current year, and also from the liability to the trierarchy itself until after the lapse of another year.⁴ It would also appear that the duties of the several Boards and of their members were distributed in an unbusinesslike manner, so that in case of default it was not certain who was responsible; and besides this, the Twelve Hundred, who were liable to the burden under the law, were twelve hundred only in name, owing to the number of special exemptions which were allowed. Demosthenes proposed to increase the Twelve Hundred to a

¹ p. 96.

² Dem., in *Meid.*, § 155.

³ Not, however, from the war-tax. ⁴ Dem., *de Cor.*, §§ 102 ff.

nominal two thousand, in order that when all exemptions had been allowed for, there might actually be twelve hundred persons available; and to make so minute a subdivision of the members of the Boards, the taxable property, and the vessels to be equipped, and so detailed an assignment of definite duties to definite groups of persons, in regard to collection and equipment, that evasion should be impossible, and that the duties should be properly carried out. The thoroughness of the proposed reform is very characteristic of Demosthenes. As in his earlier speeches he had considered every possible argument that could be adduced on either side, so in proposing a practical measure, he leaves no detail unprovided for, and tacitly anticipates every objection, while at the same time he appeals to the People to display that unselfish readiness to perform any duty that might be laid upon them, without which the best-planned scheme must fail.

The proposed reform was not accepted; but it was a significant declaration of policy; and the main object of the Speech was achieved, for war was not declared against Persia. That this result was mainly due to Demosthenes is almost certain, for scarcely any other speaker, he tells us,¹ supported him; and if it seems strange that he should have carried such weight, when he had only been a regular speaker in the Assembly for about a year, it must be remembered not only that his case was

¹ *Pro Rhod.*, § 6.

THE STATUE OF DEMOSTHENES IN KNOLE PARK

SIDE VIEW

really unanswerable, though it might require some courage to state it in face of the misplaced patriotic appeals of the other side, but also that he himself had probably attracted attention by now, both by his obvious oratorical gifts, and by his public-spirited performance of the duties of the trierarchy and the other liturgies which he had discharged.

The position which Demosthenes intended to take up towards the leading statesmen or parties of the day is not expressly defined in the Speech, because it was not the custom to mention living statesmen by name in the Assembly. But it is probable that Aristophon, discredited by the failure of his policy in the Social War, had retired in the interval between the attack upon the law of Leptines and the debate on the Persian question; or, if not, that the proposal of war with Persia was the last effort of his supporters. Eubulus, whose policy was mainly one of peace and retrenchment, was taking his place as leader, and receiving support particularly from the richer classes—the leaders of commerce and the principal tax-payers—to whom the avoidance of war (except so far as it was necessary for purely defensive purposes or for the protection of trade) was of great importance. In the Speech against Leptines Demosthenes had spoken in opposition to Aristophon; and in the Speech on the Naval Boards he was on the side of Eubulus, in so far as he deprecated a rash military venture and laid stress upon the exhaustion of the financial resources of Athens.

But Demosthenes was certainly not an advocate of the interests of the well-to-do classes,¹ for the reform of the Naval Boards which he proposed was designed to make it impossible for the rich to evade their duties; and he wished to carry on in a more satisfactory manner the preparations for a crisis which might arise at any moment. Before long his antagonism to the policy of Eubulus is more clearly defined; and our next task will be to attempt to realise more completely what that policy was.

The aims and methods of Eubulus are still a subject of controversy among historians of Greece. It is admitted, on all hands, that he was an upright and incorruptible statesman—no small distinction for a politician of those times—and that he was a master of finance. It is disputed whether his policy was wise and patriotic or merely narrowly prudent.

We have seen how greatly the city had suffered in consequence of the Social War. There were indeed some who minimised her losses and her exhaustion²—she had still in fact a considerable fleet, though little money for its upkeep; there were even (as we have seen) those who were not afraid of provoking the hostility of Persia; and there must already have been some who cried for

¹ Even in attacking the law of Leptines, he was not supporting the granting of immunities to rich men in any indiscriminate fashion.

² See Isocr., *Areopag.*, §§ 1, 2.

vengeance upon Philip.¹ Yet there can be no real doubt that the first need for the moment was a breathing space, in which the city could replenish her treasury, repair her navy and her defences, and enable her trading-vessels once more to ply along the great trade-routes without fear. It was under such circumstances that Eubulus began to take control of affairs. In 354 he became a member of the Theoric Board,² and owing to the confidence reposed in him, the chief elective offices in the administration came to be held by members of that Board.³ Under his direction the number of triremes was greatly increased, the dockyards were repaired and enlarged, and a very considerable sum of money collected, without recourse being had to extraordinary taxation. It appears that the success of Eubulus' finance was partly due to the provident construction of the annual Budget—for the fact that the Theoric Board was appointed for four years, and the tenure of the chief financial offices by its members, must have made it more possible than before to construct plans on a large scale—and partly to his encouragement of trade, which, among other advantages, increased the sums received by means of indirect taxation. Thus Eubulus not only instituted large operations, which must have been "good for

¹ *Comp. Dem.*, Phil. I, § 43 (spoken in 351-0).

² It is disputed whether he held any other specific office, and as there is no evidence either way, the question is insoluble.

³ See above, p. 98.

trade," in connection with the docks and fortifications, but he greatly improved the roads and the water-supply of the city itself—useful measures, at which Demosthenes scoffs unjustly,¹ but which conferred benefits upon the masses as well as upon the trading classes. By the institution of a new and more expeditious procedure for the settlement of mercantile disputes, he rendered an undoubted service to Athenian commerce.² At the same time he kept a strict eye upon officials, and prosecuted them remorselessly if any sign of corruption or irregularity appeared.³ Recognising the actual weakness of the city, and her inability at the moment to pursue an imperialistic policy with any success, he would not be drawn into war, though he took steps, as we shall see, to secure the interests of Athens in the Thracian region, and so to protect the corn-supply, and, while refusing to enter upon a campaign against Philip, took proper measures of defence when Philip seemed likely to threaten Attica. The apparently incurable disunion of the Greek States was an obstacle to any attempt to form a lasting coalition against the rising Macedonian power, and he recognised the fact.

On the other hand there can be no doubt that he confirmed and gave new security to the system

¹ Olynth. III, § 29.

² Heges., *de Hal.*, § 12; Pollux, viii., 63, 101; Harpocr., *s. v.* *ἐμμηνοὶ δικάαι*: comp. Xenophon's treatise *On the Revenues*, ch. iii. (from which Eubulus may possibly have derived the idea).

³ See Dem., *de Fals. Leg.*, §§ 290–294.

by which theoric money was distributed; and he may even have extended the distributions. In what way he did this cannot be determined with absolute certainty; but that there was a law which in some way forbade the application of the theoric money to military purposes, and that in 349 it was a recent law, and therefore in all probability was proposed by Eubulus and his party, is proved by the demand made by Demosthenes in that year¹ that its repeal should be facilitated by those who had proposed it. The statement of a scholiast that Eubulus enacted that any proposal to repeal this law should be punished with death is due to a misunderstanding of some words of Demosthenes.² It is most likely that the law put an end to the assignment of unallocated funds (whether for military or other purposes) by means of decrees of the People, and that it did so simply by enacting that all funds not allocated in the annual Budget³ should become theoric money; for no decree might contravene a law, on pain of penalties which might be very heavy, and in order to pass any special vote of money out of the surplus it would be necessary to repeal the law of Eubulus. That is why, when in 349 Demosthenes desired to convert the theoric money to military purposes, he demanded the appointment of Nomothetæ; for only through Nomothetæ could laws be repealed or passed.⁴

¹ Olynth. III, § 12.

² *Ibid.*

³ See above, p. 125.

⁴ See above, p. 91, and Note 3.

The meaning of Eubulus' policy now becomes clearer. So long as large sums could be voted by decrees of the People, suddenly inflamed by fiery oratory and encouraged to declare war, there was no security for his plan of rehabilitating the fleet and the defences, and so making effective provision against attack. Little harm could be done by the prohibition of such votes, so long as he and his friends occupied all the financial offices, and took care in the annual Budget to provide sufficiently for these measures of defence and for the public improvements which he wished to carry out, thus including all the military expenditure which they contemplated within the Budget, instead of leaving it to fall on the surplus. By such careful budgeting Eubulus was able to provide for all the needs of the State (assuming that actual war could be avoided), and to satisfy the People by the distribution of the surplus which remained when all other requirements had been covered. For obviously he was forced to do something to reconcile the masses to the abandonment of an imperialistic policy. To abandon such a policy was contrary to their natural sentiment; and orators who flattered their pride by reference to the glories of the past, and kept their ambition in a state of activity, increased the force of this sentiment. But the distributions of theoric money could be utilised as a kind of premium of insurance¹

¹ The metaphor is borrowed from Beloch, *Attische Politik*, p. 178.

against interference with his plans of retrenchment and repair of the defences. It was not without reason that Demades spoke of these distributions as the "cement of the democracy."

The policy of Eubulus is thus quite intelligible; its aim was in itself a good one, and the ability which he displayed in carrying it out was remarkable. Yet its weakness is also clear. In the first place, he assumed too readily that it would be possible to avoid war for a considerable time; and he was so reluctant to abandon the delusion that, as we shall see, he postponed taking action, when war was forced upon him, until it was too late.² In the second place, no argumentation can get over the fact that sums which might have gone to constitute a strong reserve were thrown away upon amusements which had acquired a disproportionate importance in the life of the people. Lastly, a policy which might be justifiable and advantageous when controlled by strong and able hands, might become disastrous under a weaker leader, or through popular pressure. The temptation for the People to demand, and for the demagogue to grant, increased sums for such distributions, and so to starve the administration, might become irresistible; and we cannot entirely refuse to listen to the contemporary writers who re-

¹ With the same end in view, Eubulus increased the attractions of some of the festivals, and there with his own popularity; comp. Dem., Olynth. III, § 31, where the grant of special processions at the Boëdromia is mentioned.

² See below, Ch. VI.

garded Eubulus as encouraging the People in idleness and pleasure, to an extent which rendered them unready for courageous and patriotic service when it was most needed. "Eubulus," says Theopompus,¹ "was a demagogue conspicuous for his care and industry; he provided a great amount of money, and distributed it to the Athenians, with the result that under his leadership the city became thoroughly cowardly and idle"; and Aristotle's strictures² upon the practice of distributing surplus funds to the People have obvious reference to Eubulus. "The multitude receives the money to-day, and is as badly off as ever to-morrow; and to support the poor in this way is like pouring water into a broken pitcher."

It may be argued in reply that the People were already so far enervated and demoralised that the action of Eubulus was the effect rather than the cause of their moral weakness; and that in recognising the fact as it was, he was doing the best thing that the circumstances permitted. Yet (apart from the question whether the People were by this time so hopelessly demoralised as this implies) it is difficult not to feel that his policy was somewhat cynical; it was certainly destitute of any such high ideal as Demosthenes constructed for himself on a foundation of Athenian traditions, hoping as he did that he would be able to persuade his countrymen not merely to applaud patriotic sentiments when they fell from the lips of their

¹ Fr. 91 (Oxford Text).

² *Ar., Pol.*, VI (VII), p. 1320a.

orators, but also to face the hard work and self-sacrifice which were necessary if sentiment was to be translated into action. The success, however short-lived, of Demosthenes in this aim shows that the idea was not a chimerical one.

But at the moment when he first came into power, Eubulus was almost certainly right. Retrenchment and repair of the defences and the fleet were absolutely necessary, whether they were accompanied by distributions of money or not. It was very desirable to avoid war, if possible; and the proposals which Demosthenes made in his next two public speeches, high-spirited and patriotic though his intentions were, were almost certainly mistaken. It will be convenient to consider these at once, though they fall rather later in time than some of the events which must be narrated in the next chapter.

The first arose out of affairs in the Peloponnese. Here for the last ten years, Sparta had been waiting quietly for an opportunity to recover her power; and in 353 such an opportunity seemed to have occurred. Since 355 the Thebans, who had previously supported the enemies of Sparta in the Peloponnese, had been engaged in the Sacred War (of which more is to be said hereafter) against the Phocians. They were thus less able to help their friends in South Greece. The latter therefore turned towards Athens for support and (probably in the last year of Aristophon's leadership) were.

received favourably. The Messenians in particular received a solemn promise of Athenian aid, in event of any attempt on the part of Sparta to violate their independence.¹ In 353 the Spartans, with no little ingenuity, made a proposal to the other Greek States that there should be a restoration of territory to its original owners. The proposal was bound to meet with some support in Athens, since its acceptance would secure the recovery of Oropus, which had been held by Thebes since 366, and the restoration of the towns friendly to Athens in Boeotia—Thespiæ, Plataeæ, and Orchomenus. Of the Peloponnesian States, Elis would be attracted by the prospect of recovering Triphylia from the Arcadians, Phleius by that of the restoration to them of Tricarantum, which was now occupied by the Argives. Sparta herself would then obviously claim to recover her dominion over Arcadia and Messenia, and would expect the support of the other States who had benefited by the restoration to them of their own former possessions.

When the discussion in the Assembly took place, and embassies both from Sparta and from Megalopolis had been heard, the question was very warmly debated. In favour of the Spartan proposal were the bitter feeling of most of the Athenians towards Thebes, the desire to recover Oropus, and the reluctance to break with the Spartans, who had fought side by side with the Athenians at Mantinea and elsewhere. Demosthenes, though he

¹ Paus. IV, xxviii., §§ 1, 2.

professed to be impartial in comparison with previous speakers, supported the Arcadian appeal, on the ground that the interest of Athens required that a balance of power should be maintained between Sparta and Thebes, and that the Spartans would gain too great a preponderance, if they were permitted once more to be overlords of Messenia and Arcadia. Besides this, Athens was already pledged to support the Messenians; and to accede to the Arcadian appeal would be in effect to prevent the Spartans from committing aggressions in either quarter. At the same time, the alliance with the Arcadians must be frank on both sides, and the Arcadians on their part must formally renounce their alliance with Thebes. It was not likely, Demosthenes argued, that Sparta would actually go to war; and even without yielding to the requests of Sparta it would be possible—and that, even with the help of Sparta herself—to recover Oropus and to demand from Thebes the restoration of the suppressed towns. On these latter points, Demosthenes' argument is very unconvincing, resting as it does on the assumption that Sparta was interested, not in the recovery of her Empire, but in giving effect to general principles of justice—the very thing which he himself denied, in denouncing the unscrupulous part which Sparta was playing.¹

¹ Both in this Speech and in the next, Demosthenes shows that he has not yet fully grasped the importance of distinguishing an abstractly possible argument from a good one. Increased knowledge of affairs remedied this defect.

As regards the main question, there can be little doubt that to make alliance with the Arcadians would really have involved serious risk of war with Sparta, and probably also with Thebes. Even if Sparta had recovered her dominion in the Peloponnese, it would not have harmed Athens, since in case of war the Peloponnesian subject-States would have been certain to turn against Sparta once more. From the point of view of Athenian interests, in the existing circumstances, Eubulus' policy of non-intervention was undoubtedly the safer. On the other hand, it is impossible not to appreciate the higher grounds upon which Demosthenes rested his case—fidelity to the promise given to the Messenians, and the traditional attitude of Athens towards the victims of others' aggressions; and in a sense, future events afforded a certain justification of his policy. For when the Athenians had rejected the Arcadian alliance, a temporary relief from the pressure of the Sacred War enabled Thebes to send help to the Arcadians, who became more closely connected with Thebes than ever, and, a few years later, like the Thebans, became allies of Philip, all the efforts which the Athenians then made to obtain their support proving unsuccessful. Hostilities were carried on inconclusively between Sparta and the Arcadians for two or three years, until in 350 a Peace was made, by which the Arcadians retained their independence. The conception which Demosthenes had put forward of the duty of Athens

towards the injured appears again in his Speech in defence of the Liberty of the Rhodians. At the end of the Social War in 355, Rhodes, which had been one of the leading cities in the revolt, fell into the hands of Mausolus, King of Caria—a vassal of Persia, who had assisted the allies against Athens. He fostered an oligarchical conspiracy in the city. The democratic party were driven into exile, and the oligarchs, who acted with cynical brutality,¹ maintained their position by means of the Carian garrison. Similar events took place in Cos; and Athens thought it necessary, as a precaution, to strengthen the band of Athenians resident in Samos.² In 351 (or possibly a year or two earlier)³ the Rhodian exiles sent a deputation to Athens, asking for help and restoration—in other words for the liberation of the island at once from the oligarchy in possession and from the power of Artemisia, who had succeeded (probably in 353) to the throne of her brother and husband Mausolus. The Athenians were little inclined to accede to the request. This same democratic party had led the revolt against Athens in 358, and popular feeling rejoiced over their misfortune. Demosthenes, however, urged the Athenians to forget their grudge, to take up their traditional rôle as protectors of democracies everywhere, and to remember the risk to which Athens herself would be exposed, if oligarchies

¹ Theopomp., fr. 118 (Oxford Text).

² Dionysius, *de Dein.*, ch. xiii.

³ Note 4.

were established in all the States of Greece, and the Athenian democracy were left alone. The recent disasters suffered by Artaxerxes in Egypt, he argued, made it unlikely that either he or Artemisia would seriously oppose the re-establishment of Athenian influence in the island.

There can, however, be little doubt that Demosthenes underrated the danger of war with Caria or Persia, if Athens interfered in Rhodes. In any case, such interference was directly contrary to the policy of Eubulus, with whom on this occasion the People as a whole was in sympathy. The generous, though probably impolitic, appeal of Demosthenes failed; and several years later he speaks¹ of Cos and Rhodes as still subject to Caria. Artemisia herself died shortly afterwards, of grief (so it is said) for the death of Mausolus.²

The air of impartiality which Demosthenes studiously affects in the three speeches to the Assembly which have now been considered makes them appear comparatively tame and in places academic in tone. But now and then, as we have seen, the idealist in him breaks out, and he demands that Athens shall play a part worthy of her past. He parts company, however, with the vulgar jingoism of the popular orators of the day, in his insistence that such a policy involves personal work for each individual citizen, and that patriotic sentiment without personal self-sacrifice is useless.

¹ *De Pace*, § 25.

² Theopomp., fr. 275 (Oxford Text), etc.

In the last of the three speeches¹ he emphasises strongly both the breach with Athenian tradition made by his opponents, and the difficulty of rousing his audience to act upon the principles which they professed. It is true that in dealing both with the Arcadian and with the Rhodian appeal, he advocated the policy which was probably unwise at the moment; it would have been very ill-advised to divert into other channels the forces and the funds which were certain to be needed before long against Philip. Demosthenes had still much to learn as a politician. But the significance of these early speeches in relation to his career as a whole lies (in spite of one or two touches of almost cynical opportunism,² which may have been designed to commend him to the Assembly as a man of the world) in the growing sense of national duty which they reveal; in the plain enunciation of certain important principles, such as the doctrine of the Balance of Power, and the assertion of the necessary hostility of monarchies and oligarchies to a democracy like the Athenian; and in the appeals which he makes to the lessons of the past. In these points these speeches form the first of a long series in which the same ideas can be traced.

The trial of Timocrates, the colleague of Andro-
tion in the Commission for recovery of arrears of

¹ *Pro Rhod.*, §§ 25-33; comp. Isocr., *de Pace*, § 30.

² *E. g.*, *pro Megal.*, § 10; *pro Rhod.*, § 28.

taxation, whose proceedings have already been described, requires a brief notice, if only because it illustrates certain remarkable features of Athenian public life. As in the trial of Androtion—of which the case may be considered a sequel—the speech of the prosecutor Diodorus was written by Demosthenes.

In 355 the Athenians sent an embassy to Mausolus, King of Caria, perhaps to protest against his action in assisting the rebellious allies of Athens or in interfering in the affairs of Rhodes. The ambassadors were Androtion, Melanopus, and Glaucetes; the ship on which they sailed was commanded by Archebius and Lysitheidēs. On the way they captured an Egyptian merchant-vessel, which they brought to Athens. The Assembly decided that as Athens was on friendly terms with the King of Persia,¹ and Egypt was in revolt against him, the Egyptians were enemies of Athens (though in fact they had but recently been assisted by Athenian generals and soldiers), and the vessel was therefore a lawful prize. Accordingly the prize-money ought to have gone to the State, and the two trierarchs were legally responsible for paying it over. After some time Euctemon denounced them to the Commission recently appointed on the motion of Aristophon to enquire into debts to the State, for their failure to account for the sum, which amounted to nine and a half

¹ The recall of Chares in the previous year was nominally based on the same assumption.

talents; and subsequently proposed a decree that payment should be required from them, but that as the money was admittedly in the hands of Androtion, Melanopus, and Glaucetes, the trierarchs should be allowed to argue before a court the question, whether they or the three ambassadors were liable. Androtion failed to convict Euctemon's decree of illegality; and the three tried various devices for evading payment, but in vain. At last, in 353, they found themselves in the position of having to pay the debt at once, or to be condemned by a court to pay a sum which would amount to about treble the original debt; in the latter alternative they would be imprisoned till the sum was paid. They therefore got Timocrates to propose a law that any debtor to the State who had been sentenced to imprisonment (as well as to repayment) should be permitted to give bail by himself or his friends for the amount of the debt, and allowed until a month before the end of the current year to discharge it; after that period his bail should be escheated, and himself imprisoned. In order to smuggle the law through, a certain Epicrates was induced to propose in an Assembly in the middle of July, 353, a decree that the Nomothetæ should be summoned next day, on the pretext that insufficient funds had been voted for the Panathenæa. The Nomothetæ met; nothing was done in regard to the Panathenæa; but Timocrates' law was somehow passed. Diodorus and Euctemon prosecuted Timocrates for the

alleged illegality of the law; and the trial probably took place early in 352. There can be no doubt that the law was illegal, and was merely a device to enable Androtion and his colleagues to postpone the evil day. The relevant arguments of Demosthenes on this point are conclusive. It is therefore all the more pity that he should in this Speech (as in that against Leptines) have used other arguments directed against consequences which no one would have dreamed of expecting from the law, and which could only be inferred from it (if at all) because it had been hastily and overwidely drafted.¹ He strains every point against Timocrates and Androtion in a way which is at least disingenuous, and which certainly makes a bad impression.² At the same time, the knowledge of law and the sureness of touch which he shows are remarkable, and here and there a striking and vivid piece of writing foreshadows some of the best of his later work.³

We do not know what the result of the trial was. If Timocrates was condemned to a fine, it is probable that it was not so heavy as to force him to go into exile; as he is generally supposed to be the Timocrates who supported Meidias against Demos-

¹ Esp. §§ 79-101.

² The text of the Speech as it stands appears to be a conflation of two speeches, or of two recensions of the same Speech; but its exact history cannot be certainly reconstructed. Part of the Speech consists of a repetition of a considerable section of the Speech against Androtion, with very slight alterations.

³ *E. g.*, § 208, much admired by Longinus.

thenes some years later. Androtion and his colleagues had actually paid the sum due from them before the trial of Timocrates began¹; and though this would not purge Timocrates' guilt in proposing the law, it might mollify the jury when the penalty had to be fixed. Androtion himself was still active in Athens in 346.²

NOTES ON CHAPTER IV

1. No proposal might be made in the Assembly which was inconsistent with the existing laws. The proposer of any such motion was personally liable to prosecution (though only within the year), and the law might be repealed at any time after a trial before a jury. The rule was a safeguard against inconsistencies in the law, and against the risk which the People ran of being misled by an able orator into passing measures contrary to their own will, which was assumed to be embodied in the existing law.

2. The ultimate object of the law of Leptines is not very clear. It can hardly have been an important measure of finance. It is true that the preamble stated that it was enacted in order that the richest men might have to undertake the burdens; and that some of those who enjoyed immunity must have been more or less wealthy men. But they were comparatively few in all; the relief given to the rest by the distribution of the burden among a slightly increased number would be slight; and the general revenues of the State would gain nothing. Nor can the law be accounted for by a dislike on the part of the democracy for hereditary privileges. Most of the grants of immunity were indeed made to a man's descendants as well as to himself; but there is no evidence to show that the Athenians thought of the extension of a compliment to the descendants of a distinguished servant of the State as inconsistent with democracy. It is much more likely that there were notorious cases of the privilege being enjoyed by the undeserving; or that it had been much granted

¹ §§ 187 ff.

² *C. I. A.*, iv., 109b (Dittenb. Syll. Ed., ii., No. 129).

of late to persons (such as powerful generals) of whom the democracy was suspicious.

3. See Francotte, *Les Finances des Cités Grecques*. Francotte's account of the law and policy of Eubulus is the most satisfactory that I have seen. He notes that the law was occasionally evaded by passing, not decrees, but special laws, dealing with small necessary expenses, grants of crowns, etc., and that it might be evaded in small matters in various other ways. But the proposal of a large vote for purposes of war would have certainly been followed by prosecution.

4. Dionysius places the Speech for the Rhodians in 351. Butcher and others would date it a year or two earlier, on account of the comparatively slight mention of Philip, which they suppose to be too casual for the year of the First Philippic. But the allusion to Philip shows that in the speaker's opinion, though not in that of his opponents, Philip is a very formidable foe. The other arguments for an earlier date are even less convincing.

CHAPTER V

THE RISE OF PHILIP

BEFORE some of the events narrated in the last chapter had taken place, the great struggle between Athens and the royal house of Macedonia had begun.

The Macedonians of antiquity were a mixed race, and the degree of kinship between them and the Hellenic peoples is a matter upon which no agreement between scholars has been attained. The Macedonians proper lived on the low lands watered by the Axios and the Haliacmon, between the mountains and the sea, with Pella for their capital, though the more ancient centre, and the burial place of their kings, was *Ægæ* or *Edessa*.^{*} They were a more or less settled agricultural people, whose lands provided for them the necessities of life, and who engaged comparatively little in foreign trade. They were the subjects of an absolute monarchy of an almost Homeric pattern, holding their lands at the pleasure of the King, giving him military service at his command, and in every way bound to do his bidding, except

^{*} Now *Vodhena*.

that in matters of life and death the assembly of fighting men appears to have had a right to give the final decision, and the will of the same body was at least as influential as the right of birth in determining the succession. But in the upper valleys, and among the mountains, there dwelt a number of tribes—Lyncestæ, Orestæ, Elimiotæ, and others—governed by princes of their own, nominally indeed subordinate to the King of Macedonia, but restless and always liable to rebel. These were probably nearly akin to the Illyrians who lived to the westward of them (between them and the Adriatic), and to the Pæonians on the north of Macedonia. There is also some evidence of the existence of Thracian stocks within Macedonia itself.

That the royal house of Macedonia was at least partly Hellenic by descent had been admitted in the fifth century B.C., by the officials of Olympia,¹ who allowed the Macedonian prince, Alexander, to compete in the Olympic games—a privilege strictly confined to Hellenes. But with regard to their subjects there was always a doubt. On the one hand, there was a tradition that they, or some of them, had migrated from Greek lands into Macedonia. On the other, they were often spoken of as barbarians, because they were backward in culture, and their dialect was difficult to understand. (There was the same doubt about the peoples of Epirus and inner Ætolia, and for similar

¹ Herod., v., 22.

reasons.) The remains of the Macedonian dialect are too meagre, and the extent of its borrowings from the vocabulary of the Greeks proper too uncertain, to justify any conclusion as to the nationality of those who spoke it; and we have to be contented at present with the probability that they were in some degree akin to the Hellenes on the one side and the Illyrians on the other, and that the two stocks (and perhaps others with them) were blended in varying proportions in different localities.¹

In one respect the Macedonians afforded a strong contrast to all but the least advanced Greek peoples, namely, in the fact that their organisation was a tribal and quasi-feudal one, and did not, as with the Greeks, centre in city-states.² The Macedonians proper, as distinct from the hill-tribes, appear to have been organised primarily for military purposes. The greater number of the able-bodied land-holders made up the infantry or "foot-guards"³; and a smaller body of wealthier and more honourable men composed the cavalry, or "Companions" of the King.⁴ At the time of Philip's accession the Companions may have numbered some six hundred. Of these a specially selected group—probably under a hundred—were "Companions of the King's person"⁵; and the highest ambition of the Macedonian was to attain a position in this group. But in this organisation the hill-tribes had no part.

¹ Note 1 at the end of the Chapter. ² The unit was the *ξθνος*, not the *πόλις*. ³ *πεζῆταιροι*. ⁴ *ἑταῖροι*. ⁵ *οἱ ἀμφ' αὐτὸν ἑταῖροι*.

On the sea-coast the freedom of action of the Macedonians was held in check by the Greek colonies planted there. In the time of the Peloponnesian War the King, Perdiccas II., had failed, in spite of his political ingenuity, to shake off these fetters. His successor, Archelaus, had made efforts to modernise his kingdom, building roads and chains of forts, and probably attempting to unite the unordered elements in his kingdom by combining all in one national army. He was an admirer of Greek culture, and encouraged the literary men of Greece to frequent his Court. Euripides and Agathon ended their days there; Timotheus the lyric poet and Zeuxis the painter also visited Pella; Socrates was invited thither, but declined to go. But the efforts of Archelaus had little permanent success, and in the confusion which followed his death in 399, the advance which had been made towards a higher civilisation was neutralised. The coastward towns, Olynthus, Acanthus, and Amphipolis, increased in power, and in spite of a temporary set-back, owing to the intervention of Sparta in 379,¹ the Olynthian League grew powerful and continued to act as a barrier in the way of Macedonian ambition.

Amyntas III., whose reign lasted (though not without interruptions) from 393 to 369, was generally on terms of friendship with Athens, and, as we have seen,² acknowledged her title to Amphipolis. He married the Lyncestian princess Eurydice,

¹ See above, p. 48.

² p. 53.

who bore him three sons—Alexander, Perdiccas, and Philip, who was born in 382. Alexander, who succeeded Amyntas in 369, was murdered after a reign of a year; and the young Perdiccas only secured the throne from the pretender Pausanias by the intervention of Iphicrates, who was invoked by Eurydice. At the beginning of the reign of Perdiccas III., Ptolemy of Alorus, the son-in-law and paramour of Eurydice, acted as regent; and when (in 367) the Theban general Pelopidas advanced from Thessaly to Pella, Ptolemy made an agreement with him, and was obliged to give Philip, then fifteen years old, with other hostages as a security for its fulfilment. Philip was taken to Thebes, and lived there in the house of Pammenes until 364, when he was released and returned to Macedonia. Perdiccas, like Archelaus, was inclined towards literature and philosophy, and Euphræus, a pupil of Plato, was for a time his principal adviser.¹ But in spite of the help given to him by Iphicrates, and of a short-lived alliance with Athens which Timotheus persuaded him to make, he gave his support to Amphipolis in her struggle to hold out against Athens. In 359 he was killed in a rising of the hill-tribes, perhaps instigated by Eurydice herself, in revenge for the murder of Ptolemy by the King's orders.²

¹ Comp. Athen., xi., p. 508e. οὕτω ψυχρῶς συνέταξε τὴν ἑταιρίαν τοῦ βασιλέως ὥστε οὐκ ἐξῆν τοῦ συσσιτίου μετασχεῖν, εἰ μὴ τις ἐπιστάιτο τὸ γεωμετερεῖν ἢ τὸ φιλοσοφεῖν. For Euphræus, see Phil., III, § 59, and below, p. 325.

² So Justin, VII, v.

The Macedonians first proclaimed his infant son King, with Philip as regent; but very soon, in view of the need of a strong hand, they transferred the kingship to Philip himself, who accepted it, we are told, under compulsion.¹

Philip was still only twenty-three years of age; but his early life had taught him lessons by which he had profited to the full. He had learned that success could only be achieved by a strong hand, and that if he was to reign over Macedonia in security he must not be over-scrupulous as to means. His sojourn in Thebes had given him an opportunity for observing the successes and methods of Epameinondas and Pelopidas—the one a unique embodiment of commanding military genius and high culture, the other the most reckless and daring soldier of his age. He had learned to appreciate the almost unbounded opportunities which lay open to a strong man in the Hellenic world, as it then was; and he had become familiar with the recent improvements upon the traditional organisation of Greek armies. He had learned that the leader of a strong army, who could attach his men to himself by sentiment as well as by interest, and could not only hold his force together by discipline, but could develop methods of fighting which would give it an immediate advantage over those who followed more conventional lines, was practically certain of success.

Moreover he was the man for his task. Fear-

¹ *Compulsus a populo* (Justin, VII, v.).

less and resolute; not to be turned aside by a defeat here and there, or by any misfortune to his own person; discerning and clever in dealing with different kinds of men and States; never eager to secure in haste what might be better secured by patience, or to use force where fraud would serve, he was entirely fitted for the execution of an ambitious and far-reaching policy in that age. Besides this, he was personally attractive, not only to the rough Macedonian soldiers, with whom he mingled freely on familiar terms, but also to the cultured representatives of the Greek States, who were sent to treat with him. He had learned at Thebes, among other lessons, to appreciate Hellenic literature and refinement; he encouraged dramatic artists to visit his Court at Pella; and, when the time came, he engaged Aristotle himself as the tutor of his young son Alexander. He was an able and persuasive speaker, and the orators of Athens themselves felt the power of his adroit eloquence.¹ Though he indulged freely in the coarser vices, he confined his indulgence for the most part to seasons when it could not interfere with his plans; and it in no way affected either his own hardiness—his constitution was of iron—or his requirement of similar hardiness from his soldiers. He used money no less skilfully than other means of persuasion to effect his purposes; his generosity was lavish, and it was believed by later generations that his victories were won with

¹ Æsch., *de F. L.*, §§ 42, 43, etc.

gold as often as arms. That he employed deception to achieve his ends cannot be doubted, though his faithlessness on certain occasions was certainly exaggerated by Demosthenes. The rectitude of ancient and modern critics may deplore some of the methods which Philip used, and the licenses which he permitted himself in his private life.¹ But deceit and corruption are not so entirely unknown in modern political warfare that we can afford, on account of his use of them, to refuse all admiration to a strong man, who, with every instrument thoroughly at his command, played his great game with skill, precision, and courage, and seldom mistook either the men with whom he had to deal, or the surest method of dealing with them.

How soon Philip conceived the policy which it was his life's work to carry out, we do not know. Doubtless the necessity of reorganising the army and improving its methods of fighting presented itself first. Before long he may have determined upon the conquest of the Hellenic world; and in any case he must have been aware from the first that Macedonia could not be perfectly independent, so long as she was hemmed in by Hellenic colonies out of his control, and by warlike and restless tribes, not yet subdued. The idea of the conquest of the Nearer East probably grew in his mind later, when his army had reached its full efficiency, and his lordship over Greece was as good as

¹ Note 2.

achieved. It may even have been suggested by Isocrates.

However this may be, the organisation of the army was his first task. By the formation of regiments on a territorial basis, bound together by a local patriotism which was to lead to a more comprehensive national spirit; by offering new prospects of promotion from one rank in the army to another, and so appealing to the ambition of the individual soldier; by attaching the higher ranks above all, but all ranks in ascending degrees, to his own person; he created a united national force, which he drilled into efficiency by relentless practice as well as by experience in actual warfare. The introduction of a longer spear for the use of the infantry gave his phalanx a great advantage when meeting the enemy: his cavalry, brought to the highest pitch of mobility, were frequently so employed, under his skilful generalship, as to determine the issue of battle by their action at critical moments, and were given an importance which cavalry had seldom possessed in Greek warfare; he further availed himself of the great improvements in siege-instruments which the engineers of the day devised; and his cavalry and infantry were supplemented by archers and light troops of other descriptions, so as to be prepared for every contingency.¹

Above all, Philip's army was kept together as

¹ On Philip's army, see Hogarth, *Philip and Alexander of Macedonia*, pp. 50-64, etc.

a standing force. At first this may well have caused some discontent, and there may be some truth in the account which Demosthenes gives in the Second Olynthiac of the state of feeling in Macedonia.

You must not imagine [he says], men of Athens, that Philip and his subjects delight in the same things. Philip has a passion for glory—that is his ambition; and he has deliberately chosen to risk the consequences of a life of action and danger, preferring the glory of achieving more than any King of Macedonia before him to a life of security. But his subjects have no share in the honour and glory. Constantly battered about by all these expeditions, up and down, they are vexed with incessant hardships; they are not suffered to pursue their occupations or attend to their own affairs; and for the little that they produce, as best they can, they can find no market, because the trading stations are closed on account of the war.

In the same Speech, Demosthenes speaks of Philip's jealousy of any credit ascribed to his subordinates; and Polyænus¹ relates that Philip professed to prefer victories won by diplomatic conversations to those secured by arms, because the glory of the latter had to be shared with others, while that of the former was all his own. But we know that Philip in fact recognised to the full the qualities of Antipater and Parmenio, his principal generals; there is no other evidence,

¹ Polyæn. IV, ii., § 9.

apart from Demosthenes' statements, to suggest any disunion of spirit between Philip and his men; and it would seem to be one of Philip's greatest distinctions, that before long he did make his subjects feel that they had a share in the honour and glory, and that their interest was not at strife with their loyalty to himself. In any case, the possible inconveniences of a standing army, equipped with every kind of force, were more than counterbalanced by the immense advantage which it gave him over his enemies. "It is not," says Demosthenes, "as commander of a column of heavy infantry that Philip can march wherever he chooses, but because he has attached to himself a force of light infantry, cavalry, archers, mercenaries, and a miscellaneous camp. . . . Summer and winter are alike to him, and there is no close season during which he suspends operations."¹ And again, "with a standing force always about him, and knowing beforehand what he intends to do, he suddenly falls upon whomsoever he pleases; while we wait until we learn that something is happening, and only then, in a turmoil, make our preparations."² His own position of absolute command was an even greater element in his success; and upon this also Demosthenes lays some stress.³ In short, it must soon have been plain, both to his admirers and to those who

¹ Phil. III, § 49.

² *De Chers.*, § 11; comp. *de Cor.*, § 235.

³ *E. g.*, Olynth. I, § 4; *de Cor.*, § 235.

dreaded him, that any who would resist him had to deal with a man of extraordinary genius, who had won for himself a position of extraordinary advantage.

At the beginning of his reign it was necessary for him to move with caution. His claim to the throne was disputed by more than one pretender. But he had the support of the Macedonian army, which he had won over by eloquent language, and he rid himself of his rivals without serious difficulty. One of them, Argæus, had been assisted by Athenian troops. It was not, however, a convenient moment for Philip to enter upon a quarrel with Athens. His own forces were not yet in order—the Athenians had shown signs of reviving strength in this very year, in the recovery of their supremacy over the Chersonese, and he himself had to face an immediate struggle with the hill-tribes of Pæonia and Illyria. He therefore assumed an attitude of generosity, and sent back to Athens, without demanding any ransom, the Athenian citizens whom he had taken among the defeated supporters of Argæus. At the same time he sent an embassy to Athens,¹ asking for peace; and since the Athenians had given their aid to Argæus on the understanding that Argæus

¹ Dem., in *Aristocr.*, § 121; Diod. XVI, iii., § 4; Justin, VII, vi. [Diodorus and Justin are the principal continuous authorities for the remainder of this chapter; but many statements rest on passages of Demosthenes (esp. in the *Olynthiacs* and *Philippic I*) and other orators, and on allusions in various writers. The more important references to these are given.]

would restore Amphipolis to them, he found it convenient to recognise the Athenian claim to the town, in order to obtain for the moment a Peace which he had no intention of keeping. It was fortunate for him that the Athenians failed to take the obvious step of garrisoning Amphipolis without delay, and that within a few months they became involved in war with their allies, and so had little opportunity for attending to their interests elsewhere.

Accordingly, after a campaign against the Pæonians and Illyrians, in which the new tactics were employed with complete success, and a large district was added to his kingdom, Philip returned to the coast (late in 358), appeared before Amphipolis, which had given him some provocation,¹ and demanded its surrender. The Amphipolitans at once despatched Hierax and Stratocles to Athens to ask for help. To counteract their appeal, Philip wrote a letter to Athens, explaining that he was attacking the town with the intention of placing it in the hands of Athens. In reply to this the Athenians sent Antiphon and Charidemus to negotiate with him; and it was arranged that if he gave up Amphipolis to Athens, he should receive Pydna from Athens in its stead. This arrangement was very discreditable to the Athenian representatives. Pydna, though it had been a Macedonian possession until Timotheus won it over for Athens about the year 364, was an ally

¹ Diod. XVI, viii., § 2.

of Athens, and might well claim to be consulted before being surrendered to Philip; and so the nature of the bargain was kept secret, lest it should become known at Pydna; the Athenian People were only informed in vague terms that an understanding had been arrived at. Philip had now secured the support of a party in Amphipolis; and it was by their treachery, as well as by means of his engines, that he took the town, probably in the autumn of 357.¹ A scholiast says that after its capture he at once put the traitors to death, on the ground that they were not likely to be more faithful to him than they had been to their own fellow-citizens. He then banished all who were hostile to him in the town.

So confidently did the Athenians expect to receive Amphipolis, that when the Olynthians, alarmed at Philip's success, appealed to them for aid against him, they would not listen. In consequence of this, the Olynthians tried to secure themselves by making an agreement with Philip himself; and it was quite in accordance with his plans to accede to their overtures, and to make a Peace which was destined to last until it should be convenient to him to crush them in their turn. It was provided in the agreement that the Olynthians should not make terms with Athens apart from himself.²

¹ Dem., Olynth. I, § 5.

² Dem., in *Aristocr.*, § 108; Olynth. II, § 14; Phil. II, § 20, etc.

THE TEMPLE OF HERA, AT OLYMPIA

PHOTO BY ALINARI

How the Athenians expected to be able to give Pydna to Philip was never disclosed; for Philip, instead of waiting for the fulfilment of their promise, himself took possession of Pydna by force (assisted by treachery from within) and refused to give up Amphipolis. He next joined the Olynthians in an attack upon Poteidæa. This was one of the most important towns of the Chalcidic peninsula; it had long been a rival of Olynthus; and a large body of Athenian colonists was established there. Its capture was rendered easy by treachery from within; and the Olynthians received from Philip both it and also Anthemus, and profited greatly by the cultivation of the territory which he added to their own, and by the increase in their trade.

The Athenians had, in spite of the Social War, resolved to send an expedition to relieve Poteidæa, but it did not start in time.¹ Philip, nevertheless, allowed the Athenians whom he captured in the town to depart without ransom. He was not yet ready to take measures which might exasperate Athens; even in besieging Poteidæa he was nominally acting as the ally of the Olynthians; and, as we have seen, he gave up the town to them. It was just at this time that he received three messengers with good tidings. The first told him of a victory of his general Parmenio over the Illyrians; the second of the success of his force in the Olympian games; the third of the birth of his son Alexander.²

¹ Phil., I, § 35, etc.

² Plut. *Alex.*, iii.

At about the same time Philip was enabled to satisfy the want of money which was pressing heavily upon him. His occupation of Amphipolis opened the way to the gold-mines of Mount Pangæus, east of the Strymon, which were being worked at the time by settlers from Thasos: and he took advantage of an appeal made to him by these settlers, when hard pressed by Thracian assailants, to occupy their town, Crenides, and to enlarge it into a city which he named, after himself, Philippi. He at once began to work the mines, and from this time onward they provided him with a large and steady income, which before long amounted to as much as one thousand talents a year. The Athenians, hampered by the Social War, were unable to take any active steps to check his advance. They made an alliance, indeed, in 356,¹ with the Pæonian Lyppeius, the Illyrian Grabus, and the Odrysian prince Cetriporis, the eldest son of Berisades, to whom (in the division of his father's share of the Odrysian kingdom which took place on his father's death) there fell the western portion, including the district in which Amphipolis and Crenides lay. But Cetriporis could not retain the district against Philip, and in 355 Philip made a victorious campaign against the Pæonians and Illyrians. Moreover, his conquest of the district east of the Strymon enabled him to take advantage of its luxuriant forests to provide himself with timber, with which

¹ *C. I. A.*, II., 66.

to build a fleet—an absolute necessity if he was to maintain his hold on the coast, and to resist the Athenians on their own element. His occupation of the coast-town Datum, which Callistratus had re-founded (in conjunction with settlers from Thasos) when he was expelled from Athens, gave him a convenient naval station. He was now able to interfere with Athenian trade, and also to occupy convenient islands, which had hitherto been infested by pirates. Before the end of 355 he had rid himself for the time of all danger from the newly-made allies of Athens, and was in a position to renew direct operations against Athenian interests on the coast of the Thermaic gulf; and he could now dispense with the pretence of acting as the ally of Olynthus.

He accordingly laid siege to Methone, which was the last important Athenian town on the gulf, and was used by the Athenians as a naval base. (It had been brought within the Athenian alliance by Timotheus about ten years before.) The siege probably began in the last months of 355.¹ The town made a brave resistance, but was at last forced to surrender. In the course of the siege an arrow deprived Philip of the sight of his right eye. The citizens were allowed to depart free, but with only one garment apiece, and their territory was divided among Philip's followers.

Philip was now master of the whole coastline of the Thermaic gulf, as well as of the seaboard from

¹ Note 3.

the east side of the Chalcidic peninsula to a point perhaps fifty miles or so beyond Amphipolis. He had ample supplies of money and ships; and his army had so far proved irresistible. Athens, on the other hand, had lost all the stations which she had possessed on the coasts of Macedonia and Chalcidice, and had been unable to give any effective help to her allies in those regions. Even Methone had been suffered to fall unaided; and the policy of Eubulus was to avoid so far as possible all active measures of hostility. In the period which we have now to consider, we shall see Philip pushing his conquests far along the Thracian coast, and also securing a foothold in Thessaly; until finally, there being no longer any reason for allowing the Olynthian confederacy to interrupt the continuity of his empire, he turns upon Olynthus itself. The chronology of the years 354-351 has been the subject of prolonged controversy, and the precise order of some of the events remains uncertain; but there is no doubt about the course of events as a whole.

It was probably in 353 that Philip made his next move along the Thracian coast. We have seen how in 359 the Thracian kingdom had been divided between Cersobleptes, Berisades, and Amadocus, and how, not long afterwards the Chersonese, with the exception of Cardia, had been definitely handed over to Athens by Cersobleptes, in consequence of the activity of Chares. Soon after this Berisades had died, and his share

of the kingdom had been divided between his sons, of whom Cetriporis, as has been narrated, had made alliance with Athens, but had not succeeded in keeping Philip out of the western part of his dominions. Amadocus and the sons of Berisades seem to have remained on friendly terms with Athens, but Cersobleptes was naturally anxious to get rid of them, and to reign once more over the whole Odrysian kingdom. Hostilities had, it seems, already begun, the sons of Berisades entrusting their cause to the generals Simon, Bianor, and Athenodorus.

At the same time Cersobleptes desired to effect his end without opposition from the Athenians, who just about this time (in 353), to confirm their occupation of the Chersonese, had sent a body of colonists to Sestos.¹ It is possible that at this time Cersobleptes thought of an alliance with Athens as his best resource against the probable advance of Philip. Accordingly (probably in 353) he sent Aristomachus as his representative to Athens, to emphasise the friendly sentiments of himself and his general Charidemus towards the city. Aristomachus further asserted that Charidemus and no one else would be able to recover Amphipolis from Philip, and urged the Athenians to elect him general. The suggestion was taken

¹ Chares established them in the town by force, killing and enslaving the inhabitants who resisted. Diod., XVI, xxxiv. For the chronology, see Foucart, *Les Athéniens dans la Chersonèse*, p. 28 ff., where a satisfactory solution of the difficulties is given.

up by one Aristocrates, who further proposed that the person of Charidemus should be declared inviolable, and that any one who killed him should be liable to summary arrest in any territory belonging to Athens or her allies. The proposal was cleverly contrived in the interests of Cersobleptes; for had it been passed, its effect would have been that Simon, Bianor, and Athenodorus would be afraid to act against Cersobleptes' forces, commanded by Charidemus, for fear of incurring the ill-will of Athens. The decree, however, was at once indicted as illegal by Euthycles, who engaged Demosthenes to compose his speech for him. But the trial did not take place until the summer of 352; and before that time Philip had once more made his appearance on the Thracian coast, and had seized the towns of Abdera and Maroneia.

Upon this, Cersobleptes, instead of looking any more (if he had done so previously) to Athens to help him against Philip, appears to have thought it better to come to terms with Philip himself, and so to resume his former attitude of hostility towards Athens. Accordingly he sent Apollonides of Cardia, a town which had remained hostile to Athens, to negotiate for him with Philip at Maroneia, and gave Philip securities for his fidelity. At the same time he probably hoped that Philip would espouse his cause against Amadocus; but in this he was disappointed; for Philip, finding that Amadocus intended to offer resistance, ap-

pears to have thought it better not to lose time in conquering an enemy who could be conquered at any time, but to return to Greece, where a great opportunity for extending his influence was now opened to him, in the form of an invitation to interfere in the Sacred War. (Demosthenes says¹ that, had it not been for the resistance of Amadocus, there would have been nothing to save the Athenians from having to fight without delay against the Cardians and Cersobleptes. But it is difficult to think that Philip regarded the resistance of Amadocus as important, except in so far as time would have been required to crush it.)

In the negotiations between Philip and Cersobleptes at Maroneia the Theban general Pammenes also appears to have taken some part; for Cersobleptes (so Demosthenes tells us) gave pledges "to Philip and Pammenes." Pammenes had been sent by the Thebans to support Artabazus in his revolt against the Persian King, at some time after the Athenians had compelled Chares to withdraw his assistance from him.² On his way either to or from Asia Minor, Pammenes met Philip at Maroneia. They were old friends, for Philip had lived in Pammenes' house while a hostage in Thebes; and perhaps Pammenes with his army gave Philip his support during the nego-

¹ *In Aristocr.*, § 183. (This Speech is, as before, our principal authority for Thracian affairs.)

² See above, p. 110.

tiations, at least so far as to increase the formidable appearance of Philip's host.¹

Philip now began to return homewards²; but on his way back he had to pass Neapolis, where Chares was waiting with twenty ships. (Neapolis was a member of the Athenian confederacy, situated on the coast not far from Datum, in the district already conquered by Philip; but the town seems so far to have remained independent of him. In 355 it had appealed to Athens for help,³ and Chares may have been sent in answer to this appeal.) Philip contrived to get past by a clever ruse. He sent four of his swiftest vessels in advance; Chares went in pursuit of them into the open sea, and while he was thus employed, Philip got past Neapolis in safety with the rest of his force. The four ships also escaped. (It was possibly about this time that Chares defeated the mercenaries of Philip under the command of Adæus, a general who was surnamed "the Cock." Theopompus⁴ tells us that in celebration of this victory Chares feasted the Athenians with funds given him out of the temple treasures of Delphi by Onomarchus, the Phocian general in the Sacred War, of whom more is to be said hereafter. The event must therefore be placed between Onomarchus' seizure of the treasures in 354 and his death in 352.)

The trial of Aristocrates took place in 352, and the speech which Demosthenes composed against

¹ Note 4.

² Note 5.

³ *C. I. A.*, ii., 66.

⁴ *Fr.* 241 (Oxford text).

him is by far the most remarkable which we have yet considered. Apart from the exhaustive treatment of the Athenian law of homicide, which displays the thoroughness generally characteristic of Demosthenes' legal arguments, and proves conclusively the illegality of Aristocrates' decree, the manner in which he handles the question of Athenian policy in regard to Thracian affairs as most masterly. Demosthenes argues strongly that the right policy for Athens is to prevent the absorption of power over the whole of Thrace by one man—in other words, to keep Cersobleptes in check by strengthening the rival princes and confirming them in their reliance upon Athens¹; while the effect of such a decree as Aristocrates had proposed would be to make these princes believe that Athens was veering round to the side of Cersobleptes, if she could accord such unparalleled honours to his chief minister and general. He shows also by a spirited narrative of Charidemus' career that the man himself was quite unworthy of such an honour, and that his allegiance could not be counted upon, whatever Athens might do for him. Towards the end of the Speech, he makes an onslaught upon the statesmen who were influential at the time, the party of Eubulus, denouncing them for enriching themselves while

¹ It is the same doctrine of the Balance of Power as he had applied to Peloponnesian affairs and to the case of Sparta and Thebes in the previous year, in the Speech for the Megalopolitans. (See above, pp. 132-33.)

impoverishing the State, and for degrading the democracy by accustoming it to obey their own dictates in a servile and unworthy manner.¹ The Speech has a trenchant vigour and a breadth of outlook which are far in advance of the qualities displayed in Demosthenes' earlier work; and its nobility of tone and the absence from it of all personal rancour have been generally recognised.

It has, however, been doubted whether the policy recommended by Demosthenes was the best under the circumstances. There seem to have been two alternatives open to the Athenian people at this time. The one, upheld by Eubulus and his party, was to preserve peace for the present at all costs, or at least to take no more active steps against Philip than were absolutely necessitated either by imminent danger or by the imperialistic tendency of the multitude, who were likely to insist upon some kind of retaliation against Philip's aggressions. (It was probably in view of some such pressure that Chares had been sent to Neapolis.) The possibility of avoiding war, and at the same time of holding Philip in check, might seem to be offered by an alliance with Cersobleptes. If that prince were permitted to unite all Thrace under his own sway, he would be a powerful buffer between Philip and the Chersonese, the retention of which

¹ Considerable portions of §§ 207-210 are repeated in Olynth. III, §§ 25-31. Probably Eubulus' supporters were influenced by the desire to save their wealth in supporting a peace-policy. But if some grew rich, we have no proof that they did so by illegitimate means.

was essential to Athens, since without it her corn-supply was menaced; and there was the chance that Cersobleptes would do the main part of the fighting, with the able general Charidemus to lead his forces, while Athens could continue to recruit her strength, sending only a small squadron to his support. From this point of view, the policy advocated by Demosthenes—that of rejecting the overtures of Cersobleptes—must have seemed a mistaken one.

But the alternative policy which evidently was in Demosthenes' mind had at least as much to recommend it,—the policy of keeping Cersobleptes weak by maintaining rival princes by his side in Thrace, and of preventing Philip from extending his influence in that direction, by taking such active measures against him as would keep him fully occupied nearer home. The difficulty of Eubulus' policy lay in the fact, which Demosthenes emphasises strongly,¹ that past experience had shown that Cersobleptes and Charidemus were not to be relied upon, and that no alliance with them would be certain to fulfil its object. Moreover, Athens already had engagements with the other princes. The weakness of Demosthenes' policy was that (in all probability) Athens was not yet in a condition to prosecute war against Philip with sufficient vigour to ensure success. In fact, Athens was in a position of danger, whichever plan she followed; and the difference between

¹ §§ 123-137.

Demosthenes and his opponents was a phase of the more fundamental difference in regard to the policy to be pursued towards Philip, the one side appealing to national traditions and ideals, the other to motives of prudence and to the unwillingness of the People to go out and fight in person, however excited the crowd might be at each new aggression of their enemy.

Neither policy was free from danger; neither could be certain of success; and whether we sympathise more with Demosthenes or with Eubulus, each of whom viewed the situation from one point of view, and neither of whom, perhaps, saw it whole, is a question of temperament rather than a matter to be settled by argument. The same problem recurs repeatedly in the history of the next few years.¹

We do not know whether Aristocrates was condemned for the illegality of his proposal. The decree itself, having been brought before the Council only, and not before the Assembly, would have ceased to have any force (even apart from the suspensory effect of Euthycles' indictment) at the end of the archonship in which it was passed, —in other words, even before the trial took place. But in 351 we find Charidemus among the generals of Athens, and (either late in 353, or in 352) alliance was made between Athens and Cersobleptes.

COINS OF MACEDONIAN AND THRACIAN KINGS

NOTES ON CHAPTER V

1. The best recent discussion of the subject is that by G. Kazarow, "Observations sur la nationalité des anciens Macédoniens" (*Bull. corr. Hell.*, xxiii., p. 243 ff.); in which the writer combats successfully the arguments used by Hoffmann (*Die Macedonen und ihre Sprache*) and Beloch to prove the close relationship of the Macedonians to the Greeks, and agrees with those who connect them more closely with the Illyrians. See also Cavaignac, *Histoire de l'Antiquité*, vol. ii., bk. iii., ch. iv., for an account of Macedonia. A more thorough examination of Macedonian personal and local names may some day throw light upon the ethnological problem; and it is possible that the course of political events may render Macedonia more accessible to the exploring scholar.

2. Theopompus insists (in many of the extant fragments) upon the drunkenness and immoralities of Philip and his companions. We cannot say how far he is telling the truth; but we may suspect that he was not free from the desire to draw sensational pictures with a view to edification. Polyænus, IV., ii., gives a number of anecdotes in illustration of Philip's resourcefulness and unconventionality in military matters.

3. An inscription (*C. I. A.*, ii., 70), dated about Dec. 26, 355 B.C., commends Lachares of Apollonia for bringing something into Methone; and it is not easy to explain the special merit of such an action unless the town was already beleaguered. Diodorus narrates the siege and fall of Methone twice (XVI., xxxi and xxxiv.), under the years 354-3 and 353-2 respectively. See also Kahrstedt, *Forschungen*, p. 42.

4. The circumstances of the mission of Pammenes are very obscure. The Thebans had previously been on good terms with the Persian King, and they were on good terms with him again in 351, when he sent them a present of money. Demosthenes perhaps had some inkling of the temporary alteration of their policy in 354 (Speech on the Naval Boards, §§ 33, 34). Pammenes seems soon to have been suspected by Artabazus of negotiating with the King's supporters (Polyænus, VII., xxxiii., § 2).

5. The chronology of Philip's Thracian campaign is very uncertain. Demosthenes, in *Aristocr.*, § 183, records Philip's presence at Maroneia, and the mission to him of Apollonides,

bringing securities from Cersobleptes to Philip and Pammenes; and as far as Demosthenes is concerned the date may be any time between 355 and 352, when the trial of Aristocrates took place. (Demosthenes also records Amadocus' opposition to Philip.) Diodorus apparently places Pammenes' expedition in 353-2, but does not mention his meeting with Philip. Diodorus' dates, however, are very unreliable, and the attempts to extract certainty from his history by tracing out the different authorities whose works he is supposed to have clumsily combined are very inconclusive. It is nowhere stated whether Philip's meeting with Pammenes took place on the latter's outward or homeward journey. If on the former, Philip must have made an expedition to Thrace in 354 or (more probably) 353, and the events here discussed must have occurred then, as is assumed in this chapter; if on the latter, one expedition to Thrace, in 352, after the check at Thermopylæ (see, below p. 178) will suffice; and the events in question will then be part of the same campaign as the siege of Heræon Teichos in November, 352. But the fact that Polyænus, IV., ii., § 22, speaks of Philip returning (*ἐπανήει*) after taking Abdera and Maroneia suggests that the latter alternative is the less likely of the two. The schol. on Æsch., *F. L.*, § 81, states that Philip helped the Byzantines and Perinthians and Amadocus against Cersobleptes in a dispute for the possession of territory, and made him surrender the disputed ground to them, and give his son as a hostage to himself. As Demosthenes does not mention these events, they probably fell late in 352 (after the trial of Aristocrates). Indeed the *πίστευς* mentioned in § 183 as given by Philip to Cersobleptes at Maroneia could hardly have included his son without Demosthenes noticing the fact: and these events therefore were probably part of the campaign which included the siege of Heræon Teichos (see below). On the former expedition in 353 Amadocus had resisted Philip; in 352 he fought on the same side. Possibly the Amadocus who appears in 352 was in fact the son of the opponent of Philip in 353: cf. Harpocr., s.v. Ἀμάδοκος . . . δύο γεγόνασιν οὗτοι, πᾶτηρ καὶ υἱός, ὃς καὶ Φιλίππῳ συμμαχήσων ἦλθεν εἰς τὸν πρὸς Κέρσοβλέπτην πόλεμον.

6. Kahrstedt (*Forschungen*) has attempted to prove that Demosthenes was animated throughout the years 355-351 by a desire to forward the interests of Persia; but the arguments used to prove this are very far-fetched and inconclusive.

CHAPTER VI

THE OLYNTHIAN WAR

WE have seen that after taking Abdera and Maroneia and granting terms to Cersobleptes, Philip returned homewards. He did so in response to an invitation which he had received from the princes of the ruling dynasty of Larissa to assist them against the princes of Pheræ and their allies the Phocians, and so to take part in the Sacred War. In order to understand the situation it is necessary to go back a few years.

The battle of Leuctra in 371 had given Thebes the supremacy over her neighbours the Phocians; but the latter were not content to be subjects of Thebes, and in 362 they had refused to join in the last campaign of Epameinondas in the Peloponnese; for they were still, as they had been before the battle of Leuctra, on friendly terms with Sparta. Before long the Thebans found a pretext for attempting to punish them, which would give to the attempt the colour of religious sanction.

The temple and oracle at Delphi were under the control of the Amphictyonic Council, representing a very ancient confederacy of twelve Greek tribes,

which no doubt were originally more or less equal in power, but in the course of history had come to differ widely in importance. The twelve tribes included not only the Thessalians, Boeotians, Dorians, and Ionians, and such tribes of secondary importance as the Achæans, Phocians, and Locrians, but also the comparatively insignificant Malians, Perrhæbi, Magnetes, Dolopes, and Cœnians (or Cœtæans). Each of these tribes had two votes in the Council. Athens appears to have exercised one of the Ionian votes, Thebes one of the Boeotian, Sparta one of the Dorian. The geographical position of the smaller tribes was such as to make it likely that the Thebans and Thessalians (at any rate if united) could command a majority of votes in the Council; and since the battle of Leuctra the Thebans had begun to use the Council to further their political ends. Thus they caused it to impose a heavy fine upon Sparta for the seizure of the Cadmeia in 383, perhaps treating this act as a violation of the oath which bound the members of the League together; and in 356 the Council was led to mulct the Phocians in a very large sum for some offence, the nature of which is variously reported,¹ but which was probably the encroachment upon land dedicated to Apollo, the god of Delphi. They further proposed to dedicate the Phocians' own territory to the god. At the same

¹ Diod., XVI, xxiii.; Justin, VIII, i.; Paus., X, ii., 1; and Athen., XIII, p. 560 (quoting Duris). The principal authority for the history of the Sacred War is Diodorus' XVIth book.

THE THEATRE AND TEMPLE OF APOLLO AT DELPHI

PHOTO BY ALINARI

time they increased the penalty previously imposed upon the Spartans; for of course it had not been paid. Whether Sparta and Athens, which were both traditionally friendly to the Phocians, were represented at the meeting of the Council is unknown; if they were, they must have been outvoted.

The Phocians, led by Philomelus, refused to pay the fine; and after obtaining some financial aid from Archidamus, King of Sparta, proceeded in 355 to seize the temple of Delphi, and erase the record of the sentence against them. (The temple was in the hands of the Delphians, who were originally a branch of the Phocian race. There was a standing dispute between the Delphians and the Phocians as to the control of the temple, and Philomelus' action was not without some show of justification.) The Phocians also defeated the forces of the Locrians, their neighbours, who attacked them at the instigation of Thebes; and Philomelus secured (though not without threats of violence) the approval of the Pythia, the priestess of the oracle, for his designs. The Thebans and Thessalians (most of whom were traditionally hostile to their restless Phocian neighbours) now induced the Amphictyonic Council to declare a "Sacred War" against the Phocians, and summoned the Greek peoples to join in punishing them for their sacrilege. The response seems to have been fairly general on the part of the tribes situated to the north of Boeotia; Byzantium also,

which had for several years been friendly to Thebes, sent supplies of money.¹ The Spartans sent one thousand men to the assistance of the Phocians²; and to procure mercenaries, Philomelus made use of part of the treasures of the Delphian temple, probably intending at the time to repay them.

What was the attitude adopted by Athens? It is impossible to give a certain answer. Aristophon and Eubulus were alike disposed towards friendship with Thebes as a general policy,³ though on the other hand, there was a long history of friendship between Athens and the Phocians, and the People as a whole detested the Thebans. (Demosthenes himself was generally friendly to Thebes.)⁴ It is possible that at first the political leaders in Athens took the Theban side, and the record of a treaty between Athens and the Locrians,⁵ which seems to fall in the early years of the war, lends some colour to this view. In any case, though they appear to have returned a friendly answer to the Phocian appeal, they at first gave the Phocians no active help; and the popular mind seems to have been divided between a strong disapproval of the

⁴ Cf. *Æsch.*, *de F. L.*, § 106. καὶ γὰρ πρὸς τοῖς ἄλλοις κακοῖς βουλευόμενος. Demosthenes' Speech for the Megalopolitans was much more favourable to Thebes than to Sparta, though he used the conventional phrases of dislike for the Thebans to disarm suspicion.

⁵ *C. I. A.* ii., 90. See Schwartz, *Demosthenes' Erste Philippika* (Festschr. für Th. Mommsen), p. 17.

sacrilegious acts of the Phocians, and a sentimental anxiety lest they should be exterminated.¹

The war was waged with great ferocity from the first. Philomelus gained some striking successes, but in 354 was defeated by the Thebans near Neon and killed himself. He was succeeded by Onomarchus, who made an unscrupulous use of the temple-treasures, not only to pay mercenaries, but also to give presents to powerful persons in many cities, no doubt in order to obtain through them the support of their countrymen.² Among others who joined him was Lycophron, prince or "tyrant" of Pheræ, who was desirous of restoring the domination of his house over the Thessalians; for since the death of Alexander, a few years before, the house of Pheræ had lost its supremacy, and the Aleuadae of Larissa had come to the front. In 354 and the greater part of 353 Onomarchus appears to have been in the main successful. He defeated the Locrians, and also restored Orchomenus and liberated it from the power of Thebes. He also obtained command of the all-important pass of Thermopylæ; and though he sustained a check from the Thebans at Chæroneia, this does not seem to have greatly injured his cause. Before the end of 353, the princes of Larissa, Eudicus and Simus, invoked the aid of Philip against the rival house of Pheræ; Philip, as we have seen, obeyed the call; and Lycophron thereupon sent in haste for Onomarchus and his army.

¹Dem., *de Cor.*, § 18. ²Theopomp., fr. 240, 241 (Oxford Text).

Onomarchus first sent his brother Phayllus, who was soon driven off by Philip. He then went to the rescue himself, and defeated Philip severely in two battles. Philip was little daunted; encouraging his downcast troops, he withdrew from Thessaly for a time, but only, as he said, "like a ram, in order to butt the harder next time." For the moment Lycophron was master of Thessaly, and Onomarchus pursued his successes farther south, and captured Coroneia. But early in 352 Philip reappeared, and, crowning his men with laurel to proclaim their championship of the cause of Apollo and so to give them confidence, he obtained a complete victory over Onomarchus and Lycophron near the coast of Magnesia. Onomarchus lost his life, and Philip put to death a very large number of prisoners as guilty of sacrilege; some, however, of the fugitives were picked up by Chares, who happened to be sailing by the Magnesian coast at the time. Philip now besieged and took Pheræ, deposed Lycophron and put an end to the despotic régime, and became master of practically the whole of Thessaly.

Whatever had been the attitude of Athens earlier in the war, it was now evident that she could no longer ignore the growing power of Philip. It has been suggested that Chares may have been sent to Magnesia in order to co-operate with Onomarchus; though the only evidence is that of Diodorus, who treats his presence there as accidental. But when, after taking Pheræ, Philip pro-

ceeded to attack Pagasæ, the most important seaport of Thessaly,¹ the Athenians resolved to send an expedition to the aid of the town. Unfortunately, like the expedition to Methone, it arrived too late, when Philip had already become master of the port. Philip now arranged the affairs of Thessaly, acting on the whole in a lenient and conciliatory fashion, but taking for himself the harbour-dues and retaining Magnesia in his own occupation. Then, before July, 352, he moved towards Thermopylæ.

On this occasion the Athenians were in time. There can be no doubt that Eubulus, no less than the war-party, now realised the necessity of measures of defence. The only alternative would have been to make peace with Philip and come to a definite arrangement as to territory, both in Greece and in Thrace; but this would certainly have meant the renunciation of Amphipolis by Athens; and to this the majority of the Assembly would not yet have consented. Nothing remained then but to oppose Philip, and the measures taken were proposed by a supporter of Eubulus, Diophantus of Sphettus. The citizens were thoroughly roused and volunteered for service; and five thousand infantry and four hundred cavalry were sent by sea to Thermopylæ under Nausicles at a cost of two hundred talents (including the private expenditure of the soldiers). At Thermopylæ, Phayllus, the successor of Onomarchus in the command, already waited on land with a powerful army, in

¹ It lay close to the site of the modern Volo.

which the Phocians, whom he had rallied once more, were supported by large contingents of Spartans and Achæans, and by the mercenaries who had previously fought for Lycophron. On hearing of the arrival of the Athenian squadron, Philip abandoned the attempt to cross the Pass; and Demosthenes more than once¹ refers to this occasion as one of the few on which, in recent years, the Athenians had acted worthily of their traditions, and so had entirely succeeded in their object. Apart from the danger of an advance, Philip's willingness to retire is not hard to explain. He had already gained immensely in prestige in this campaign, not only by the mere fact of his victory, but by the rôle he had been able to assume, of champion of the god of Delphi, whose sanctuary had been violated by Onomarchus and the Phocians in a way which shocked the religious sentiments of the Greeks generally, whatever might be the political interests of each State. To create a favourable feeling towards himself in this way was no slight gain; and he may well have been content for the moment to enjoy the advantage of this, without endangering it by attempting to push his conquests further. It is also probable that with Thessaly in his power (though not yet perfectly subdued) to the north of the Pass, and with the Thebans, his allies, farther south, and presumably able to hold the defeated Phocians in check, he saw that less was to be gained by trying

¹ *E. g.*, Phil. I, § 13; *de F. L.*, §§ 84, 86; *de Cor.*, § 32.

to cross the Pass in face of strong opposition, than by pursuing and consolidating his conquests to the east of Macedonia.

So we find him before the end of 352 once more in Thrace. It has already been narrated that about a year before this, he had taken securities from Cersobleptes and had been opposed by Amadocus, but had refrained from retaliating. On the present occasion, he appears to have aided Amadocus against Cersobleptes. "The peoples of Byzantium and Perinthus," so a scholiast states,¹ "and Amadocus the Thracian, made war upon Cersobleptes, king of a portion of Thrace, on account of some disputed territory. Philip assisted them and defeated Cersobleptes, and forced him to yield the territory to those who claimed it. He further took Cersobleptes' son as a hostage, and carried him off to Macedonia." (Æschines saw Cersobleptes' son at Pella, where he was still kept in captivity, when he went there as ambassador six years afterwards.) Philip seems in fact to have been following the very policy which Demosthenes had recommended to Athens in the Speech against Aristocrates—that of dividing the power over Thrace among a number of persons or States; and his alliance with Byzantium appears natural enough when we remember that the Byzantines, like himself, had supported the Theban side in the Sacred War. He further made alliance with Cardia, and so secured for himself a stronghold

¹ On Æsch., *de F. L.*, § 81.

overlooking the Chersonese—a very serious menace to the power of Athens. In November of the same year he laid siege to Heræon Teichos. The exact position of this fortress is not known, but it was probably so near either to the Chersonese or to the coast along which the Athenian corn-ships passed that the Athenians could not contemplate Philip's action with equanimity; and they were once more roused to a fit of energy. Demosthenes' own words best describe the sequel¹:

Amidst all the discussion and the commotion which took place in the Assembly, you passed a resolution that forty warships should be launched, that men under forty-five years of age should embark in person, and that we should pay a war-tax of sixty talents. That was in the month of November. That year came to an end.² There followed July, August, September.³ In September, after the Mysteries, and with reluctance, you despatched Charidemus with ten ships, carrying no soldiers, and five talents of silver. For so soon as news had come that Philip was sick or dead—both reports were brought—you dismissed the armament, men of Athens, thinking that there was no longer any occasion for the expedition. But it was the very occasion; for had we then gone to the scene of action with the same enthusiasm which marked our resolution to do so, Philip would not have been preserved to trouble us to-day.

¹ Olynth. III, § 4.

² The Athenian year ran, roughly speaking, from July to July.

³ *I.e.*, of 351 B.C.

The account which Demosthenes gives can easily be filled out. We can imagine that the militant instincts of the democracy were so keenly aroused by the alarm raised by the war party, that Eubulus thought it necessary to yield so far as to send an expedition to Heræon Teichos. Then came the news of Philip's illness, which enabled Eubulus once more to advocate inaction, the wealthier citizens to seek to avoid the expenditure, and the rest to relapse into their customary unwillingness to do their own fighting.¹ (It is noteworthy that we now find Charidemus in the service of Athens. Probably Philip's activity in Thrace had convinced him that the cause of Cersobleptes was destined to be lost, and the Athenians were doubtless better pleased to have him as a supporter than as an opponent.)

We have seen that about this time the proposal of Demosthenes to help the exiled Rhodian democrats was made and defeated,—no doubt by the influence of Eubulus, who in this matter acted wisely, since it would have been very imprudent to risk offending Persia, when there were other enemies to be reckoned with. Artaxerxes was just now engaged in the attempt to reduce his rebellious subjects in Egypt to obedience, and was doubtless anxious to be free from troubles elsewhere. The refusal of Athens to take part in the

¹ In the Speech for the Rhodians (delivered, probably, early in 351), Demosthenes had upbraided the Athenians in passing for thinking of Philip as a foe not worth reckoning with.

Rhodian quarrel was therefore convenient to him; and at the same time he apparently tried to secure the inactivity of the Thebans by sending them a large present of money in answer to the appeal which they made to him, when they were hard pressed for funds with which to carry on the Sacred War. For the war was dragging on inconclusively. Phayllus had achieved some successes, but had died before the end of 352, and had been succeeded by Phalæcus; but the war continued to be waged in Boeotia and Phocis for some years, without any decisive action taking place; though at times the Phocian territory suffered severely from the incursions of the enemy.

When Philip recovered from the illness which forced him to raise the siege of Heræon Teichos, he appears to have turned his thoughts at once to Olynthus. He had suffered that city to remain at the head of the Chalcidic League, and to retain Poteidæa, Anthemus, and other territories; but it must have become more and more plain to all that he was not likely to refrain from requiring the submission of the league, and so consolidating his dominions, so soon as it should be convenient to him. Already in 352 Olynthus had taken advantage of Philip's absence in Thrace to make overtures to Athens, and had thus broken her compact with him, under which peace was only to be made by her with Athens in conjunction with himself; and shortly afterwards Philip's step-brother Arrhidæus, who had opposed Philip's

accession to the throne, took refuge in Olynthus and was welcomed there.¹ Early in 351—this at least is the probable date—Philip made his appearance within the territory of Olynthus.² It may be that he was only led to cross the borders of the Chalcidic League in the course of making good his conquest of the neighbouring territory of the Bisaltæ, on his way back from Heræon Teichos³; he certainly took no hostile steps against the cities of the League, and even protested his friendship towards them. But it was probably now that, in response to an embassy from the Chalcidic cities, he quoted to them a fable about War and Violence, which he represented as supernatural powers whom they seemed likely to bring down upon themselves.⁴

During the years 351 and 350 Philip left the Olynthians unmolested. It is possible that he suffered from a recurrence of his illness,⁵ and that during part of the time he was occupied in the fortification of strongholds in Illyria, and in hostilities against Arybbas, King of the Molossi.⁶ But there can be no doubt that he was all this time fostering in Olynthus a party favourable to himself, and secretly intriguing in Eubœa, with a view to creating such occupation there for the Athenian

forces as would render them unable to come to the aid of Olynthus, when he chose to fall upon it.

It is most probable that it was early in 351 that his ships began to make those raids upon Athenian territory which are mentioned both by Demosthenes and by Æschines. They not only descended upon Lemnos and Imbros, and carried off Athenian citizens as prisoners of war; but they also seized a fleet of Athenian corn-ships off Geræstus (the southernmost point of Euboea), and actually landed troops at Marathon, and carried off the Athenian state-galley, which was conveying a deputation to a religious festival at Delos.¹ The alarm which these acts occasioned is described by Æschines, who says that the special meetings of the Assembly which were called in the midst of the alarm and turmoil caused by the news outnumbered the regular meetings. Yet no active steps were taken, except that of sending Charidemus—probably to the Hellespont—as described in the passage already quoted from the Third Olynthiac, with ten ships and five talents, and leaving him to find mercenaries for himself; and it must have been at one of the meetings of the Assembly in this year (probably in the autumn, after the despatch of Charidemus)² that Demosthenes delivered his First Philippic Oration.

¹ Dem. Phil. I, § 34; in *Nær.*, § 3; *Proëm.*, xxi., § 2; Æsch., *de F. L.*, § 72.

² This is more likely than the view that the sending of Charidemus was due to the speech. The sending of Charidemus is probably referred to in § 43.

It was the first occasion on which Demosthenes had opened the debate, and it required some courage on the part of a man only thirty years of age to rise without waiting for older men (in accordance with the custom of the Assembly) to give their opinions first. "But," he said, "since we find ourselves once more considering a question upon which they have often spoken, I think I may reasonably be pardoned for rising first of all. For if their advice to you in the past had been what it ought to have been, you would have had no occasion for the present debate." He then proceeded at once to the attack. The unfortunate position of affairs was entirely due to the refusal of the Athenians to take a personal part in the defence of their country. It was the reliance upon mercenaries, the failure to support them and their generals with funds, and the intermittent character of their military operations, that placed the interests of Athens at the mercy of Philip. In a few strokes he depicted the Athenian people of his day—their excitability, their love of sensational gossip, their inability to sustain any impulse which they might feel for the moment, and to follow it out into effective action.

What? [he asked]—do you want to go round asking one another: "Is there any news?" Could there be any stranger news than that a man of Macedonia is defeating Athenians in war, and ordering the affairs of the Hellenes? "Is Philip dead?" "No, but he is sick." And what difference does it make to you?

For if anything should happen to him, you will soon raise up for yourselves a second Philip, if it is thus that you attend to your interests. Indeed, Philip himself has not risen to this excessive height through his own strength, so much as through our neglect. I go even further. If anything happened to Philip—if the operation of Fortune, who always cares for us better than we care for ourselves, were to effect this too for us—you could descend upon the general confusion and order everything as you wished; but in your present condition, even if circumstances offered you Amphipolis, you could not take it; for your forces and your minds alike are far away.

Besides this, the whole military system of Athens was at fault. The delay in organising a force even when it had been resolved upon was fatal in dealing with an adversary like Philip, and offered a strong contrast to the promptitude with which all arrangements in connection with the popular festivals were carried out. Nor could anything be done by isolated expeditions to the places attacked.

The method of your warfare is just that of barbarians in a boxing-match. Hit one of them, and he hugs the place; hit him on the other side, and there go his hands; but as for guarding or looking his opponent in the face, he neither can nor will do it. It is the same with you. If you hear that Philip is in the Chersonese, you resolve to make an expedition there; if he is at Thermopylæ, you send one there; and wherever else he may be, you run up and down in his steps. It is he that leads your forces.

It was therefore absolutely necessary, Demosthenes insisted, that there should be a standing force, kept permanently at the seat of war. Moreover, this force should consist in a large measure of citizens, whose presence would at least act as a check upon the independence of the generals, and make them less likely to desert the war to which Athens had sent them and go off upon some more profitable expedition. Further, Demosthenes reminded his hearers, these generals, receiving no support from home, plundered the very allies of Athens, and obtained acquittal when brought to trial, by pleading the difficulties of their position. This could only be remedied by providing both funds and citizen-soldiers liberally.

At the same time, Demosthenes was careful to distinguish his attitude from that of the noisy orators, who clamoured for war and proposed measures of a magnitude which was absurd under existing circumstances—with the result that nothing was done at all. He had thought out carefully what, in his opinion, the situation required, and had worked out the details after his manner. The force ultimately to be created was one of fifty ships, carrying citizen-troops, with transports for half the cavalry of the city; and this was to be kept ready for immediate action in case of any emergency. But since this armament could not be organised at once, he proposed that a smaller force should be prepared for immediate service, consisting of two thousand soldiers, of

whom five hundred were to be citizens, and two hundred cavalry, including fifty citizens. The citizens should serve in relays, and ten warships would be required. This force was not to fight any pitched battle, but to harry Philip's coasts, to keep him in check, and, above all, to prevent him from plundering the allies and territory of Athens. It was to receive bare rations—the amount was exactly calculated—and for the rest was to support itself. (Demosthenes accompanied the proposal with a detailed exposition of the sources from which he expected to be able to draw the necessary funds, but the schedule was unfortunately not published with the Speech, and has not come down to us.) The general in command, he said, would determine the particular operations to be undertaken, as circumstances required; the force would winter in the islands subject to Athens, and whenever the opportunity occurred, would lie close to the Macedonian coast, and block the mouths of the ports.

In order to rouse his countrymen to the pitch of enthusiasm which would induce them to take the steps which he urged upon them, Demosthenes appealed to every motive that could influence them—pride in the past, shame at the present, trust in the help given by Heaven to those who help themselves, alarm for the future if the danger were not averted by vigorous action. Beside the eloquence of this Speech the earlier orations—with the exception of parts of the Speech against Aristocrates—seem cold.

The proposals of Demosthenes have often been criticised. Of their practicability in detail we have no means of judging. But it is perfectly clear that if Philip was to be opposed at all—and it is really upon that fundamental question that his critics differ from Demosthenes—it could only be by neutralising the advantages which Philip possessed, through a change in Athenian methods of warfare, of the kind which Demosthenes proposed. Whether the Athenians would face the necessity of personal service and of a standing army was (just as he represented it) a question of character and resolution; and he believed in them enough to think them capable of the necessary sacrifices. That he was mistaken is perhaps small blame to him. The suggestion (which, of all that he makes in the Speech, sounds most strange to modern readers), that the presence of citizen-soldiers in the army was required in order to be a check upon the generals' independence, was probably sensible enough in the circumstances of the time. If, as it was, a general was to a great extent in the hands of his mercenaries, and had to lead them where they wanted to go, their influence would at least be partially counteracted by the presence of a large body of citizens, whose claim to the general's services on their country's behalf could make itself felt on the spot.

But so far as we know, Demosthenes' Speech bore no fruit. At least we know of no operations against Philip which can be assigned to the year

350. Instead of this we hear of trivial quarrels of the Athenians with their nearer neighbours, the Megareans and Corinthians. The Megareans appear to have trespassed upon land sacred to the two goddesses of Eleusis, Demeter and Persephone, whom the Athenians held in the deepest veneration; and an Athenian force, led by the general Ephialtes, invaded Megara, and forced the Megareans to recognise a delimitation of the sacred territory by the officials of the Eleusinian mysteries.¹ An armed force was also sent into the territory of Corinth to attend the Isthmian Games, because the Corinthians, for some reason unknown to us, had omitted to send the Athenians the customary official invitation to the Games. To these quarrels Demosthenes not unjustifiably refers² with contempt, since in pursuing them the People was neglecting its more vital interests.

It is probably to the same year that we must refer the friendly communications³ between Athens and Orontas, satrap of Mysia, who was in revolt against the King of Persia, and had helped the Athenian generals with supplies of corn. These communications showed a different attitude on the part of the Athenians towards Persia from that which had led them in 356 to recall Chares when he was helping Artabazus. Moreover, the rebellious subjects of the King in Egypt were being assisted by the Athenian Diophantus, and owed much of

¹ See Didym., *Schol. in Dem.*, Col. 13, for details.

² Olynth. III, § 20.

³ *C. I. A.*, ii., 108.

their success to his generalship. (On the other hand, Phocion, of whom much more will be said in the sequel, is found in 350 helping the King's forces at the siege of Salamis, where Euagoras had revolted. Perhaps by this time Orontas had been subdued, and the King may have threatened the supporters of the rebel satrap, and caused them to veer round once more.) There is much that is obscure in the relations of Athens to the King at this time, but the hostile attitude which she appears to have adopted for a time may possibly be explained by recent communications between Philip and Artaxerxes. It is at least probable that Philip had thought it well, before turning his attention to conquests nearer home, to come to a temporary understanding with Artaxerxes which would secure him against Persian interference with his own recently acquired power in Thrace and on the Hellespont.¹

In the meantime Philip was encouraging the party favourable to himself in Olynthus, the leaders of which were Euthykrates and Lasthenes, assuring them that he meant their city no harm, and inducing them to persuade their fellow-citizens to dismiss his opponents from their confidence.

¹ Demosthenes (Phil. I, § 48) alludes to a rumour that Philip had sent ambassadors to the King; and Arrian, II, xiv., quotes a letter of Darius to Alexander the Great, reminding the latter of his father's friendship and alliance with Artaxerxes Ochus. There is no indication in Arrian of the date of the alliance, and some would place it about 343; but I think the year 351-0 is more likely to be the right date.

Thus persuaded, the Olynthians exiled Apollonides, the leader of the anti-Macedonian party, and before long took what proved to be the fatal step of appointing Lasthenes to command their cavalry.

And so [says Demosthenes¹], when some of them began to take bribes, and the People as a whole were foolish enough, or rather, unfortunate enough, to repose greater confidence in these men than in those who spoke for their own good; when Lasthenes roofed his house with the timber which came from Macedonia, and Euthykrates was keeping a large herd of cattle for which he had paid no one anything, when a third returned with sheep, and a fourth with horses; while the People, to whose detriment all this was being done, so far from showing any anger or any disposition to chastise men who acted thus, actually gazed on them with envy, and paid them honour, and regarded them as heroes—when, I say, such practices were thus gaining ground, and corruption had been victorious, then, though they possessed one thousand cavalry, and numbered more than ten thousand men, though all the surrounding peoples were their allies, though you went to their assistance with ten thousand mercenaries and fifty ships, and with four thousand citizen-soldiers as well, none of these things could save them. Before a year of the war had expired they had lost all the cities in Chalcidice, while Philip could no longer keep pace with the invitations of the traitors, and did not know which place to occupy first.

The history of the years 349 and 348 affords a

¹*De F. L.*, § 265; *cf.* *Phil.*, III, §§ 56, 63, 64, 66, and *de Chers.*, § 59.

striking proof of the demoralisation of the political leaders in these cities, and of the ruthlessness with which Philip removed out of the way, by foul means no less than by fair, any obstacle that barred his progress. He virtually declared war on Olynthus, despite his renewed professions of good-will, early in 349, when he demanded the surrender of his step-brother. This demand the Olynthians refused. Probably they recognised that they would now in any case have to fight to the death; and they renewed their appeal to Athens, asking once more for the alliance which had been talked of three years earlier, and for practical assistance against Philip.¹ In the meantime they declined to make any agreement with him, though he appears to have made proposals to them.

The First Olynthiac Oration of Demosthenes formed part of the debate upon the Olynthian request. It has indeed been disputed whether it was actually the first of the three Olynthiacs to be delivered, but expressions used in it leave no doubt that the alliance, or at least the nature of the help to be given to the Olynthians, had not yet been determined upon, and that at the time of its delivery Olynthus itself had not been attacked, and none of the Chalcidic cities had been actually taken; nor can Philip's expedition to Thessaly (which occurred later in 349) have taken place. The traditional order of the Speeches is in fact the most probable, and the character of the

¹ Philochorus ap. Dion. Hal. ad Ammæum, I., ix.

several Speeches, in this order, admits of easy explanation.

Demosthenes began by congratulating his hearers on the happy fortune which had offered so desirable an alliance to Athens, and by laying stress upon the certainty (as he regarded it) that Philip, unless checked at a distance, would make his way to Attica itself; and that if he did this, the country, and above all the farmers, would be ruined. He entreated his countrymen to fling aside their short-sighted indifference, and to exchange their love of ease for a strenuous activity on behalf of the Olynthians and of their own interests. He reminded them of Philip's restless energy, and his skill in using his opportunities, and contrasted it with the dilatoriness of the Athenians, who were always too late to effect their object. He further urged that the present moment was a peculiarly opportune one; for not only had Philip been disappointed at not carrying all before him without having to strike a blow, but the Thessalians were growing restive and were likely to revolt against his supremacy.

The Speech was not confined to generalities. Demosthenes had, as usual, a definite plan of action in view, and did not shrink from the responsibility and the risk of proposing it. One force must go to Chalcidice to save the towns of the League; another to the Macedonian coast, to inflict damage upon Philip's own country. As regards funds, he hinted, not obscurely, that the

only right course was to divert the festival-money to military uses; but as it was obvious that the People were not prepared for this, he suggested a general war-tax as the best means of raising money.

The proposals of Demosthenes were strongly opposed, and among others, Demades¹ (a brilliant extempore orator who afterwards played a considerable part in the history of Athens) spoke against them. But the alliance with Olynthus was made; Chares was sent with two thousand mercenaries and the thirty ships which were already under his command; and in addition, eight ships were to be sent when they could be got ready.² The mission of Chares, however, proved fruitless—for what reasons we do not know. His enemies in Athens (the party adverse to war) renewed their campaign of accusations against him,³ and apparently he was inadequately supplied with funds; for it seems most likely that at the time when the Second Olynthiac was delivered, no war-tax had yet been levied; and it is not improbable that the People, in deciding upon an expedition, had abstained from voting money to maintain it. Besides this, the same orators appear to have represented Philip in the most formidable light, as a power with whom it was useless to contend.

Under some such circumstances the Second

¹ Suid., *s. v.* Δημάδης.

² Philochorus ap. Dion. Hal., *l. c.*

³ The accusations may very likely have been true enough. See Dem., Olynth. II, §§ 27-29.

Olynthiac was delivered, not long after the First. Demosthenes insists briefly upon the shamefulness of his countrymen's inaction, and then devotes a large section of the Speech to the argument that Philip's power, being based upon selfishness and treachery, could not last, and that there were already signs of its approaching collapse. The argument does more credit perhaps to the orator's faith in moral principles than to his insight into the situation of the moment. Possibly it was adopted merely as a convenient method of persuading the multitude that Philip was not so formidable as he was said to be. Yet there is a ring of sincerity about it, which perhaps justifies us in thinking that Demosthenes' experience had not yet been long enough to show him that the triumph of righteousness in mundane affairs is often long postponed, and cannot be reckoned upon at any given moment.

When power [he says] is cemented by good-will, and the interest of all who join in a war is the same, then men are willing to share the labour, to endure the misfortunes, and to stand fast. But when a man has become strong, as Philip has done, by a grasping and wicked policy, the first excuse, the least stumble, throws him from his seat and dissolves the alliance. It is impossible, men of Athens, utterly impossible, to acquire power that will last, by unrighteousness, by perjury, and by falsehood. Such power holds out for a moment or for a brief hour; it blossoms brightly, perhaps, with fair hopes; but time detects the fraud,

and the flower falls withered about its stem. In a house or a ship or any other structure it is the foundations that must be strongest; and no less, I believe, must the principles which are the foundation of men's actions be those of truth and righteousness. Such qualities are not to be seen in the acts of Philip to-day.

In the later speeches against Philip we find little remaining of this fine faith.

But the orator's application of these principles was not a happy one. For the picture which follows of the disaffection of Philip's followers, and of the incompetence of the warriors who surrounded him (if not of their dissoluteness), must be greatly overdrawn, even though it purports to be based on first-hand evidence. There can also be little doubt that the representation which he gave of Philip's condition was ill-judged, for it is never wise to set too low a value on an enemy, and Demosthenes may even have contributed to the failure of his own object, by encouraging the People (contrary to his custom) to think too lightly of their danger. They were not at all unlikely to seize on this part of his Speech and neglect the rest.

Demosthenes next turns upon the Athenians themselves the blame for the misconduct of their generals, whom they would not supply with the means to carry on the war, and who therefore resorted to actions which roused the virtuous indignation of the citizens who sat at home at

ease. He demands once more (as the only solution of the difficulty) that the citizens shall go on active service in person, and shall contribute funds in proportion to their wealth; and further that they shall reform their behaviour in the Assembly and listen impartially to the various counsels given to them, in order that they may choose the best. "You used, men of Athens, to pay taxes by Boards; to-day you conduct your politics by Boards. On either side there is an orator as leader, and a general under him,"—the reference is probably to Chares and Charidemus, who were respectively patronised by rival groups,—“and for the Three Hundred,¹ there are those who come to shout. This system you must give up; you must even now become your own masters; you must give to all their share in discussion, in speech and action.” The Second Olynthiac goes beyond the First in the hint which it contains of a reform of the taxation-system, by which all, without exception, should be obliged to contribute in proportion to their income; in the proposal (repeated from the First Philippic) that the citizens should serve in the army in relays, until all had served; and in the suggestion that an embassy should be sent to make common cause with the discontented Thessalians. But none of these suggestions was carried out; there was little or no improvement in the attitude either of the dominant party or of the People towards the war; and about

¹ See above, p. 51.

this time Chares was recalled to take his trial upon the charges preferred by his enemies, and was not, it would seem, immediately replaced.

Philip now began a series of attacks upon the towns of the Chalcidic League. Among the first to suffer was Stageira, the birthplace of Aristotle, which was razed to the ground.¹ (Its restoration was permitted many years later upon the intercession of the philosopher.) His operations, however, seem to have been interrupted by the necessity of reducing the Thessalians to order. They had grown restive, as we have already seen. Peitholaus, one of the dynasty expelled from Pheræ had returned²; the fortification of Magnesia by Philip's generals had been interfered with; and the Pheræans had resolved to demand from Philip the restoration of Pagasæ, and to refuse him the enjoyment for the future of their harbour and market dues. In consequence of this, Philip once more expelled Peitholaus, and took steps to quell any tendency to insubordination, whether by force or by those friendly assurances which he knew so well how to give and to break.

In the course of the summer, probably as soon as Philip's operations in Chalcidice began, the Olynthians again appealed to Athens for help. In response to the appeal Charidemus was transferred from the Hellespont to Chalcidice, with eighteen ships and a mercenary force consisting of four thousand light infantry and 150 cavalry.

¹ Diod., XVI, lii.

² *Ibid.*

At first his conduct of the war appeared to promise success. He overran Pallene (one of the three promontories of the Chalcidic peninsula, already invaded by Philip), and devastated Bottiæa, a district of Macedonia south of the river Lydias. But the promise came to nothing, through Charidemus' own fault; for instead of prosecuting the campaign further he gave himself up to the grossest debauchery, and even demanded from the Olynthian Council the means to satisfy his lusts.¹

Nevertheless the temporary success of Charidemus may have caused some elation in Athens, and in the debate in which Demosthenes' Third Olynthiac oration was delivered most of the speakers appear to have talked light-heartedly of wreaking vengeance upon Philip. It is probable that the special subject of the debate was the financial provision to be made for the operations in aid of Olynthus; the date which seems most likely is the autumn of 349. Though the orator repeats briefly some of the points of the earlier Speeches (emphasising the discredit attaching to Athens, and the danger of allowing the war to be carried into Attica), his main object is now to urge the necessity of setting free the money which at present passed into the festival-fund, and of using it for the purposes of the war. The probable nature of the difficulty has already been explained.² Demosthenes' words leave no doubt that Eubulus and

¹ Philochorus *ap.* Dion. Hal., *l. c.*; Theopomp., fr. 139 (Oxford Text).

² See above, p. 127.

his party had succeeded, by means of a comparatively recent law, in giving fresh security to the distributions of festival-money. No motion to use that money for the war would be legal, until the law in question had been repealed; and the repeal of the law could only be effected by the *Nomothetæ*, the Legislative Commission appointed out of the jurors for the year, to which the making and unmaking of laws was entrusted.

The danger of attempting to secure the desired end by any more direct means was illustrated by the fate of Apollodorus, who about this time proposed a resolution in the Council (and subsequently brought it before the Assembly) that the Assembly should decide whether the surplus funds at the disposal of the administration should go to the festival-fund or to the military chest. According to the account given in the Speech against *Neæra*¹ (the work of an unknown contemporary of Demosthenes), no one in the Assembly voted against the proposal; and though this is probably an exaggeration, the Assembly doubtless approved warmly of the proposal. But Apollodorus was indicted by Stephanus for the illegality of his decree, and was fined a talent. We do not know what the precise relations between Demosthenes and Apollodorus at this time were.² It is clear, however, that their policy in regard to the festival-money was identical,³ but that Demos-

¹ § 5.

² See Appendix to this chapter.

³ On this policy in general, see above, pp. 96-98.

thenes was more careful than Apollodorus to go to work in a legal manner.

In the Third Olynthiac he demands the appointment of a Legislative Commission, and further requests that the first step shall be taken by those who were responsible for the mischievous law. He also demands the repeal of certain laws with regard to military service, which gave encouragement to malingerers, and took the heart out of patriotic citizens. He goes on to insist with greater emphasis than ever upon the need of personal service, and of such a reorganisation of the financial system as would require every citizen to render his duty to the State, according to his age and capacity, before becoming entitled to any share in the public funds. We do not know if this proposal was embodied in any formal motion; if it was, it was not carried; and certainly no Legislative Commission was appointed. But the words in which Demosthenes outlines the kind of reorganisation which he has in view are sufficiently remarkable.

“What?” some one will ask, “do you suggest that we should *work* for our money?” I do, men of Athens; and I propose a system, for immediate enforcement, which will embrace all alike; so that each, while receiving his share of the public funds, may supply whatever service the State requires of him. If we can remain at peace, then a man will do better to stay at home, free from the necessity of doing anything discreditable through poverty. But if a situation like

the present occurs, then, supported by these same sums, he will serve loyally in person, in defence of his country. If he is beyond the age for military service, then let him take, in his place among the rest, that which he now receives irregularly and without doing any service, and let him act as an overseer and manager of business that must be done. In short, without adding or subtracting more than a small sum, and only removing the want of system, my plan reduces the State to order, making your receipt of payment, your service in the army or the courts, and your performance of any duty which the age of each of you allows, and the occasion requires, all part of one and the same system. But it has been no part of my proposal that we should assign the due of those who act to those who do nothing; that we should be idle ourselves and enjoy our leisure helplessly, listening to tales of victories won by somebody's mercenaries¹; for that is what happens now. Not that I blame one who is doing some part of your duty for you; but I require you to do for yourselves the things for which you honour others, and not to abandon the position which your fathers won through many a glorious peril, and bequeathed to you.

It may be that such a proposal had no chance of success; and modern critics have spoken contemptuously of Demosthenes' unpractical and fanciful schemes of reform. Yet we cannot but feel that the history of Athens would have been the poorer, if no one had set forth a policy worthy of the great traditions of the city. It is true that

¹ An obvious reference to Charidemus.

idealism is easier for the Opposition than for those who are responsible for the detailed working out of practical measures. Yet it is plain that it required no small courage in Demosthenes to speak in this tone. Those who associate him with vulgar demagogues need to remember that on this occasion Demosthenes was opposing not merely the dominant party, but the whole force of popular desire; for, so far as the festival-money was concerned, Eubulus and the People were entirely at one. Consequently, he tried to make the People realise the wrong done to them by the politicians who spoke to please them, and effected their own ends by flattering the desires of the multitude; and he repeats with little alteration some of the passages which he had already used in composing the Speech against Aristocrates. The contrast between the spirit of the great statesmen of Athens in old days and that of his own opponents is drawn in a passage¹ which is too long for quotation, but is one of the most impressive in all his speeches.

In 348 Philip made his appearance again in Chalcidice with a large army, and continued the work of conquest. One after another the towns fell into his hands; corruption and treachery did his work even more effectively than force.² Mecyberna, the port of Olynthus itself, distant less than three miles from the city, and Torone, the chief

¹ §§ 24-31.

² Diod., XVI, liii.

town of the Sithonian peninsula, were betrayed, and he took them without having to strike a blow. At last he threw off all pretence. Hitherto he had continued to profess friendly intentions towards Olynthus; but when he was within five miles of the city, he suddenly told the Olynthians that there were only two alternatives—either they must cease to live in Olynthus, or he to live in Macedonia.¹ Once more the Olynthians appealed to Athens, begging for a force, not of mercenaries, but of citizens. The Athenians were at last roused; but they were in great difficulties; for, owing to the intrigues of Philip in Eubœa, they found themselves involved in hostilities with their former allies in that island. It was, however, determined that Chares should go to the relief of Olynthus with a citizen force of two thousand heavy infantry and three hundred cavalry.² But Chares had not yet passed the public examination of his conduct in his former expedition to Olynthus, in reference to which a trial upon charges brought by Cephisodotus hung over his head; and he demanded that the matter should be settled before he went. Cephisodotus complained that Chares was making the demand with his hand on the throat of the People; but it may be taken as certain that no accusation was allowed to stand in the way of his departure, and he sailed.³ Unhappily he was hindered by the stormy wind which blows for some

¹ Dem., Phil. III, § 11.

² Philochorus *ap.* Dion. Hal., l. c.

³ Ar., *Rhet.*, III, x., 1411a.

weeks in the summer from the north over the Ægean; and before he could arrive at Olynthus, the city had fallen by treachery.¹ It had held out bravely against repeated assaults by Philip's army, and had inflicted heavy losses upon it. But in the end Lasthenes, who had been given the command of the Olynthian cavalry, betrayed them on the field, in conjunction with Euthykrates; and with their betrayal all was lost.²

About the month of August, 348, Philip entered Olynthus. By his orders the inhabitants (among whom a number of Athenian citizens were captured) were sold as slaves³; and with cruel cynicism the traitor Euthykrates was appointed to determine the price to be paid for each.⁴ Philip's step-brothers Arrhidæus and Menelaus were taken and put to death.⁵ The conqueror made large presents of captives and spoil to his friends and supporters; and not long afterwards Æschines described how he had met the Arcadian Atrestidas travelling home from Macedonia with a large body of women and children given to him by Philip.⁶ The Olynthian territory was given principally to Macedonian chieftains, and large parts of Chalcidice were

probably worked by their former inhabitants as slaves, for the benefit of Philip and his retainers.¹ Among the friends of Philip who profited by his distribution of the lands taken from the allies of Athens were (according to Demosthenes)² both Æschines and Philocrates, of whom much more will be heard shortly. By the time that Philip's work was finished, thirty-two Chalcidic towns had been annihilated, and that (Demosthenes tells us³) with such savagery that a few years afterwards no one could have told that their sites had ever been inhabited. Most of them were never restored; and Appian,⁴ writing in the second century after Christ, says that no trace remained of them except the foundations of the temples. Even if, as some modern writers⁵ assert, Demosthenes somewhat exaggerated the calamity for rhetorical effect, there can still be no real doubt of the sweeping nature of the destruction inflicted by the conqueror upon this unhappy region.⁶ Those who could derived some satisfaction from the fact that when the traitors had done their work, they were cast aside by Philip, who knew them too well to trust them.⁷

The Athenians gave a home and the privileges of citizenship to those fugitives from Olynthus who

¹ Æsch., *de F. L.*, § 156, and Dittenb., *Syll. Inscr.* (ed. 2), No. 178. ² Dem., *de F. L.*, §§ 145, 146. ³ Phil. III, § 26.

⁶ Pliny (*Nat. Hist.*, ii., 27) spoke of the blood-red meteor, which fell to earth in 349, as a message of the sanguinary cruelties which accompanied the fall of Olynthus. ⁷ Dem., *de Chers.*, § 40.

had made good their escape, and tried to quiet their own consciences by passing resolutions of strong condemnation against the traitors.¹ But the prospect of the final loss of all hope of recovering Amphipolis (for this was a necessary consequence of Philip's victory) cannot have been easy to face. Philip, on the other hand, celebrated his victory by holding a festival in honour of the Olympian Zeus, with dramatic performances to which he summoned all the most celebrated actors of Greece, feasting his friends and making presents to them with lavish generosity.²

We must now recur to the unexpected crisis in Eubœa, which was at least a partial cause of the failure of the Athenians to render effective aid to Olynthus.³ We saw that the influence of Athens in Eubœa had been restored by the brilliant campaign of Timotheus about the year 357, when the Athenians liberated the people of Eubœa at their own request from the domination of Thebes; and in 352 Demosthenes⁴ mentioned Menestratus of Eretria as a ruler friendly to Athens. But very soon after this Philip had begun to feel his way in the island. In the First Philippic Demosthenes quoted a letter which Philip had sent to the Eubœans, though its purport has not

¹ Dem., *de F. L.*, § 267; Suid., s. v. *κάρανος*; Harpocr., s. v. *ισοτελής* etc.

² Demosthenes (*de F. L.*, § 192 ff.) tells a touching story of the favour asked, in response to Philip's invitation, by the comic actor Satyrus. ³ Above, p. 183. ⁴ In *Aristocr.*, § 124.

come down to us. It appears probable, however, that he went to work by encouraging the establishment of tyrants in the important cities of the island, and by supporting them with money and men. In Eretria, in 348, the ruler, who was favourable to Athens, was Plutarchus; and a rising against him was led by Cleitarchus,¹ who was probably now (as he was later) in close touch with Philip. Plutarchus accordingly sent to Athens to ask for aid. Demosthenes strongly opposed the granting of this request, desiring doubtless that the undivided forces of the city should be employed to save Olynthus from Philip. His action in so doing has been much criticised, on the ground that Eubœa was far nearer to Athens than Olynthus, and that a hostile power there could be a very dangerous foe. But it is quite possible that he was right. The only chance of defeating Philip was to strain every nerve, and to let no other call stand in the way. Experience had shown that a short and sharp campaign² might suffice to reduce Eubœa; and this might, without inordinate risk, be postponed until the Olynthian crisis was over.

However this may be, Plutarchus had a powerful helper in Athens in the wealthy Meidias, the friend of Eubulus and the enemy of Demosthenes, whom he actually accused of fomenting trouble in Eubœa in order to injure Plutarchus, the friend of Athens.³ Owing to the influence of Eubulus and

¹ Schol. on Dem., *de Pace.*, p. 161.

² Like that of Timotheus; see p. 68. ³ Dem., *in Meid.*, §110.

Meidias, it was resolved to send assistance to Plutarchus; Phocion, a brave soldier and a member of Eubulus' party, but trusted by all alike for his blunt and outspoken honesty, crossed with a force of infantry and cavalry about the month of February, 348,¹ and Meidias went with him as a cavalry officer.

The detailed history of the expedition is not very certain. But it appears that some of the cavalry were transferred to Olynthus,² and that Phocion unwisely sent home the rest of them, thinking that they were not wanted.³ With the remainder of the force Phocion took up a disadvantageous position near Tamynæ, while Plutarchus encamped in the neighbourhood. Here Phocion was beleaguered by Callias and Taurosthenes, two brothers who held sway over Chalcis, and of whom the former had obtained aid from Philip (probably in the form of troops serving under Philip's generals in Thessaly), and the latter had hired mercenaries who had previously been engaged in Phocis.⁴ Phocion was hardly pressed, and though he affected to think little of the desertions of the more frivolous of his soldiers, he sent to Athens for reinforcements. The Council at once ordered back the

¹ Dem., in *Bæot. de nom.*, § 16. Demosthenes described Phocion as "the pruner of his periods" (ἡ τῶν ἐμῶν λόγων κοπίς).

² Dem., in *Meid.*, § 197.

³ Meidias on his return home denounced the way in which the expedition had been conducted; *ibid.*, § 132.

⁴ Æsch., in *Ctes.*, §§ 86, 87; Plut., *Phocion*, xii., xiii.; Dem., in *Meid.*, § 161 sqq. See also Note 1 at the end of the Chapter.

cavalry who had been sent home, and called for rich men to volunteer to be trierarchs, so heavy was the expenditure demanded at this time. Among the volunteers was Meidias himself.¹ Before the reinforcements could leave Athens, an engagement had been forced upon Phocion at Tamynæ by the action of Plutarchus, who marched out of camp to meet an attack of the enemy without waiting for Phocion. The Athenian cavalry, also too impatient to wait for Phocion, followed Plutarchus in some disorder. After very little fighting Plutarchus fled; and it was only by hard fighting that Phocion, having appeared on the field of battle, was able to win the day. Among those who were specially distinguished in the fight was Æschines, who was sent to take home the news of the victory.² The conduct of Plutarchus was set down to treachery, and Phocion proceeded to expel him from Eretria, and to occupy the commanding fortress of Zaretra, while Callias took refuge with Philip.

On hearing of Phocion's victory, the Athenians had countermanded the reinforcements which they had voted; and Phocion was obliged to send a second message to ask that they should be despatched. Before they could leave Athens, the Dionysiac festival took place (in March, 348)³,

¹ Demosthenes ungenerously suggests that he volunteered to be trierarch only to avoid fighting with the cavalry, of which he was an officer. ² Plut., *Phoc.*, xiii.; Æsch., *de F. L.*, § 169.

³ Note 2. The Speech of Demosthenes against Meidias is the chief authority for this affair and the events connected with it.

and Demosthenes acted as choregus on behalf of the Pandionid tribe, having volunteered to undertake the expenditure and returned from the army in Eubœa, where he had been serving, in order to fulfil the duties of his office. In the midst of the festival, to which a certain religious sanctity was attached, Meidias entered the theatre in a violent manner, and struck him a number of blows on the head with his fist. This outrageous act was only the last of a series of attempts to interfere with Demosthenes in the discharge of his duties. For Meidias had already tried to prevent the members of the chorus which Demosthenes furnished from obtaining the usual exemption from military service; he had broken into the house of the goldsmith whom Demosthenes employed, and had damaged the gold crowns and gold-embroidered robes which were being made for the chorus; he had corrupted the chorus-trainer and even the archon who presided at the Dionysia; he had tried to induce the judges at the festival to promise to vote against Demosthenes' chorus; and he had blocked up the entrances by which the chorus was to march into the theatre. It is not surprising that though Demosthenes had secured the services of the best flute-player in Athens, Telephanes by name, and Telephanes had done his best to replace the chorus-trainer, the prize went to another.

On the day following the Dionysia, the Assembly met in the theatre, to consider (as was customary)

any matters that arose out of the festival. Demosthenes laid a formal complaint against Meidias, and the Assembly passed a vote condemning the latter's act, and so strengthened Demosthenes' hands with a view to his intended prosecution of Meidias before a law-court. We shall see later on what the issue of this affair was. The prosecution of Demosthenes by Euctemon, the friend of Meidias, for desertion in returning from Eubœa was not persisted in. It was indeed too absurd to have a chance of success.

After the Dionysia the troops which Phocion had asked for were sent, and the cavalry encamped (as before) at Argura. (Meidias however stayed with his ship.) In the course of the summer Phocion was succeeded in the command by Molossus. The recall of Phocion is possibly explained by the fact which Plutarch mentions immediately before it, that Phocion, after occupying Zaretra, had set free all the prisoners who were of Hellenic nationality, fearing the orators at Athens, lest they should force the People in anger to take some cruel action against the prisoners—an action at once creditable to Phocion's good feeling, and significant of his well-known contempt for the People and their leaders. However this may be, his successor mismanaged the war, and was himself taken prisoner. Before the summer was over, peace was made upon terms disadvantageous to Athens. The Eubœan towns obtained their independence, and the Athenians cherished some

ill-feeling against them for several years. Carystus alone remained a member of the Athenian alliance. A particular cause of annoyance lay in the fact that Plutarchus, when pressed for payment by some of his mercenaries, had given them some Athenian soldiers as security,¹ and these the Athenians had actually been obliged to ransom at heavy cost.

The Euboean war may temporarily have cast a shadow over the popularity of Eubulus. His cousin Hegesileos, who had been second in command to Phocion and was accused of abetting the proceedings of Plutarchus, was tried and condemned, and Eubulus did not venture to appear in his defence.²

The events of the year 348 were thus disastrous for Athens. Not only was Philip's power now consolidated down to the southern borders of Thessaly, but Athens herself was practically isolated. The Euboeans, her most powerful allies, were lost to her; her settlers in Lemnos, Imbros, and other islands were exposed to the attacks of Philip's captains; and if Philip made his way to the Hellespont, it was doubtful whether she could oppose him with any chance of success.³

To assign the responsibility for the course which events had been allowed to take is no easy task. There can be little doubt that Demosthenes was right in seeing signs of grave moral decay in the

¹ Schol. on Dem., *de Pace*.

² Dem., *de F. L.*, § 290.

³ Note 3.

Athenian People as a whole. Their love of pleasure and their indifference (except in sentiment) to the national honour, so long as the festival-money was not interfered with, did not exist only in his imagination; and when all allowance is made for the excuse—it was hardly more—afforded by the religious character of the festivals, we cannot but feel that the People had primarily themselves to thank for their disasters. It was the same moral causes, reinforced by the unwillingness of many to leave their business, that accounted in a great measure for the refusal of personal service in the army. The professional soldier might be a more efficient fighter, but professional soldiers were ruinously expensive; and the better morale of the citizen-soldier fighting for his own country probably went some way towards compensating for his technical deficiencies; the hard-won success of Phocion's citizen-hoplites at Tamynæ showed that such a force was not to be despised. Now and then, in a moment of excitement, the citizens would rise and take the field; but their enthusiasm was short-lived, and they would not face a fully-considered system of regular service in relays, such as Demosthenes advocated.

It is not worth while to attempt to apportion the blame more precisely between the People and their leaders. Eubulus' policy came to shipwreck over foreign and military affairs, largely because funds were not forthcoming for active warfare, however well he had provided for defensive

measures; and funds were not forthcoming because he either would not or dared not curtail the festival-fund, nor would he draw, as he might have done by means of a war-tax, upon the wealth of the richer classes who were his principal supporters. A few volunteer trierarchs were a poor substitute for the contributions which the considerable private wealth of the citizens of Athens might have provided. But the measures of a political leader necessarily depend to a great extent upon what he can expect his followers to consent to; and the defects of the policy of Eubulus largely arose out of those of both the richer and the poorer classes; for the one would not make great sacrifices, and the other would not give up the distributions; and it was doubtless his misfortune that he was given no time to carry out his policy of retrenchment and the gradual building up of a navy, but was confronted by a combination of circumstances which proved too strong for him and for Athens. The conjunction of the Eubœan difficulty with the Olynthian crisis was cunningly contrived by Philip, and rendered the efforts of the Athenians ineffectual just at the moment when they were preparing to throw some real energy into the assistance which they gave to the beleaguered town. The strain upon them was great¹; and though it might probably have been met by means which they did

¹ In the early part of 348 there was not enough money to pay the juries, so that the courts had to be suspended (Dem., *in Bæot. de nom.*, § 16).

not see fit to adopt, neither politicians nor people proved equal to dealing with the situation. It is to the credit of Demosthenes that throughout these years he represented fearlessly the higher side of the national spirit as he understood it, and attempted to revive in his countrymen what, in spite of themselves, he believed to be their true character.

Before closing this account of the first period of the war with Philip, it will be convenient to narrate the sequel to an incident which has already been described, the assault of Meidias upon Demosthenes at the Dionysia of 348. Demosthenes, as we have seen, encouraged by the vote which the Assembly passed in condemnation of Meidias' misconduct, gave notice that he would prosecute him before a jury. Even after this, Meidias proceeded to commit further acts of annoyance against Demosthenes, and opposed (though unsuccessfully) his selection as a Councillor for the year 347-6, by bringing false accusations against him at the scrutiny to which, like all other candidates for office, Demosthenes had to submit. At the meeting of the Assembly at which Meidias' conduct at the Dionysia had been considered, Eubulus, in spite of Meidias' entreaties, had refused to rise and speak in his defence. But it became known later that he intended to support Meidias at the trial; and it also became apparent that no public speaker would give his aid to

Demosthenes. That the influence of Eubulus with an Athenian jury was very great is proved by the pains which Demosthenes took to counteract it both in the Speech against Meidias and in his prosecution of Æschines.¹ Meidias himself was also a person of no small influence, and held a number of offices which carried with them some importance and dignity, however reprehensible he might have been in his performance of the duties attached to them. Demosthenes therefore may have felt that his chances of winning his case, in the existing condition of public feeling, were small, for the popular indignation at the insult to a choregus had doubtless soon worn off; and Meidias' friends appear to have intimated that Meidias was ready to pay adequate compensation, if the prosecution were dropped. Accordingly, before the case was actually brought into court, Demosthenes, after repeatedly rejecting all overtures, at last came to terms with Meidias (probably late in the year 347), and accepted half a talent from him in settlement of his grievance.² It is possible that he was partly influenced by political considerations; for we shall see shortly that in the year 347-6 Demosthenes acted in harmony with Eubulus and his party in forwarding the negotiations for the Peace with Philip, which had now become necessary; and he may have been glad, by abandoning

¹ Dem., *de F. L.*, §§ 290 ff.

² Half a talent was by no means a contemptible sum, though Æschines and others scoff at Demosthenes for accepting it.

his suit against Meidias, to avoid creating difficulties, and also, it might be, imperilling his own position in Athens.

The speech which Demosthenes composed for the prosecution of Meidias survives, though there are indications that it did not receive a final revision, and it was probably not published by Demosthenes himself. It is a vigorous attack upon the whole life and career of Meidias (including unhappily some of those fictions about the parentage of the accused which seem to have appealed to Athenian juries). The orator repeatedly insists that the insult was less to himself than to the People (who had already expressed their indignation), and recalls, one after another, the acts of violence and outrage of which he alleges Meidias to have been guilty. He deals with parallel cases in the past—both those from which Meidias might hope to draw some arguments in his defence, and those which formed precedents for his condemnation. He disparages the vaunted public services of Meidias, and compares them with his own. After employing every argument which can blacken the guilt of Meidias himself, he attacks Eubulus and the other supporters of the accused, and calls upon the jury to vindicate the laws, and to make Meidias an example to all other offenders.

The Speech follows the obvious lines, but is powerfully written in a tone of warm indignation, varied here and there by pathos, when he recounts

the calamities of Meidias' former victims,¹ and even by a touch of something like humour, as when he imitates Meidias' own manner of addressing the People,² or when he sums up his consideration of the services of Meidias to the State.³

Where then is his brilliant record? What do his services to the State and his magnificent outlay amount to? I cannot see, unless we are to think of the house that he has built at Eleusis—so tall that it darkens the whole neighbourhood; or the pair of white horses from Sicyon which takes his wife to the Mysteries or wherever she pleases; or the three or four footmen who accompany him as he sweeps through the market-place, talking about his bowls and drinking-horns and wine-cups in a loud voice, so that the passers-by may hear.

The attitude which Demosthenes takes up—that of a champion of the rights of the democracy against the vulgar and insolent rich—is perhaps a little overdone; but the portrait of Meidias is vigorously drawn, and takes its place worthily beside those of other villains depicted in Greek and Roman oratory.

APPENDIX TO CHAPTER VI

(On the Affair of Phormio and Apollodorus)

The action of Demosthenes in connection with the dispute between Phormio and Apollodorus is so much disputed, and the questions raised are of such importance, owing to their bearing upon the estimate to be formed of his character, that they demand special consideration.

¹ *E.g.*, §§ 95 ff.

² § 203.

³ § 158.

Phormio was first the slave and then the confidential freedman of Pasion, the great Athenian banker. Pasion died in 370, leaving two sons, Apollodorus and Pasicles. In his will he provided that Phormio should marry his widow (receiving with her a considerable dowry) and should be one of the guardians of his younger son Pasicles; and that until Pasicles came of age, Phormio should rent the business, which included a shield-factory as well as the bank, paying a fixed rent to the estate, and making what profit he could for himself. It was intended that the property should remain undivided until Pasicles came of age, and should then be apportioned equally between him and his elder brother, Apollodorus. But the conduct of Apollodorus made this impossible. He appears to have been a man of some public spirit, and to have served more than once as trierarch with distinction. (We have already seen how he claimed the "Trierarchic Crown" offered in 360.¹) But his ambition to serve the State was more than compensated by his careless and extravagant habits, and he was at the same time extremely litigious. No less than eight of the speeches included, rightly or wrongly, among those of Demosthenes were written by or for Apollodorus, and we know that he appeared in many other lawsuits, and was ready to prosecute any one, relation or stranger, upon any provocation.

The result of Apollodorus' conduct was to imperil the security of the joint estate by the liabilities which he was always incurring: and in consequence of this, the guardians of Pasicles resolved to make a division of the property, without waiting for Pasicles to come of age, in order to save their ward's share. It was, however, arranged that Phormio was to retain the lease of the business, paying half the rent to Apollodorus, and keeping half for the benefit of Pasicles. In 362 Pasicles came of age, and Phormio's lease determined; he set up business as a banker on his own account, and was granted the citizenship of Athens, in recognition of his high qualities, as his master Pasion had been granted it before him. In the course of the negotiations which followed the termination of the lease, and again after certain legal proceedings which took place on the death of Apollodorus' mother in 360, Apollodorus gave Phormio a formal release from all claims. In spite of this, about the year 350, he entered a claim against

¹ See pp. 31-32.

Phormio for twenty talents. Phormio thereupon resorted to the procedure by *paragraphe*,¹ pleading that (whatever the merits of the case) the action brought was illegal, because Apollodorus had already given a discharge from all claims, and because the Statute of Limitations forbade such claims to be made after the expiration of five years from the winding-up of the trust.

A litigant who pleaded a *paragraphe* had the right to be heard first, and Phormio, who, owing to his foreign descent and his unfamiliarity with the courts, did not speak in person, was represented by his friends, one of whom delivered the speech composed for him by Demosthenes. This speech not only made good the technical plea, but also dealt in a manner which seems almost mercilessly conclusive, with the original case. It further attempted to meet the jealous attitude adopted by Apollodorus towards Phormio—once his father's slave, but now his stepfather—and emphasised the services rendered by Phormio not only to Apollodorus and his family, by the preservation of their property for them, but also to the State. Above all the speaker insists on the value of honesty in business, in contrast to the spendthrift life and dishonest litigiousness of persons like Apollodorus. The moral force of the speech proved irresistible. Apollodorus did not receive one fifth of the votes of the jury, and therefore incurred a very heavy fine, in addition to the loss of his case.

But Apollodorus would not accept his defeat without a struggle. As Aphobus had prosecuted one of Demosthenes' witnesses, so Apollodorus prosecuted one of the witnesses who had supported Phormio. As in the former case, so in the latter, the witness was one whose evidence was unimportant; Phormio's justification of the *paragraphe* would have been conclusive without it. Nevertheless any conviction for false-witness would almost certainly have led to a new trial of the original case, and a new trial instituted under such circumstances would not have been likely to terminate in favour of Phormio.

Now among the speeches of Demosthenes there have descended to us two written for Apollodorus in prosecution of this very witness, Stephanus; and it has naturally been felt that if, after his impassioned oration for Phormio, Demosthenes changed sides, and assisted Apollodorus in the attempt to overthrow a verdict

¹ See above, p. 33.

which he himself had done most to secure and to justify, he did not act like an honourable man. Nor would this be his most serious deflection from a high standard of honour in the matter. For the manner in which the First Speech against Stephanus treats the case is even more discreditable, if it is the work of Demosthenes. He argues that the very documents on which he had relied to prove Phormio's plea in the previous trial are either non-existent or are forgeries by Phormio himself; and whereas he had in the former speech paid an eloquent tribute to Phormio's high character and distinguished services, he now attacks him in a scurrilous and ungentlemanly manner, coupling the attack with the grossest insinuations with regard to Apollodorus' own mother and brother. Apollodorus himself might conceivably have spoken thus; but if Demosthenes carried the art of writing in the character of his client so far as this, we can only say that it proves his ability more conclusively than his honour. The case against Stephanus was in fact a very bad one; to most of the contentions of the speaker the reply is either actually contained in the Speech for Phormio, or is such as suggests itself immediately; and the skill of the advocate is not sufficient to conceal their weakness.

Unfortunately no final decision as to the authorship of the Speeches against Stephanus is possible. The Second Speech, indeed, which is weak both in argument and in style, no one now believes to be the work of Demosthenes; possibly it is a subsequently written version of a reply made by Apollodorus on the spur of the moment. But in regard to the First Speech the arguments for and against Demosthenes' authorship are almost equally divided. As regards the internal evidence there is, on the one hand, little in the style or the argument which would have suggested that it was not his work, had it not been for the inconsistency of the attitude adopted in this speech with that assumed in the Speech for Phormio; and one striking passage is almost identical with a passage in the Speech for Pantænetus, which is usually admitted to be Demosthenes' work. On the other hand, there are a few phrases and passages which do not read as if they were his, and which at least leave room for the possibility that the Speech was composed by another. A certain monotony of expression—particularly in the use of connecting particles and pronouns—has been thought to be unlike Demosthenes, and the parallelism with the "*Pantænetus*" does not prove identity of

authorship, since identical passages sometimes occur in different orators.¹

But the question is further complicated by external evidence. It is clear that Demosthenes was thought to have done something dishonourable in connection with Apollodorus and Phormio; but what he was originally accused of was not the composition of speeches for both sides. "What idea," asks Æschines, "are we to have of a born traitor? Is he not a man who treats those who have to do with him and trust him, as you have treated them?—a man who writes speeches for money, to be used in court, and shows them to the other side? You wrote a speech for Phormio the banker, and got your fee; and you showed it to Apollodorus, who had prosecuted Phormio on a capital charge."² This can only mean that Demosthenes showed Apollodorus his Speech for Phormio in the original trial. (The charge is called a capital one by a slight exaggeration, not unparalleled in Greek oratory, because the sum involved was so great that Phormio, if condemned, would be obliged to go into exile.) It is possible that the explanation which certain scholars³ propose is the true one—that Demosthenes tried to reconcile Apollodorus to Phormio, and showed him the Speech to prove to him the hopelessness of his case, but in vain. It would be easy for Æschines to misrepresent this as an act of treachery to Phormio, while it is very difficult to suppose that if Demosthenes had actually treated Phormio as the writer of the First Speech against Stephanus treats him, Æschines and Deinarchus, who raked up every possible scandal against him, would not have made full use of the fact.

But if this is so, how are we to explain the fact that Plutarch⁴ and other late writers definitely state that Demosthenes wrote for both Apollodorus and Phormio? Plutarch says that it was like selling swords to both sides from the same factory. (This does not in itself seem to be a very grave offence; but the point perhaps lies in the reference to the occupation of Demosthenes' father.) Probably the statement is due simply to the fact that speeches for both were found in the Corpus of Demosthenic speeches, compiled in the first instance at Alexandria. A

¹ See above, p. 27.

² Æsch., *de F. L.*, §§ 165, 173.

³ Note 4.

⁴ Plut., *Dem.*, xv.

later writer, Zosimus (c. 500 A.D.), still further exaggerates the supposed iniquity of Demosthenes; and it may be that the whole story is based on a misunderstanding, which, when once started, went on enlarging itself.

Those who believe that Demosthenes did write the First Speech against Stephanus usually ascribe his conduct to political motives. We have seen¹ that just about this time, Apollodorus proposed a decree in the Assembly that the People should decide whether the surplus revenues should be used for military purposes, instead of passing automatically into the festival-fund. This was precisely in accordance with the policy which Demosthenes earnestly advocated in the very year of the trial of Stephanus, with a view to war against Philip of Macedon. But it is very doubtful whether such considerations could really have weighed with Demosthenes. Apollodorus' proposal was probably made in the same headstrong spirit as his many prosecutions; it was illegal; he was heavily fined for it; and it is probable that it did more harm than good to the cause which Demosthenes desired to forward. It is, moreover, difficult to suppose that any advocate who had triumphantly succeeded in a good case would take up a bad one against his former client in reference to the very same matter, whatever the political situation.

There is, therefore, at least good reason to hope that Demosthenes was not guilty of the atrocious conduct ascribed to him. If he was, there is little that can be said in extenuation of it. The plea that the relations of a speech-writer and his client were not so close as those of a modern lawyer with those whom he represents cannot help him much; and it does not even touch the real point of the gravamen—the utter heartlessness and want of good feeling shown by an attack upon Phormio's character as scurrilous as his previous eulogy had been noble. The eulogy, no less than the attack, viewed in this light, would be no more than a piece of cold-blooded trickery. All that can be said is that if Demosthenes did act thus, there is nothing in all the rest of his career—for his fierce attacks upon his own enemies are a very different matter—which is even remotely parallel to this action; and though this is no exculpation, it at least enables us to deny that such conduct was characteristic of him.

¹ Above, p. 201.

NOTES

1. Some historians assume that these mercenaries were sent by the Phocian leader Phalæcus. But this is nowhere stated in our authorities, and the Phocians were in alliance with Athens. It is at least equally likely that Taurosthenes induced some of the mercenaries hitherto employed by Phalæcus to come over to Eubœa by offering higher pay. If, however, Phalæcus deliberately sent them to oppose the Athenians, it must have been because the dissensions in the Phocian ranks had already reached a point at which, because the party opposed to Phalæcus was friendly to Athens, he himself chose to take the opposite line. This happened towards the end of 347 (see below, p. 238); but we have no evidence that early in 348 it was already so.

2. The date of the Eubœan expedition has been much disputed, and some historians place it in 350 or 349 rather than in 348. The following are the principal considerations which appear to determine 348 as the true date:

(1) Demosthenes was choregus in the year of the expedition and the Speech against Meidias was written for delivery in the archonship of the second archon after the one in whose year the choregia fell (*ἔπλεον ἔτος τοῦτ' ἐστίν*, § 13). Further (§ 111) Demosthenes was a member of the Council in the year of the Speech. Now supposing that his choregia fell in March, 348 (in the archonship of Callimachus, who held office from July, 349, to July, 348), the Speech must have been composed for the archonship of Themistocles, *i.e.*, for a date after July, 347; and in the archonship of Themistocles, 347-46, we know that Demosthenes was in fact a Councillor. Those who date the expedition and the Speech earlier suppose that he was also a Councillor in 350-49 or 349-8. This would have been legally possible; but as the Councillors were chosen by lot, it is hardly likely; and there is absolutely no independent evidence of his having been a Councillor in either of those years.

(2) The Olynthiac Orations, probably delivered in the summer and autumn of 349, know nothing of the Eubœan trouble.

(3) The Speech against Neæra, § 3, and the Speech against Meidias, § 197, make it certain that the citizen-expedition to help Olynthus fell in the same year as the Eubœan expedition.

(4) According to Æschines, *de F. L.*, § 12, the Eubœan envoys came before the Assembly to discuss terms of peace shortly before the capture of Phrynon by privateers, which took place during the Olympian truce. The truce fell in July, 348.

3. Grote is very probably right in assigning to the weeks immediately following the fall of Olynthus the disappearance of Chares from view. Antiochus was sent to look for him, and to tell him that the people of Athens failed to understand why, when Philip was on his way to the Chersonese, the Athenians did not even know where to find their general or the force which they had sent out; and Æschines (*de F. L.*, § 71) speaks of 1500 talents spent in the course of the war upon runaway generals, of whom he names Deiares, Deipyrus, and Polyphontes—men otherwise unknown to us. Grote connects the mission of Antiochus with a panic on the part of the settlers in the Chersonese, and it is very likely that rumours of Philip's alleged intention to proceed thither may have been circulated at this time. Schäfer (ii., p. 178) even thinks that Philip's generals were actually sent thither.

4. Schäfer in particular takes this view. The whole question is well summed up in Paley and Sandys' *Select Private Orations of Demosthenes*, ii., pp. xxxix ff. It should be added that it is very improbable that the Speech was composed either by Apollodorus himself, or by the writer who composed most of the extant speeches delivered by him.

CHAPTER VII

THE FIRST EMBASSY TO PHILIP

EVEN before the actual fall of Olynthus it must have become plain to most clear-sighted politicians that Athens was not in a position to carry on the war against Philip with success. She had let slip the opportunity which she might have taken in 349, of throwing herself with vigour into the defence of Olynthus, and in 348, when the Athenians realised somewhat more clearly the gravity of the situation, it was too late; for the movements in Eubœa led them to divide their forces, and neither their energy, nor the funds which they chose to consider available, were sufficient for the double task. The successful continuance of the struggle with Philip being thus impossible, the only course which sensible men could take was to come to terms with him.

Philip also was anxious for a suspension of hostilities. Athens was not indeed, from his point of view, so serious a foe as the Athenians liked to believe, and he could well afford to have patience before he proceeded to bring his rivalry with her to an issue. At the same time she was strong enough at sea to make the carrying out of his more

immediate objects much more difficult than it would otherwise have been. Her action at Thermopylæ in 352, and the determination which she had shown, even under the leadership of Eubulus, to maintain her position on the shore of the Hellespont, were sufficient evidence of this; and it would be easier for him both to advance his power in Greece itself and to confirm and extend his sway in Thrace, if he could come to some such arrangement with Athens as would get rid of, or at least delay and hamper, her interference with his movements. Further, he was suffering from the closing of his ports by Athenian ships, and the raids which Athenian commanders made upon his coasts.¹ Some have even thought that he had already in view the project of uniting all Hellas under his sway, in order to proceed to the conquest of the East; and that for this purpose he desired the co-operation of the Athenian fleet, which was as superior to his own, as his land forces were to those of Athens. However this may be (and there is no evidence upon the point), in the summer of 348, when the envoys from the Eubœan towns went to Athens to discuss the terms of the Peace to be made between Athens and the Eubœans, Philip authorised them to say that he too desired to come to an understanding.²

¹ Dem., *de F. L.*, § 315.

² Æsch., *de F. L.*, § 12. The last Athenian expedition to Olynthus had, doubtless already departed, but owing to bad weather had not reached its destination.

Shortly afterwards an Athenian named Phrynon was captured by Philip's ships in the course of a raid, during the time (so he asserted) of the Olympian Truce,¹ when, according to Greek custom, hostilities should have been suspended. He was ransomed, and on his return to Athens requested the Athenians to appoint an envoy to go on his behalf to Philip, and to ask for the restoration of the sum paid for his freedom. Ctesiphon was sent, and returned with a message from Philip stating that he had entered upon the war with Athens against his will, and would still be glad if it could be terminated. He added other friendly expressions; the message was welcomed by the People with enthusiasm, and a vote of thanks to Ctesiphon was passed.

Immediately afterwards, Philocrates carried a decree that permission should be given to Philip to send envoys to Athens to discuss terms of peace. Thereupon Lycinus (representing, according to Æschines, certain interested persons, who had stood in the way of a similar proposal of Philocrates before the return of Ctesiphon) impeached Philocrates for the alleged illegality of the decree,² and demanded the infliction of a fine of one

¹ *I.e.*, about the month of July. The object of the Truce was to allow all who desired to do so to travel to Olympia for the games without fear.

² Philocrates' decree may have run counter to a resolution to receive no envoys from Philip, forming part of the terms of alliance with the Olynthians (Schäfer, vol. ii., pp. 23, 166); but there seems to be no definite evidence as to the nature of the illegality alleged.

hundred talents. Philocrates, who was ill at the time of the trial, was defended by Demosthenes, "in a speech which lasted all day," and was acquitted. Lycinus failed to obtain a fifth part of the votes of the jury, and so became himself liable to a heavy penalty.¹

The action of Demosthenes in defending Philocrates may be explained in one of two ways, according as the trial of Philocrates is supposed to have taken place before or after the fall of Olynthus. If Demosthenes defended the proposer of negotiations for peace even before Olynthus had fallen, we can only suppose that he had already seen the hopelessness of continuing the struggle for the present, and had had the courage to act upon his changed conviction. On the other hand, it is improbable that he would really have consented to abandon Olynthus in the hour of her greatest need; and it is much more likely that the trial of Philocrates did not take place until some time after Olynthus had been taken.² For Phrynon can hardly have returned to Athens before the end of July, 348; some time must have elapsed between his return and that of Ctesiphon; and also between the proposal of Philocrates and his trial. It is probable therefore that the trial did not take place until some weeks at least—possibly months—after the fall of Olynthus, and by this time, as we shall see, Demosthenes was certainly

¹ *Æsch.*, *de F. L.*, § 14; *in Ctes.*, § 62.

² Note 1 at the end of the Chapter.

convinced of the necessity of peace, and could defend Philocrates without inconsistency.

The capture of Olynthus and Philip's treatment of the inhabitants and (together with them) of the Athenians whom he found in the city, caused a momentary revulsion of feeling in Athens against the proposed arrangement with Philip; and even Eubulus himself and his supporters were carried away by it. Eubulus addressed the Assembly in very strong terms in regard to Philip, praying (Demosthenes tells us¹) that perdition might seize him, and proposed to send embassies throughout the Greek world and "almost to the Red Sea,"² with the object of uniting all the Hellenes in opposition to Philip, and of summoning a congress for the purpose. These proposals were supported in speeches of a highly patriotic tone, and among those who spoke in their favour was Æschines—a man of somewhat humble birth, who had been first a schoolmaster, then an actor, and then a clerk in government offices, until he came into prominence as a supporter of Eubulus. He was a man of great talent, and a ready extempore speaker; and the magnificent voice with which nature had endowed him gave him a great advantage when addressing a people so impressionable as the Athenians. On the present occasion, Demosthenes tells us, Æschines quoted the decrees of Miltiades and Themistocles—the heroes of the

¹ *De F. L.*, § 291.

² *Ibid.*, § 304.

Persian wars—and the oath of allegiance taken by the young Athenian soldier on assuming his armour.¹ He doubtless pictured Athens as once more taking the leadership of a Panhellenic confederacy, as she had done in the Persian wars.

The embassies were sent.² Æschines himself went to Arcadia, where Philip had been intriguing with some of the leading politicians, and had evidently found favour; for the Athenian party among the Arcadians had already sent representatives to Athens through Ischander.³ On his return, Demosthenes says, ⁴ Æschines

reported to the Assembly the long and noble speeches, which, he said, he had delivered on your behalf before the Ten Thousand at Megalopolis, in reply to Philip's spokesman, Hieronymus; and he described at length the criminal wrong that was done not only to their own several countries, but to all Hellas, by men who took bribes and received money from Philip. Many a time in the course of his speech he called Philip 'barbarian' and 'devil' and he reported the delight of the Arcadians at the thought that Athens was now waking up and attending to affairs.⁵

He also gave an indignant account of the fate of the captured Olynthians, illustrating it by that

¹ *De F. L.*, § 303.

² As to the date of the embassies, there can be little doubt that they took place in the late autumn and winter of 348-7, though there is no direct evidence. Diod., XVI, liv., has obviously no chronological value.

³ *Ibid.*, § 303.

⁴ *Ibid.*, § 11.

⁵ *Ibid.*, § 305.

of the women and children carried off to Arcadia by Atrestidas,¹ and narrating how he had been moved to tears by the sight, and by the thought of the unhappy condition of the Greek world, in which such cruelties could go unpunished.²

The embassies, however, entirely failed to secure their object. None of the southern Greek States seem to have imagined at present that Philip's growing power involved any danger to themselves; and none of them had reason to be so much interested in the welfare of Athens as to join in a league for her benefit. It has indeed been suggested that Eubulus did not expect any result from these missions to the Greek States; that they were only sent in order to convince the People, who were momentarily in a militant mood, of the hopelessness of continuing the war, by demonstrating the isolation of Athens; and that the speeches of himself and Æschines (both at Athens; and at Megalopolis) were nothing but a piece of elaborate acting. Fortunately it is not necessary to ascribe such motives in order to explain their action. It is far more probable that the state of public feeling immediately after the fall of Olynthus was such that Eubulus resolved to make a desperate effort to bring about the Panhellenic coalition, which alone could offer to Athens the least chance of defeating Philip at that time. When this attempt failed, all parties alike must have seen the inevitableness of a Peace; and Demosthenes himself

¹ See above, p. 206.

² Dem., *l. c.*, § 306.

acted in concert with Philocrates in forwarding the negotiations, though, in the light of his subsequent conduct, we can have little doubt that he regarded the Peace only as an armistice, during which Athens might recover her strength and prepare herself to return to the struggle with renewed vigour.

Among the Athenians who had been taken prisoners in Olynthus were Iatrocles and Eucratus. (The latter is otherwise unknown; the former appears again as an ambassador to Philip.) The relatives of these men supplicated the Assembly in solemn form, laying an olive-branch upon the altar and beseeching the People to take steps to obtain the liberation of the captives; and they were supported by Philocrates and Demosthenes. In answer to their appeal, with which many others whose friends had been captured must have sympathised, the actor Aristodemus, who was on familiar terms with Philip in consequence of his professional visits to the Macedonian court, was sent to negotiate for their release.¹ Another actor, Neoptolemus, appears to have accompanied him, or at least to have travelled to Macedonia about the same time.² Iatrocles was set at liberty without

¹ *Æsch.*, *de F. L.*, §§ 15 ff.

² *Dem.*, *de F. L.*, §§ 12, 315. It is possible that Neoptolemus had been for some time bringing messages of good-will from Philip, even before Demosthenes had been convinced of the necessity of peace. For Demosthenes (*de Pace*, §§ 6, 7) describes how he had warned the People against Neoptolemus (though in vain), and this can hardly have happened after the fall of Olynthus.

ransom, and, on arriving at Athens, spoke of Philip's good-will towards the city. Aristodemus did not return for some time, owing (as Æschines tells us) to some matter of business, though others have supposed (less probably) that he was detained by Philip as a kind of hostage, when he heard of the embassies sent from Athens to the other Greek States. The Athenians became impatient at his absence, and at last—probably late in the summer of 347—the Council passed a resolution ordering him to return. He obeyed, and in his report to the Assembly again declared Philip's good-will to Athens, and added that Philip would gladly form an alliance with her. Demosthenes, who was a member of the Council for the year 347–6, and apparently an influential member,¹ proposed that the Council should not only pass the vote of thanks which was customarily given by the Council to a returning ambassador, but should also award him a crown.²

It was about this time that a fresh crisis occurred in the Sacred War, in consequence of which a serious complication was introduced into the relations between Athens and Philip. The war

¹ This is shown by the fact that on the entry of the Council into office, he was chosen to perform the solemn inaugural sacrifices on its behalf, and was appointed to other posts of dignity—among them those of leader of the mission sent to represent the city at the Nemean Games, and of priest to the Awful Goddesses, whose shrine lay in a cave beneath the Areopagus (*in Meid.*, § 114). See Note 2.

² Æsch., *de F. L.*, § 17.

had been dragging on indecisively. The Phocians retained possession of the important Bœotian towns of Orchomenus, Coroneia, and Corsiæ, as well as of the places which gave them command of the Pass of Thermopylæ—Alponus, Thronium, and Nicæa. But the Delphian treasury was exhausted by the expenses of the war; and it was found that some of the Phocian leaders had been enriching themselves out of the temple treasures. Phalæcus was deprived of his command, and replaced by Democrates, Callias, and Sophanes; but since his deposition only divided the forces, and the mercenaries still remained faithful to him, he was restored to the generalship, though the strife of the factions was not healed. At this point the Thebans and Thessalians, still unable to conquer their enemy, applied for help to Philip, in the name of the Amphictyonic Council. Philip appears either to have postponed giving an answer, or at most to have sent a few soldiers, wishing to reduce the Thebans to a lower depth of humiliation before coming to terms with them—so at least Diodorus says.¹ The Phocians appealed to Athens, and the Athenians promised to help them.² (The promise must have been made before Philip had definitely given his adhesion to the Thebans; it would hardly have been possible to give it afterwards without

¹ Diod., XVI, lviïi.

² Their readiness is doubtless explained by the attractive bait which the Phocians dangled before them—the control of Thermopylæ.

breaking off the negotiations for peace with Philip.) The Phocian envoys offered to place the strongholds commanding Thermopylæ in the hands of the Athenians, if they would send a force to take them over; and Proxenus, the Athenian admiral, was ordered to proceed to Thermopylæ at once. At the same time it was resolved to equip a fleet of fifty ships, and to call upon all citizens under thirty years of age, who were liable to service, to join the expedition.

But when Proxenus appeared at Thermopylæ, Phalæcus dismissed him in an insulting manner; and Archidamus, who came from Sparta in response to an appeal from the Phocian authorities, was similarly treated. For so strong was the dissension in the Phocian ranks that Phalæcus refused to acknowledge the acts of the rival faction (by which, it seems, the messages to Athens and Sparta had been sent); and he also insulted the heralds who came from Athens, in accordance with custom, to announce the religious truce at the season of the Eleusinian mysteries (September, 347), and imprisoned the envoys who had carried the appeal for help to Athens. Proxenus appears to have returned to his former station at Oreus, and the fifty ships which had been voted were of course not sent, though they lay ready in harbour in case of need.¹ For the Phocian people as a whole, the

¹ Dem., *de F. L.*, § 322. On the chronological difficulty see Note 3.

conduct of Phalæcus proved fatal, as will appear hereafter.

Philip seems not to have committed himself for some time to any definite step; for as late as the spring of the next year, all the parties interested appear to have been quite uncertain of his intentions.¹ He did, however, send his general Parmenio into Thessaly, to intervene in a dispute between the towns of Pharsalus and Halus in the interest of the former; and the treatment of Halus, as well as that of the Phocians, became a disputed question in connection with the peace-negotiations, to which we may now return.

Not long after the beginning of 346, Philocrates proposed a decree in the Assembly, that ten ambassadors should be sent to Philip to discuss the question of peace, as well as other matters that were of interest to both parties, and to request him to send plenipotentiaries to Athens, with whom peace might be finally concluded. Demosthenes was nominated one of the ten by Philocrates, Æschines by Nausicles²; and as the assistance of Aristodemus upon the embassy was desirable, owing to his previous friendly relations with Philip, Demosthenes moved a resolution in the Council that messengers should be sent to the towns in which Aristodemus had professional

¹ See below, pp. 268, 274.

² See above, p. 177. Nausicles was probably a member of Eubulus' party.

engagements, asking that he might be excused from fulfilling them.¹ The other members of the embassy were Iatrocles, Ctesiphon, and Phrynon (all of whom had, like Aristodemus, experienced Philip's favour), Philocrates himself, Nausicles, Dercylus, and Cimon. With them went Aglaocreon of Tenedos, as the representative of the allies of Athens.

Up to this point there is no serious doubt as to the facts (for although within a year or two, when the Peace had come to be regarded with disgust at Athens, both Demosthenes and Æschines were eager to disclaim all connection with the inception of the negotiations,² there can be no question that both were in fact prominently concerned in it). But from this point onwards the two orators—and they are virtually our only authorities—give quite different accounts of the facts at every stage; and neither of them scrupled to distort the truth when it suited their purpose, each being anxious to appear to have had nothing to do with Philocrates or with the steps which led to results so unwelcome to the Athenians as those which followed the Peace proved to be. Much therefore remains uncertain.

The discrepancy between the two accounts of the embassies begins even before the departure of the ambassadors from Athens. According to Demosthenes' story³—told in 343, when he wished

¹ Æsch., *de F. L.*, §§ 18, 19.

² Note 4.

³ Dem., *de F. L.*, § 13.

to convict Æschines of corruption, by proving that, having once been opposed to Philocrates, he had inexplicably altered his mind—Æschines came to him and suggested that they should act in concert during their mission, and should particularly keep an eye upon “that abominable and shameless man, Philocrates.” To this story Æschines replied, with justice, that such a proposal would have been absurd and even impossible, when he knew that Demosthenes had been supporting Philocrates from the outset and had been nominated a member of the embassy by him.¹ Æschines adds that Demosthenes (who especially associated with Aglaocreon and Iatrocles) made himself intolerable to his colleagues on the journey; and that when the ambassadors were discussing what they should say to Philip, and Cimon expressed his apprehension lest Philip should get the better of them in argument, Demosthenes boasted that he had an inexhaustible stream of arguments; and that what he had to say about the Athenian claim to Amphipolis and the origin of the war was so convincing that he would be able to “sew up Philip’s mouth with an unsoaked rush,”—to persuade Philip to restore Amphipolis, and to induce the Athenians to permit the return of Leosthenes, who had been banished from Athens for his misconduct of the war.²

Whether this tale was true or not, the ambassadors lost no time on the journey. They did not

¹ Æsch., *de F. L.*, § 20.

² *Ibid.*, § 21.

even wait at Oreus for the herald who had been sent in advance to procure a safe-conduct, and who should have returned to meet them there; instead of doing so, they sailed at once and came to Halus, which was being besieged by Parmenio, Philip's general; passing thence through the Macedonian camp, they came to Pagasæ, and did not meet the herald till they reached Larissa. On their arrival at Pella, they were granted an interview by Philip, and addressed him in order of age, the last place being assigned to Demosthenes, as the youngest member of the mission.¹

Æschines (from whom we get our only report of the interview) describes his own speech at length, and tells how he recounted the services rendered by Athens in the past to Philip's house and to Philip himself, the earlier history of the struggle for Amphipolis, the legendary grounds for the Athenian claim to that town, and the acknowledgment of that claim by Philip's father Amyntas. If, he concluded, Philip based his own claim upon his capture of the town in war, it could be justified only if the war was a war against Athens—which Philip had never admitted; for if it was not, he had taken from the Amphipolitans a town which belonged not to them, but to Athens. We can imagine that Philip must have smiled inwardly at this academic harangue, which Æschines retails without any consciousness of the futility of addressing legendary and historical arguments to one

¹ Æsch., *l. c.*, §§ 22, 25.

so little likely to be swayed by such considerations.¹ We do not know what the other envoys said; but at last it came to the turn of Demosthenes, and his colleagues, Æschines tells us, expected a grand fulfilment of his boasted intentions. But instead of rewarding their expectations, he broke down hopelessly from nervousness, forgot his notes, and lost the thread of his argument; and in spite of the kindly encouragement of Philip, who bade him not take his misfortune to heart as though he had broken down on the stage, he was utterly unable to proceed, and the interview was suspended.²

When the ambassadors had retired, Demosthenes attacked Æschines angrily—we have still only Æschines' word for the story—and declared that he had ruined the city and her allies; and, when he was asked for an explanation, demanded if Æschines had forgotten the exhaustion of the People and their intense desire for peace. "Or is it," he asked, "those fifty ships which have been voted,³ but will never be manned, that have made you so confident? For you have irritated Philip to such an extent by what you have said, that the result of the embassy is likely to be, not peace, but an interminable war."⁴ The meaning of this scene, if it ever took place, must be that Demos-

¹ Such arguments however were conventional in Greek diplomacy, and Isocrates uses them, even to Philip, almost *ad nauseam*.

² Æsch., *l. c.* §§ 34, 35. See Note 5.

³ The reference is to the ships which were to have been sent to Thermopylæ to join Proxenus. (See p. 238.)

⁴ Æsch., *l. c.*, §§ 36, 37.

thenes was himself intensely anxious for peace, in view of the helpless condition of Athens at the moment, and thought that, by opening the question of Amphipolis, Æschines had spoiled all chance of it. (It may even have been this fear which led him to break down before Philip.) Æschines had no time to answer this attack before the herald recalled them to Philip's presence to hear his decision. Philip proceeded to reply to each of the ambassadors in order, referring with special emphasis to the arguments of Æschines—Æschines himself tells the story—but making no allusion to anything that had been said by Demosthenes. His friendly tone disproved the truth of Demosthenes' apprehensions, and Demosthenes was so mortified at being proved in the wrong that he lost control of himself, and even behaved badly at the complimentary feast to which Philip had invited the ambassadors.¹ As to the substance of Philip's answer, we learn² that Philip undertook not to attack the Chersonese before the Athenians had come to a decision in regard to the Peace; and the ambassadors took with them a letter from him, promising in general terms to confer great benefits on Athens if he were granted alliance as well as peace.³

Demosthenes, according to Æschines' story, appears soon to have regretted his unfortunate conduct; and lest it should become known at Athens, he did his best on the way home to ingratiate himself with his colleagues, promising to

¹ Æsch., *l. c.*, §§ 38, 39. ² *Ibid.*, § 82. ³ Dem., *de F. L.*, § 40.

assist them individually in their private needs and their public career, and lavishing fulsome praises upon the address of Æschines to Philip; and while they were all dining together at Larissa, he even laughed at himself for his breakdown, and spoke with admiration of Philip's ability. Æschines expressed his agreement, and Ctesiphon went so far as to say that he had never seen so charming a man as Philip. "Ah!" cried Demosthenes, "neither of you would dare to speak of Philip in such terms to the People!" They declared that they would do so; and Demosthenes in turn declared that he would hold them to their promise, while at the same time he entreated Æschines to tell the People that "Demosthenes also had spoken in defence of the claim of Athens to Amphipolis."¹ (It is clear that the People had not yet realised that the recovery of Amphipolis, however nearly it might touch their pride, was not practically possible; and though the ambassadors must have known it well enough, none of them was anxious to admit it publicly.)

The ambassadors must have re-entered Athens about the end of March, 346. They first announced the result of their mission to the Council; and the Council, on the motion of Demosthenes, who spoke in laudatory terms of his colleagues, and of Æschines in particular, decided to propose to the People that a crown of olive should be awarded to each of them, and that they should be invited (in

¹ Æsch., *l. c.*, §§ 40-43.

accordance with custom) to a complimentary banquet in the Prytaneum—the Guildhall of Athens.¹

They next came before the Assembly, and spoke as had been arranged. Æschines and Ctesiphon used the language which Demosthenes had declared they would not dare to use, in praise of Philip's charm, his good memory, and his talents as a speaker; and Æschines described Philip as a thorough Hellene, and anything but a barbarian, as some called him.² Æschines also tells us that he remembered Demosthenes' request, and told the Assembly that he had left it to Demosthenes to say anything that might have been passed over in regard to Amphipolis. But when last of all Demosthenes rose, he turned upon his colleagues (says Æschines), and rubbing his head and making his usual fantastic gestures, rallied them upon their garrulity and their compliments to Philip. "I will show you," he said, "how to report the result of an embassy. Read the resolution under which we were sent." The clerk read it. "Well," he said, "these were our instructions, and we have fulfilled them. Here is Philip's answer, and it is for you to discuss it." This businesslike brevity met with some applause, though some (Æschines says) exclaimed at its maliciousness. Demosthenes proceeded:

Æschines thought Philip an able speaker; I did not. Any one else in the same position could have done nearly as well. Ctesiphon thought he had a

THE STATUE OF AESCHINES IN THE NAPLES MUSEUM

glorious face; to me Aristodemus the actor is just as handsome. He was, they say, a good companion to drink wine with. Our colleague Philocrates was better. It is stated that an opportunity was left me of speaking about Amphipolis; but Æschines would rather have given me a share in his life-blood than in his argument.¹ All this, in fact, is beside the point, and I propose simply that a safe-conduct be given to the herald who has come from Philip, and to the envoys who are about to proceed hither; that, when they have arrived, meetings of the Assembly be summoned for two days, to discuss the question of alliance as well as that of peace; and that, if you think we deserve it, a vote of thanks be passed to us for our services, and that we be invited to a banquet in the Prytaneum to-morrow. .

Demosthenes' mockery of his colleagues, if the scene really took place, was very unworthy of him; but he can hardly be blamed for proposing to carry out the ordinary formalities of Greek diplomacy, or for asking for the conventional expressions of approval from the Assembly; and his further motion, to give Philip's envoys seats of honour at the forthcoming Dionysiac festival was (like the banquet which he gave them) a natural civility, which his enemies afterwards misconstrued as evidence of disloyalty to his country.²

The two meetings of the Assembly were fixed, on Demosthenes' motion, for the 18th and 19th

¹ See Dem., *de F. L.*, § 254.

² Æsch., *de F. L.*, §§ 46-55; *in Ctes.*, § 63. For Demosthenes' reply, see *de Cor.*, § 28, and *de F. L.*, §§ 234-236.

of Elaphebolion—April 15th and 16th; and it was necessary, before any treaty could be made, that the situation should be discussed by the Synod representative of the allies of Athens, which was then meeting in the city.¹ The Synod, according to Æschines, resolved to agree to peace upon such terms as the Assembly should decide; they said nothing of an alliance with Philip; but added a proposal that it should be lawful for any Greek State to become a party to the Peace within three months. The effect of the acceptance of this proposal would clearly have been to give the Phocians a chance of securing themselves against Philip and the Thebans, by joining in the Peace. They also suggested that the decision of the Assembly should be postponed until the envoys sent in the winter by Athens to the Greek States had returned; probably because they wished to discover whether the other States would be likely to favour such a general Peace; and at a later time Æschines accused Demosthenes of having hurried on the meetings of the Assembly, without waiting for the return of those envoys, and so having ruined the chance of a universal Peace. It is very probable that Demosthenes did not desire to risk the chance of any change of feeling in Athens, and that, seeing peace to be necessary, he thought it best to conclude it as soon as possible.²

¹ See Marshall, *The Second Athenian Confederacy*, p. 334.

² The evidence, which is very perplexing, is discussed in Note 7. The view given in the text seems to be the most probable.

It appears to have been resolved on the motion of Demosthenes that the discussion in the Assembly should take place on the 18th of Elaphebolion, and the voting on the proposals made (but no speeches) on the 19th.¹ At the first meeting, Philocrates proposed that alliance as well as peace should be made with Philip, but that the Phocians and Halus should be excluded from it. (The envoys sent by Philip—Antipater, Parmenio, and, probably, Eurylochus—may already have made it plain to Philocrates that Philip would not admit the Phocians, and no doubt the terms proposed were virtually dictated by Philip.) This proposal Æschines denounced in very vigorous language, declaring that he could not support it so long as a single Athenian remained alive.² Instead of it, he upheld the proposal of the Synod of the allies, which would have given the Phocians and the people of Halus an opportunity of participating in the Peace, since it allowed three months during which any State might declare its adhesion to the treaty.³ Demosthenes also supported the allies' proposal, and the Assembly broke up under the impression that peace would certainly be made, but that for the alliance it would be better to wait for three months or so, in case a general arrangement should then seem desirable.⁴ On the

¹ Æsch., *de F. L.*, § 65.

² Dem., *de F. L.*, § 14; Æsch., *de F. L.*, § 63.

³ Æsch., *in Ctes.*, § 71.

⁴ *Ibid.* See Note 8.

next day, despite the motion which Demosthenes had carried in regard to the procedure, there was clearly considerable discussion as well as voting.¹ But the two accounts of the proceedings are entirely different. Demosthenes claims to have spoken in favour of the resolution of the allies, and implies that he was opposed to the making of an alliance with Philip; he declares that the People would not even listen to Philocrates, who had proposed alliance as well as peace; but that Æschines rose and supported Philocrates, denouncing those who reminded the Athenians of the deeds of their forefathers in ancient days, and expressing his intention of proposing a law that the Athenians should assist no Hellenic people by whom they had not previously been assisted—meaning that in the present case they should not support the Phocians.² Æschines, on the contrary, declares that he did not speak on the second day at all³; and that the sentiments imputed to him by Demosthenes were a distortion of those which he uttered on the first day, in reply to inflammatory speeches by certain orators, who tried to prevent the making of peace at all, and pointed to the Propylæa and the Acropolis, and appealed to the memory of Salamis and the tombs and trophies of the Athenians of old. In answer to such fire-

¹ Æsch., *de F. L.*, §§ 65-67, denies that there was any discussion; but in the *in Ctes.*, §§ 71 ff., he himself gives an account of the discussion on the second day of the debate.

² Dem., *de F. L.*, §§ 15, 16, 311. ³ Æsch., *de F. L.*, §§ 66.

brands, Æschines declared, he had urged that while it was well to bear these great traditions in mind, it would also be well if the People were to imitate the wisdom of their forefathers, without falling into their errors and their unseasonable passion for strife; he had held up to them as a warning the disasters brought about by the rash policy of Cleophon in the latter part of the Peloponnesian War, and as an example the battles of Plataeæ, Salamis, and Marathon.¹ But as to the second day, he states that Demosthenes himself supported Philocrates, and showed to a certain Amyntor (who was ready to give evidence of the fact) a resolution to the same effect as that of Philocrates—proposing alliance as well as peace with Philip—which he had himself drafted and was ready, if necessary, to hand in to the chairman.² In the Speech against Ctesiphon³ he goes farther, and declares that Demosthenes rose without leaving time for any one to anticipate him, and said that the proposals of the previous day were idle, unless Philip's ambassadors agreed to them; that it was wrong, however much they disliked the mover and the name of an alliance, to "snap off the alliance from the peace"; and that instead of waiting for the tardy adhesion of the other States before making the alliance, they should settle the question of peace or war for themselves.⁴ Demos-

¹ Æsch., *de F. L.* §§ 74-77.

² *Ibid.*, §§ 67, 68.

³ *In Ctes.*, §§ 71, 72.

⁴ Almost the very opinion which Dem., *de F. L.*, § 307, attributes to Æschines!

thenes then (so Æschines says) called Antipater and asked him directly whether he would accept the Peace without the alliance, and received a negative answer. This of course meant that any one who desired the Peace must give way on the question of the alliance.

Thus Æschines and Demosthenes each accused the other of supporting the resolution of Philocrates as against the proposal of the allies, and of thus becoming responsible for the exclusion and subsequent overthrow of the Phocians. (It must be borne in mind that the accusations were made at a time when they had become declared enemies, when the overthrow of the Phocians had caused the Athenians to regard the Peace with detestation, and when each of the orators desired to prove to the jury that he had supported the side which had since become the popular one.) Can we form any reasonable opinion as to their real attitude at the time? What seems clear is that on the 18th of Elaphebolion it appeared likely that a Peace would be made which would leave the door open to the Phocians and the people of Halus, and to other Greek States, if they decided within three months to join in an alliance; and this proposition both Æschines and Demosthenes supported. It is also tolerably clear that between the debates of the 18th and the 19th something happened which convinced certain of the politicians that such a Peace was impossible—Philocrates had probably known this before—and this can only have been

the discovery that Philip was absolutely resolved not to agree to such terms. This must have been intimated to them by Philip's envoys. That being so, what course was open to one who, like Demosthenes, believed peace to be necessary for the time? What but to attempt to convince the People that they must give up the proposal of the allies, and accept peace on Philip's own terms, viz., the making of a Peace and an alliance at once, without waiting three months? The most obvious way of doing this was that which, according to Æschines' account, Demosthenes adopted, viz., putting the question publicly to Antipater in the Assembly; and it is highly probable that, as Amyntor told Æschines, Demosthenes had a consequential motion drafted and ready. But even when they heard Antipater's reply, the Assembly were not ready to give up the plan which they had approved of on the previous day; and it is probable that before they consented they were led in some way or other to believe that they were not really sacrificing the Phocians to Philip and the Thebans by making the alliance at once. How was this managed? The Phocians and Halus were passed over in silence; Philocrates' motion was introduced, but they were not mentioned by name; and the explanation was given, so Demosthenes says,¹ by Æschines and his friends that Philip could not receive the Phocians openly as allies, owing to his

¹ Dem., *de F. L.*, § 321; comp. Phil. II, §§ 12, 28, and see Note 9.

own existing relations with the Thessalians and Thebans; but that when the Peace was made he would act in such a way as to satisfy the Athenians. If this was so, Æschines also had changed his mind in the night, and that is perhaps the most probable account of the matter; though Æschines may have sincerely believed that Philip would act in the manner described. Nor do we find any statement that Demosthenes on this occasion expressed any other belief.

But even with these assurances before them, the People were not induced to agree to the proposal of Philocrates, until Eubulus told them bluntly that unless they accepted it (of course in its new form, without any express mention of the Phocians or Halus) they must prepare for immediate war, pay a war-tax, and devote the festival-fund to military purposes.¹ This of course was the plain truth. Philip held all the cards; and unless peace were made on his terms, there must be a war, and the People must make those very sacrifices which they had so steadily refused to make. The threat was sufficient. It was resolved that the Athenian People and their allies should make peace and alliance with Philip and his allies, and none were specially mentioned or excluded. Further, it was agreed that each of the two parties to the Peace should retain what it possessed at the time when the Peace was made²; and the treaty also contained various provisions in reference to freedom of trad-

¹ Dem., *de F. L.*, § 291.

² Hegesippus, *de Hal.*, §§ 18, 26.

ing and the suppression of piracy.¹ The same ten ambassadors were appointed to receive the oaths of Philip and his allies in confirmation of the treaty.

But who were the "allies" on either side? The advocates of peace, in order to get their proposal carried at all, had left this point indefinite; and it was this that was a principal cause of the troubles and misunderstandings of the next few years. The politicians themselves can hardly have misunderstood the situation. The allies and possessions of Philip included all whom he had conquered, and his possession of Amphipolis and Poteidæa could not be questioned. The allies of Athens were those who were actually members of her confederacy, and were represented in the Synod of the confederacy. Philip evidently did not intend, and could not be expected, to recognise her right to make peace in the name of any others. It was no small thing that the possession of the Chersonese, with the exception of Cardia, was now guaranteed to her.²

But obviously a less precise interpretation of the term "allies" was also current in popular language, and there was no science of international law to lay down definitions. Consequently not only orators at Athens, but even diplomatists sent to Philip's court, could make a show of arguing

¹ "Philip's Letter," § 2; comp. Hegesippus, *l. c.*, §§ 12-13.

² Dem., *de F. L.*, § 78.

that the allies of Athens included any people or persons with whom she had a treaty of friendship, or to whom she had promised support—the Phocians, Halus, and even Cersobleptes.¹ (This prince, though he had been forced to give hostages to Philip, was no doubt still formally on terms of friendship with Athens²). It was even argued at a later date that Amphipolis still belonged to Athens by right.³

Difficulties arose from this cause almost immediately. For, a few days after the decision had been made, the Athenians and the allies represented in the Synod, in pursuance of a motion proposed by Philocrates, took the oath to maintain the Peace, in the presence of Philip's envoys. No representative either of the Phocians or of Cersobleptes took the oath⁴; but a representative of Cersobleptes claimed to do so; and at a later time, Demosthenes and Æschines each tried to blame the other for his exclusion. Probably both were agreed at the time that Cersobleptes' envoy could not legitimately be included, and it fell to Demosthenes, as president of the Assembly held on the 25th of Elaphebolion, to give a formal ruling to that effect.⁵

When the tangled evidence is carefully studied, there can be little doubt that up to the point at

¹ Dem., *de Cor.*, § 27.

² Æsch., *de F. L.*, § 9; *in Ctes.*, § 61, describes him as the "friend and ally of the city."

³ See below, p. 312. ⁴ Æsch., *in Ctes.*, §§ 73-75. ⁵ See Note 10.

which the Athenians swore to the treaty, Demosthenes had not changed his mind as to the necessity of making peace, and although on the first day of the debate he had made an effort to confine the treaty to a Peace, without an immediate alliance, and so to save the Phocians and Halus, he had immediately seen the necessity of giving way upon these points, and had acted accordingly. If this is so, it is impossible to relieve him of the responsibility (which he shared with his colleagues) for the consequences of the Peace, however vehemently he may have wished to repudiate it afterwards. Not that the responsibility really involves any blame, for he was fully justified in carrying into effect his conviction of the necessity of peace at the time; he was acting as the interests of his country demanded; and there is no sign, up to this point, of any serious division of opinion among the leading politicians in Athens. It is only in their respective records or falsifications of the facts, and in their comments upon them in the light of their subsequent dissensions, that differences appear. If Demosthenes is to be blamed, it is not so much for helping to make the Peace, as for trying afterwards to disown his action.

For from this point onwards the friction, which seems to have arisen from comparatively trivial and personal causes, between Demosthenes and the other ambassadors, became rapidly transformed into definite opposition, accompanied by ill-will which neither he nor they took any pains

to conceal. To him, the Peace was no more than an armistice, rendered absolutely necessary by circumstances, but only tolerable because it might be turned to good account, if the opportunity were taken of preparing for a resumption of the struggle. They, on the other hand, desired a lasting Peace, such as was inconsistent with Demosthenes' ideal of national honour. No sooner, therefore, was the Peace made, than he began to think about the means of preventing Philip from gaining fresh power or extending his influence farther southward. From this point of view, every action of his colleagues which seemed to further Philip's plans, or to offer any prospect of permanence to the Peace, presented itself to his mind as treason; and this attitude of mind developed so rapidly, that (if what he declared three years later was true) he was very unwilling to serve upon the Second Embassy, and would not have done so, but for the fact that, on his previous visit to Macedonia, he had promised to take ransom-money to some of the Athenian prisoners there.

NOTES TO CHAPTER VII

1. *Æsch.*, *de F. L.*, § 15, says simply ὑπὸ δὲ τοῖς αὐτοῖς χρόνοις "Ὀλυμπός ἐέλω. In the Speech against Ctesiphon, § 62, he places the acquittal of Philocrates before the beginning of Themistocles' archonship (July, 347), but does not give any nearer indication of date.

2. At a time when both *Æschines* and *Demosthenes* were anxious to disown all connection with the Peace, *Æschines* (*in Ctes.*, § 62) accused *Demosthenes* of having obtained his place in the Council by corrupt means for the express purpose of support-

ing Philocrates. But there is no doubt that this story was an invention on the part of Æschines. He made a similar assertion about Timarchus (*in Tim.*, § 106); and, as Schäfer remarks, he had not thought of this calumny against Demosthenes at the time of the Speeches on the Embassy.

3. Æsch., *de F. L.*, § 134, says that the letter of Proxenus, giving an account of the treatment he had received, and the report of the heralds of the Mysteries were read at the same meeting of the Assembly as that at which the Peace was discussed. This has caused much difficulty; for the resolution of Philocrates, constituting the First Embassy, can hardly have been proposed for some months after the rebuff by the Phocians. Consequently Schäfer and others have thought that the Mysteries referred to were the "Lesser Mysteries," held in March and therefore (according to Schäfer) announced in February. But was there any solemn announcement of these to all the Greek states, as there was of the Eleusinian Truce in September? Grote is probably right in saying that there must have been many discussions of the peace-negotiations before Philocrates' resolution was proposed, and that the news from Thermopylæ was brought during one of these.

4. Æschines disclaims connection with the early negotiations in the *de F. L.*, § 20, and the passage in the Speech against Timarchus, § 174 (delivered in 345), does not prove that he claimed any credit for the Peace then (as is sometimes supposed), but only that he expected Demosthenes to charge him with responsibility for it, along with Philocrates—in other words, that by the time of the trial of Timarchus, Demosthenes wished to disavow his own share in the matter. In the *de Cor.*, §§ 20–24, Demosthenes disclaims all share in it very insistently, but none the less falsely.

5. Schäfer, ii., p. 204, thinks that Æschines is exaggerating Demosthenes' breakdown, and that Demosthenes, as the last speaker, naturally had not much to say, but summed up briefly. This is only conjecture, though we have no means of testing the truth of Æschines' story. Plutarch's statement (*Dem.*, xvi.) that Philip paid special attention to Demosthenes' arguments may refer to the Second Embassy, or may quite possibly be unhistorical.

6. Æschines (*in Ctes.*, § 67) says that Demosthenes at first

proposed that the Assembly should meet on the 8th of Elaphebolion, April 5th, without waiting for the arrival of Philip's envoys. It is of course conceivable that he proposed a preliminary discussion on that day, though it is inconceivable that any one should have suggested the giving of a final decision without hearing what Philip had to say. Æschines treats the proposal as sacrilegious, since the 8th of Elaphebolion was a feast of Asclepius and the day appointed for the Proagon, a ceremony preliminary to the Dionysiac festival. For whatever reason, the 18th and 19th, when the festival would be over, were actually chosen.

7. The testimony as regards the allies' proposal and the envoys mentioned in it is found in Æschines, *de F. L.*, §§ 57-62, *in Ctes.*, §§ 64-70, Dem., *de F. L.*, § 16, *in Ctes.*, §§ 22, 23. The chief points are as follows:

(1) Demosthenes (*de F. L.*, § 16) is indignant with Æschines for making certain remarks on the 19th of Elaphebolion, in the presence of the envoys who had come from the Greek States in response to the embassies sent from Athens, on the advice of Æschines, in the vain hope of getting up a united war against Philip. This must refer to the embassies sent out late in 347 (above, pp. 232-33).

(2) To this Æschines replies (*de F. L.*, §§ 57 ff., and *in Ctes.*, §§ 67, 70) that there were no envoys present from any Greek States, and that the Athenian ambassadors sent to the States had not returned; but he seems to suggest that it was still worth while to wait for their return, and states that the Synod of the allies wished to delay the decision of the Assembly until their arrival; and he attacks Demosthenes for having forced on the meetings of the Assembly, without waiting for the envoys, and for having thus spoiled the chance of making a universal Peace and so saving the Phocians.

(3) To this Demosthenes answers (*de Cor.*, §§ 22, 23) that there were no Athenian envoys out on a mission to the Greek States at the time, for the Greeks had all long ago been tried and found wanting.

There are thus two points (often confused with one another by modern writers) upon which the orators contradict one another:

(1) Demosthenes states that there were *envoys from the Greek States* present in Athens on the 19th of Elaphebolion, who

had come in response to the Athenian embassies sent in the previous winter. Æschines denies this; and Demosthenes himself (*de Cor.*, § 23) implies that the Greek States had generally failed to respond to those embassies. If therefore any States at all had sent envoys to Athens, it is probable that very few had done so (see below).

(2) Æschines states that certain *envoys sent from Athens to the Greek States* had not yet returned, but were still out on their mission on the 19th of Elaphebolion. (As a matter of fact some of those sent in the winter had certainly returned—he himself, for instance.) Demosthenes replies that there were *no* Athenian envoys then out on a mission to the Greek States. It is strongly in favour of Æschines' statement, that in the *de F. L.*, § 60, he quoted the actual decree of the Synod of the allies, expressly asking that the Assembly should meet "when the envoys had returned to Athens and reported the result of their mission." It is difficult to avoid concluding that there must have been *some* Athenian envoys out on a mission at the time, and they must have been either some of the envoys sent in the winter of 347-6 to get up a united war against Philip (in which case Æschines is misrepresenting the facts—in the *de F. L.*, § 57, though not in the *in Ctes.*, § 64—in describing the object of their mission as a united war *or a united peace*); *or else* envoys sent after the mission of the ten ambassadors to Philip, to invite the Greek States to join in a general Peace. Kahrstedt (*Forschungen*, p. 67) adopts the latter alternative; but there is no real evidence of the sending of such envoys, and it is highly improbable that so soon after the sending of envoys to propose a united war, the Athenians would have sent others to propose a united peace. The first alternative therefore is the more probable—that some of the envoys sent in the winter had not yet returned, and that the allies thought it desirable to wait and ascertain from them what was the feeling of the other Greek peoples before finally concluding peace. (Although the embassies had on the whole proved a failure, some of the Greek peoples may actually have sent envoys to Athens in response, as Dem., *de F. L.*, § 16, implies, and if so Æschines was telling a falsehood in denying it; though it seems almost more likely, in view of his confident challenge to Demosthenes, that he was speaking the truth, and that Demosthenes was telling a false-

hood in order to exaggerate the shockingness of Æschines' language by stating it to have been used in the very presence of the envoys. Demosthenes is also probably wrong—*de Cor.*, § 23—in saying that *no* Athenian envoys were still out on a mission.) Demosthenes probably did not wish, for the reason given in the text, to delay the conclusion of peace by waiting for the return of the envoys.

8. Demosthenes' account of the proceedings of the 18th of Elaphebolion is probably less accurate than that of Æschines. He says (*de F. L.*, § 144) that the Assembly on that day ratified the proposal of the allies, and was on the point of summoning Philip's envoys to inform them of the decision, when Æschines forced an adjournment of the question until the next day. But by his own motion, no voting could take place on the first day; the only possible "ratification" on that day can have been in the form of applause; and the adjournment of the decision to the next day was the result of his motion, not of any action of Æschines. (The procedure laid down in his motion was not followed on the second day; but there was clearly some good reason for setting it aside, and this must have commanded the assent of the Assembly. No such reason can have been suggested on the first day, upon which there seems to have been no excitement or difficulty.)

9. Demosthenes implies that the statements of Æschines and his friends as to Philip's promises and intentions were made on this occasion as well as later, in July, not only in his speech in 343 at the trial of Æschines (§ 321), but also in 344 in addressing the Assembly itself, which it would be less easy, perhaps, to mislead as to what had taken place in its presence, viz., Phil. II, §§ 12, 28, —where references are made to the promises on the strength of which Philip *obtained the Peace*. This could only apply to April, and not to July, when the Peace had already been made. Whether the statements were really made by Æschines himself, and not rather by Philocrates, may be doubted; but if they were made by Æschines, it can hardly be doubted that he believed them; for, as we shall see, he was really anxious to save the Phocians, and Demosthenes' account of Æschines' attitude towards them is the grossest perversion of the truth. It was Demosthenes himself who was prepared, if necessary, to sacrifice the Phocians, in order to obtain peace for the time.

10. According to Æschines, *de F. L.*, §§ 82-86, the Assembly met on the 25th of Elaphebolion, and Demosthenes was in the chair. At this meeting Critobulus of Lampsacus appeared, and demanded in the name of Cersobleptes (who had not been mentioned in the debates of the 18th and 19th) to be allowed to swear to the Peace among the allies of Athens. Aleximachus proposed that he should be permitted to do so; but Demosthenes refused to put the motion—the passing of which he said, would mean the breaking off of the Peace—until he was practically forced to do so. (Æschines does not say that the motion was carried.) On the other hand Æschines (*in Ctes.*, § 73-5) says that Philocrates proposed, and Demosthenes put to the vote, a resolution that the oath should be taken that day by the allies represented in the Synod then sitting; and that as there was no representative of Cersobleptes present in the Synod, Cersobleptes came to be excluded. It is obvious that these two accounts are not consistent with each other. Both speeches, however, agree that Cersobleptes was in fact excluded; for in the *de F. L.*, § 86, Æschines states that Demosthenes had charged *him* with driving Cersobleptes' representative away, when the oaths were taken, immediately after the Assembly had been broken up. Plainly the exclusion of Cersobleptes was a thing which the Athenians came afterwards to view with disfavour, and both orators try to disclaim responsibility for it. (Grote, Pt. II., ch. 89, and Hogarth, *Philip of Macedon*, p. 91, both assert that Cersobleptes' representative *was* allowed to take the oath. This seems to be contrary to the evidence. The "Letter of Philip" appears to preserve a tradition of his exclusion, though it is there ascribed to the generals of Athens, doubtless because the oaths were taken in the generals' office.)

CHAPTER VIII

THE SECOND EMBASSY AND THE PEACE OF PHILOCRATES

THE ten ambassadors, upon their appointment to serve on the Second Embassy to Philip, were instructed to administer the oath of fidelity to the treaty just negotiated, both to Philip, and also to the magistrates of the peoples allied with him, in their several cities.¹ They were further ordered to negotiate for the ransom of the Athenian prisoners who were in the hands of Philip and his subjects, and to do all that they could to serve the interests of Athens in regard to the general situation.² Demosthenes states also that it was forbidden that any of them should have a private interview with Philip; but it is very doubtful whether an instruction implying so strong a mistrust of them and so overtly insulting both to them and Philip was really ever given them; though it was obvious, and it may have been stated, that only their collective action would be binding upon Athens.

As soon as Philip's envoys had left the city,

¹ Dem., *de F. L.*, § 278.

² Æsch., *de F. L.*, §§ 103, 104.

Demosthenes urged his colleagues to sail as quickly as possible to the Hellespont, where Philip was now operating, in order to prevent him from making conquests in that region before taking the oath, and then excusing himself on the ground that he had not yet sworn to a Peace. He knew, he said, that the Athenians would not go to war afresh on account of places so conquered, when they had once agreed to peace on general grounds. His colleagues, however, displayed no haste; and since no regular meeting of the Assembly was due for some time, he procured a decree of the Council (which had been given authority on the matter), ordering the ambassadors to depart at once, and to join Proxenus, who was still lying off the north coast of Eubœa with his ship; Proxenus was then to convey them without delay to Philip, wherever he might be. The ambassadors left Athens and met Proxenus at Oreus; but instead of sailing, delayed there in order to enable Æschines to obtain an appointment as representative or consul of Oreus at Athens.¹ At last they went, not to the Hellespontine region by sea, but by land to Pella, and arrived there twenty-three days after leaving Athens. All the time Demosthenes protested against their dilatoriness with increasing emphasis.²

¹ He is mentioned as holding this office in 343-2 by Dem., *de Cor.*, § 82.

² Dem., *de F. L.*, § 156. (Most of our information about the Second Embassy comes from §§ 150-178 of this Speech.)

After their arrival at Pella, they had still to wait twenty-seven days before Philip himself appeared. The interval was spent by Demosthenes in making arrangements for the ransom of all the Athenian prisoners he could find; and for this purpose he had taken with him a talent of his own money.¹ In the meantime Philip had captured a number of strongholds in Thrace,—Doriscus, Serrhium, the Sacred Mountain, Myrtenum, and Ergiske,²—and had taken Cersobleptes prisoner. Cersobleptes' kingdom thus passed into Philip's power, though he did not remain in captivity—his son being already a hostage—but was allowed to remain nominally in possession of his dominions, though no doubt under conditions.

When, at a later date, the Athenian Eucleides was instructed to ask Philip for an explanation of his action in Thrace, Philip answered that he was within his rights, since he had conquered these places before he met the ambassadors or took the oath.³ Demosthenes lays great stress on these conquests, as evidence of the faithlessness of Philip, and of the injury done to Athens through the dilatoriness of his colleagues. But in reality Philip's defence was a good one; and the fact that in 341 Demosthenes⁴ thought it worth while to

¹ The attempt of Æschines, *de F. L.*, §§ 99, 100, to cast discredit upon Demosthenes' charitable work is unconvincing.

² Some of these places were probably unimportant, and Æschines scoffs at Demosthenes for his lamentation over places which no one had ever heard of before.

³ Schol. on Dem., *de F. L.*, § 162.

⁴ Phil. III, § 15.

invent the certainly false statement that Philip had already taken the oath when he captured these places, shows that he was conscious of the soundness of Philip's case when the facts were truly stated. Indeed, according to Æschines' account¹ of the matter, Philip had captured Cersobleptes and the Sacred Mountain on the day before the Athenians themselves took the oath, and therefore before the ambassadors left Athens; and as evidence of this, he produced a letter from Chares. We cannot then tell whether the delay of the ambassadors really injured the interests of Athens at all. But, however this may have been, Philip was within his rights in acting as he had done: for these strongholds did not belong to Athens at all, but to Cersobleptes; and though Chares was defending them, it was for Cersobleptes, who was at war with Philip, that he was doing so; and Philip kept his word faithfully in not attacking the Chersonese. Further, it may be doubted whether Philip would really have brought to an end his conquests in Thrace (as Demosthenes said he would have), even if the ambassadors had proceeded directly thither and received his oath. He would have been under no obligation to do so; but the Athenians were so accustomed to regard that region as within their own sphere of influence, that Demosthenes found no difficulty (in 343) in speaking of the loss of it as a loss to Athens, and as due to the disobedience of the ambassadors to

¹ Æsch., *de F. L.*, § 89-92.

their instructions. No doubt the conquest of Cersobleptes' kingdom brought Philip nearer to the Chersonese, and this is what Demosthenes had sought to prevent; but he had no right to complain that Philip was playing Athens false. Nor is there any proof that the delay of the ambassadors was due to their corruption by Philip or his agents, though, if Demosthenes was telling the truth, they did contravene their instructions.

When Philip returned to Pella, he found there representatives of many Greek States, each hoping to persuade him to fall in with their wishes. He made himself agreeable to all, and seems to have led all alike to imagine that they were certain of success. Besides the Athenian ambassadors, there were envoys from Thebes, bent upon urging Philip to cross the Pass of Thermopylæ and terminate the Sacred War in their interest; there were Spartans, who hoped for the commission of the Delphian temple to the care of their kinsmen, the Dorians of Mount Parnassus, and also doubtless wished to deprecate Philip's intrigues with their enemies in the Peloponnese; there were Phocians, who had every reason to attempt to agree with the adversary quickly; and there were Eubœans, who in all probability were not well disposed towards Athens, and desired to retain Philip's support.

Philip appears to have courted the good-will of the Athenian representatives by lavish generosity. Demosthenes states that offers of large

sums of money were first made privately to each of them; that when one of them refused—he coyly abstains from mentioning his own name—Philip sent a large sum to them all in common; and that when he himself prevented the acceptance of it in this form, his colleagues divided the sum among themselves, in addition to what they had already received. For his own part, he tells us, he asked Philip to use the money, which he was offering the ambassadors, to redeem the captive Athenians from those of his subjects who had come into possession of them, and that Philip, not liking to reply that Demosthenes' colleagues had taken the money, consented to do this, but postponed the fulfilment of his undertaking, promising to send the prisoners back in time for the Panathenæa.¹ How much truth there is in this story, apart from Philip's promise to send home the prisoners, we cannot tell. Æschines declared that the other ambassadors, having learned wisdom from the trick played on them by Demosthenes on their previous journey,² kept aloof from him,³ and this may have helped to make him unduly suspicious of them. But that Philip tried to secure friends for himself in Athens by lavishing presents upon the ambassadors is more than probable, when we know the use which he made of Macedonian gold elsewhere; the pretext of hospitality to his guests was a convenient one, and may have served to

¹ Dem., *de F. L.*, §§ 166–171.

² See above, p. 245.

³ Æsch., *de F. L.*, § 97.

quiet their consciences. That scrupulous abstention from all appearance of evil, which is demanded of public servants at the present day, was not expected, or at least was rarely found, in ancient Greece.

The Theban envoys, Demosthenes tells us, proved absolutely incorruptible; though it may be doubted whether he is right in concluding that the success of the Thebans was due to the impression made upon Philip by the conduct of their ambassadors. Philip's perception of his interest was hardly likely to be affected by such edifying examples.¹

It is evident that there was considerable dissension between Demosthenes and his colleagues as to the way in which they were to carry out their instructions.² They first read their instructions aloud; and for some time the discussion turned on points of minor importance. At last, Æschines says, fearing that matters of greater weight would be overlooked entirely, he reminded his colleagues that while, of course, they were bound to receive the oaths of Philip and his allies, and to negotiate for the ransom of the prisoners, the real difficulty lay in the execution of the injunction to do their best for the interest of Athens in general. He himself interpreted this instruction as having reference to the advance of Philip to Thermopylæ,

¹ Dem., *de F. L.*, §§ 139-142.

² We are here dependent on Æschines (*de F. L.*, §§ 108-117) for our information.

which every one assumed to be about to take place, as it was evidently Philip's intention to bring the Sacred War to an end; and he understood the wish of the Athenian People to be that they should try to persuade Philip to humble the Thebans, and to set up the walls of those cities of Bœotia which the Thebans had destroyed. This had not been expressed in the decree of the Assembly, only because, if they failed in their object, it would be better that the intention of the People should not be generally known. It would be wrong, he declared, for the ambassadors of Athens to shrink from coming to the point, for fear of incurring the hostility of the Thebans. But Demosthenes (Æschines declared) loudly protested against this proposal, asserting that it was not the business of the ambassadors to set up strife between Athens and Thebes. "Let Philip go to Thermopylæ," said he; "no one will prosecute me for any movements of Philip with his army; but only for any words or actions that are not covered by our instructions." The result of the discussion was that it was arranged that each of the ambassadors should say to Philip what he thought it desirable to say.

When the time for their interview with Philip came, Demosthenes, though the youngest of the ambassadors, insisted on speaking first, in order that everything might not be said by others, before his turn came. He began his address to Philip by hinting that the ambassadors were not all

there with the same object, and proceeded to recount and emphasise his own services in forwarding the peace-negotiations, and the attentions which he had paid to Philip's envoys (upon which he laid such stress that his colleagues were thoroughly ashamed); he concluded with some very tasteless remarks about Philip himself, alluding sarcastically to the complimentary language that his colleagues had used. "I have not called you beautiful, for woman is the most beautiful thing on earth; nor a good drinker, for that, I conclude, is the way to praise a sponge; nor have I praised your memory; for such adulation is a task for a hireling sophist"; and he concluded amid the laughter of the assembled envoys of all the Greek States. Then Æschines rose, he tells us; and after remarking that the ambassadors had not been sent by the Athenians to defend their own actions, but had been chosen on account of their personal character, he spoke briefly of the ratification of the treaty, which they had come to obtain, and the other points definitely contained in their instructions; and then passed on to Philip's intended march to Thermopylæ. He begged Philip, if possible, to settle the questions in which the Amphietyonic powers were interested not by force of arms, but by a vote of the Council, after a regular trial of the case; but if that were impossible (as he supposed it was, since Philip's army was assembled and ready to start), he begged to put before Philip certain considerations arising

out of the constitution of the Amphietyonic League, and the oath which bound its members together. This oath the Thebans had transgressed in destroying the Bœotian cities; and although it was right to punish the sacrilege committed against the temple at Delphi, it was those who had committed it that should be punished, and not their countries. Finally, he called upon Philip not to ratify by force the wrong-doing of the Thebans; and warned him, if he supported Thebes, to expect no gratitude from her.

It is not very difficult to gather from this account what policy Æschines and Demosthenes respectively had in view. Æschines seems to have made an honest attempt to save the Phocians, and to turn Philip's forces against Thebes by a recital of the misdeeds of the Thebans and a discussion of constitutional questions, though these could hardly be expected to influence Philip. This was certainly the policy which the majority of the People of Athens would have approved, as the debates upon the Peace had shown; and Æschines was probably right in his interpretation of the rather vague instructions given to the ambassadors.

Demosthenes looked somewhat farther ahead. He saw that if Philip were to possess himself of the Pass of Thermopylæ, and so to obtain the power to march farther southward, when he chose, the best chance of averting the submission of Athens to him would be in a combination between Athens and Thebes; and he did not want to cut off

all hope of this by taking a line hostile to Thebes at Philip's Court. Accordingly he desired to confine the action of the ambassadors to the receiving of the oaths and the ransoming of the captives. His colleagues were probably aware of his object; but the prevailing dislike of the Thebans was so great that they could have no sympathy with him. "To crown all his faults," Æschines declared,¹ "he is a pro-Theban." But assuming—as Demosthenes assumed and his colleagues did not—that the Peace was to be only an armistice, and that the war against Philip was to be renewed so soon as Athens was in a condition to renew it, Demosthenes' caution was probably wise.

Philip's own aim was doubtless by this time tolerably well-defined. He intended, sooner or later, to conquer both Thebes and Athens, or to make satisfactory terms with them, but he was in no hurry, and for the time it was quite convenient to him to support Thebes, and so keep Athens powerless. He must have seen, as clearly as Demosthenes saw, that the one thing which might thwart him would be an alliance between Athens and Thebes. Besides this, his prestige would suffer if he at once threw over the Thebans, with whom he was supposed to be on friendly terms. He therefore went his way as he had planned, but played with the envoys of the various States until the time came for him to make the decisive move; and there is no reason to doubt that he led some

¹ Æsch., *de F. L.*, § 106.

at least of the Athenians (of course without making any official intimation) to believe that he really intended to march against Thebes, just as he led the Spartans to believe that he would fulfil their particular wishes. (So certain of this did the Spartans feel, that they ventured to use threatening language to the Thebans present.¹) He may even have led the Phocians themselves to hope for his favour.²

Philip declared his acceptance of the Peace at Pella³; and the ambassadors remained there until he was ready to proceed southwards. They then accompanied him and his army as far as Pheræ; and there the oaths were taken, Demosthenes says,⁴ in an insulting manner, in an inn; and the ambassadors, instead of visiting Philip's allies in their several cities and administering the oath to their respective magistrates, were content to receive it at Pheræ from the persons introduced by Philip as the representatives of his allies. Demosthenes perhaps exaggerates the importance to Philip of preventing the Athenian ambassadors from making a tour of the States allied to himself; but Philip may well have thought that they might cause mischief. That they disobeyed their instructions in not making such a tour seems certain; but they probably attached little importance to the manner of the ratification, so long as the

¹ *Æsch., de F. L.*, § 136.

² *Dem., Phil. III.*, § 11.

³ *Dem., de Cor.*, § 32. See Note 1 at the end of the Chapter.

⁴ *Dem., de F. L.*, § 158.

ratification itself was secured. The Phocians, the people of Halus, and Cersobleptes had already been tacitly excluded from participation in the Peace, and it is probable that Philip expressly declared, before taking the oath, that they were not covered by the treaty to which he swore.¹ The representatives of Cardia took the oath among the allies of Philip; and though Demosthenes afterwards² blamed his colleagues for permitting this, he was not justified in doing so; for Cardia had been specially excepted from the towns in the Chersonese given up to Athens by Cersobleptes, and had made alliance with Philip in 352.

The ambassadors had now finished their work, and had only to make their report. Demosthenes (who had already tried to go home in advance of his colleagues, in order to denounce their alleged misconduct, and had chartered a vessel for the purpose, but had been prevented) drew up a draft-report, which his colleagues naturally rejected. They sent instead a letter drawn up by themselves, announcing the accomplishment of their mission.³ They then proceeded homewards, bearing with them a letter from Philip, which Demosthenes afterwards asserted (no doubt falsely) to have been composed by Æschines at a private interview with Philip on the river Lydias in Macedonia,

¹ Dem., *de F. L.*, § 44.

² *Ibid.*, § 174; comp. *de Pace*, § 25; *de Chers.*, § 66.

³ Dem., *de F. L.*, § 174.

before they started for Pheræ.¹ At the same time Philip marched towards Thermopylæ, and arrived there before the ambassadors reached Athens. They re-entered the city on the 13th of Sciropheion, or about July 6th.

The ambassadors had now to meet the Council, the Assembly, and the Board of Auditors or Logistæ, whose approval was required in the case of every public official on the termination of his office. In the Council, Demosthenes immediately denounced his colleagues as guilty of misconduct upon the embassy, and recounted the history of the negotiations from the beginning. Doubtless the charges which he made against them in the first instance were based on their delay at the outset, their failure to go direct to Philip in Thrace, and the manner in which they had allowed Philip's allies to take the oath. (He can hardly at this stage have charged them, as he did afterwards, with injuring the prospects of the Phocians.) The Council were convinced by his statement, and withheld from the ambassadors the compliments which were almost invariably paid to such persons—the vote of thanks, and the invitation to a banquet in the Prytaneum.²

Demosthenes further states³ that he entreated

¹ Dem., *de F. L.*, § 36; Æsch., *de F. L.*, § 124. The gross insinuations which Demosthenes (*de F. L.*, § 175) makes against Æschines, who left Pheræ twenty-four hours later than his colleagues, are doubtless malicious inventions.

² Dem., *de F. L.*, §§ 18, 31, 32.

³ *Ibid.*, § 18.

the Council that Proxenus, who was still lying with his squadron off the north coast of Eubœa, should be instructed to go to Thermopylæ, and prevent Philip from crossing the Pass. This statement it is very difficult to believe; it may well have been manufactured after the overthrow of the Phocians, when he was very anxious that the People should imagine that he had tried his hardest to prevent that calamity, and that his colleagues had deliberately helped Philip to accomplish it. It is most improbable that he wished to break the Peace at once, when the object for which he had desired it was unachieved; and the interference of Proxenus would have rendered the prospect of the alliance with Thebes, for which he ultimately hoped, more remote. Nor do we hear anything about the bringing of such a proposal before the People.

The Assembly met on the 16th of Scirophorion (July 10th). According to Demosthenes' account of the proceedings, Æschines rose without waiting for the resolution drafted by the Council to be read,¹ and announced that he had persuaded Philip to grant all the desires of the Athenians, and that there was no occasion for the alarm which

¹ This resolution should have contained the proposal about Proxenus, had any such been made. It is very doubtful whether Æschines would have been allowed to anticipate the promulgation of a resolution of the Council; and probably Demosthenes was trying to account for the fact that no one had ever heard of his proposal about Proxenus, by saying that Æschines prevented them from doing so by rising first.

THERMOPYLAE, THE PASS
PHOTO BY DR. G. B. GRUNDY

his arrival at Thermopylæ had occasioned; for if the Athenians would only wait for two or three days, they would hear that Thebes was being besieged, that Thespiæ and Plataæ were being restored, and that the money due to the temple of Delphi was being exacted, not from the Phocians, but from the Thebans, who had themselves planned the seizure of the temple; for he had persuaded Philip, he said, that to plan such a deed was as impious as to commit it; and on this account the Thebans had set a price on his own head. He also gave the Assembly to understand that Philip would restore Athens to her old position in Eubœa—that was at least what the Eubœans themselves expected—and he added that there was yet another matter which he had arranged with Philip, but he did not wish to mention it yet, since even now some of his colleagues were jealous of him. This, Demosthenes says, was intended as a hint at the restoration of Oropus to Athens. Philip's letter was also read to the Assembly. In it Philip explained the fact that the ambassadors had not visited his allies severally by saying that he had himself retained them to help him effect a reconciliation between the two hostile Thesalian towns, Pharsalus and Halus. (Whether they really attempted to forward such a reconciliation we do not know. In any case Halus capitulated to Philip not long afterwards, and the inhabitants were banished or enslaved.¹) He

¹Dem., *de F. L.*, §§ 36–39.

also offered to do anything to gratify the Athenians that was consistent with his honour; but no specific promises were mentioned. This last fact made Demosthenes suspect that the promises made by Æschines were not genuine, and were made through the mouth of Æschines in order that no one might be able afterwards to accuse Philip himself of breaking his word. He therefore rose and denied all knowledge of any such intention on Philip's part, and tried to give his reasons for disbelieving in them; but being refused a hearing, owing to the insulting interruptions of Æschines and Philocrates, and the unwillingness of the People to disbelieve such good news, he contented himself with solemnly asserting his own disbelief in the promises, and disclaiming all credit, if they should be realised; while Philocrates remarked insolently, "No wonder that Demosthenes and I cannot agree! for he drinks water and I drink wine"; at which the audience laughed.

Such is Demosthenes' account of the debate,¹ and Æschines' attempt² to disprove its substantial truth is on the whole unconvincing. He denies that he made any promises: he admits that he had told Philip that in his own opinion Thebes ought to be a part of Bœotia, and not Bœotia a depend-

¹ Dem., *de F. L.*, §§ 19-26, 34-41, 44-46, 68, 102, 220; *de Cor.*, 35. Substantially the same account is found in the Speech on the Peace, §§ 9, 10, delivered very soon after the events and therefore more reliable; comp. also Phil. II, §§ 29, 30.

² Æsch., *de F. L.*, §§ 119-123.

ency of Thebes; and this, he says, was the only basis for Demosthenes' description of his speech. He also gives a slightly different version of the alleged conversation between himself and the Eubœan representatives. But when he admits so much, we can hardly fail to discern that he and his supporters did lead the Assembly to believe that Philip meant no ill to the Phocians. The result of the debate was the passing of a decree proposed by Philocrates, thanking Philip for his promised acts of justice, extending the Peace and alliance with Philip to posterity, and declaring that if the Phocians refused to surrender the temple of Delphi to the Amphictyons, Athens would take steps against those responsible for the refusal.¹ It is inconceivable that the Assembly should have passed this resolution, and recommended the Phocians to lay down their arms, had they thought that the Phocians would be treated as they afterwards were treated. Some one must either have caused them or allowed them to think that Philip would act generously towards them, and would not give way to the wishes of the Thebans. Æschines stated² at his trial in 343 that every one expected this, since no one believed that Philip would wish to render Thebes more powerful, and so more dangerous to himself; and that the ambassadors received the same impression from what they had seen and heard in Philip's camp. It may be taken

¹ Dem., *de F. L.*, §§ 47, 48; comp. §§ 55, 310.

² Æsch., *de F. L.*, § 136.

as certain, therefore, that Æschines' own speech on the 16th of Scirophorion confidently expressed that view, though it was probably expressed with perfect sincerity; and it is a confirmation of this, that in 345, at the trial of Timarchus, Æschines still spoke in sanguine terms of Philip's promises to Athens, and of his hope of their fulfilment.¹

Very shortly after the return of the ambassadors from the Second Embassy, Philip sent two letters, inviting the Athenians, now his allies, to send a force to join his own army at Thermopylæ, and to help in the decision of the questions in which the Amphictyons were interested. Now this was just what, if Æschines' account of Philip's intentions was correct, Philip might have been expected to do; and it is very probable that he desired to have an Athenian force at his side, to counteract the influence of the Thebans in case the latter should pursue an extreme policy, or attempt to aggrandise themselves to an inconvenient extent. Moreover, if the Phocians were to be helped at all, it might well seem that the Athenians had now an opportunity of using their influence to help them. The invitation, however, was declined, on the advice of Demosthenes and on the motion of Hegesippus. Different reasons are given for the refusal. On the one hand, the fear was suggested by the anti-Macedonian party that Philip would

¹ Æsch., in *Tim.*, § 169. See Note 2.

THE VIEW FROM THERMOPYLAE
FROM A DRAWING BY H. M. PICKARD-CAMBRIDGE

keep the Athenian soldiers as hostages¹; and on the other, the People may have been influenced, as Demosthenes asserts,² by the idea that the invitation showed that Philip meant no harm to the Phocians, and that therefore no action was necessary—a conclusion which they were always ready to adopt, and which was almost, if not quite, as much to Philip's advantage as their acceptance of his invitation would have been. Whether Demosthenes really feared treachery on Philip's part, or whether he was convinced that the Phocian cause was hopeless, and desired to avoid a fruitless collision with Thebes, there is no direct evidence to show. Æschines³ attributes Demosthenes' action expressly to his leaning towards Thebes, and he is very likely right.

The Assembly had appointed ten ambassadors to convey to Philip the resolution of the 16th of Scirophorion. Demosthenes had been nominated as one of the ten, but in spite of much pressure, had refused to serve, and had entered a sworn excuse.⁴ Æschines had also been elected, but either declined the office, or else failed to start at the same time as his colleagues, on account of illness.⁵ But when the ambassadors had travelled no further than Chalcis in Eubœa, they were met with the news that Phalæcus and the Phocian mercenary army had surrendered to Philip on the

¹ Æsch., *de F. L.*, § 137.

² Dem., *de F. L.*, §§ 51, 52.

³ Æsch., *de F. L.*, § 141.

⁴ Dem., *de F. L.*, § 122.

⁵ Note 3.

23d of Scirophorion (July 17th). There can be little doubt that treachery had been at work here; possibly Phalæcus, whose dissensions with the rival party among the Phocians have already been mentioned,¹ had had an understanding with Philip for some time; and certainly the terms of surrender permitted him and his eight thousand mercenaries to go to the Peloponnese unmolested, and thus left the Phocian people entirely at the mercy of Philip and his Theban and Thessalian allies; for the Spartan force, which had marched under Archidamus to help them, had returned home when they saw the position of affairs.

Demosthenes represents the surrender of the Phocians as the consequence of the resolution of Philocrates which the Assembly had passed on the 16th of Scirophorion, and therefore lays upon Philocrates and Æschines the whole responsibility for the fate of the Phocians. His argument, however, plausible as it is, must be pronounced quite unconvincing. Nothing could have saved the Phocians.² Financial exhaustion, internal division, and treachery were the cause of their overthrow; and it is extremely doubtful whether their surrender was in any way hastened by the news of the debate in Athens, or by the impression conveyed by the speeches of Æschines and his colleagues, that Philip intended to deal generously with the Phocians.² Æschines was quite justified in replying that it was not his speeches, but the

¹ See above, p. 226.

² Note 4.

presence of Philip's army, that brought about the capitulation; but that if any action on the part of Athens had aggravated the disaster, it was the refusal of the Athenians, on Demosthenes' advice, to join Philip and use their influence to save the Phocians.

On hearing of the capitulation of Phalæcus, the Athenian ambassadors at once returned home. The first to reach Athens was Dercylus, who gave the news to the Assembly during a meeting which was held at the Peiræus in reference to the dock-yards, on the 27th of Scirophorion (July 21st). The intelligence was received with the utmost horror and alarm by the People, who had evidently been relieved of all apprehension for their Phocian allies, but were now panic-stricken lest Philip should intend to march into Attica itself. On the motion of Callisthenes, the Assembly resolved to bring in the women and children and movable property from the country, to strengthen the frontier garrisons, to fortify the Peiræus, and to hold the rural festival of Heracles within the city walls. They also instructed the ambassadors to depart once more for Philip's camp, and to do what they could to ameliorate the situation. Æschines now went with his colleagues, and found Philip engaged, along with the Thebans, in celebrating the success of his plans with high festivities, in which (according to Demosthenes¹) they heartily joined. It was not, in fact, a time to make a de-

¹ Dem., *de F. L.*, §§ 128-130.

monstration of hostility to Philip by refusing his hospitality, and Æschines probably acted with tact, though by doing so he gave an opportunity to his enemies to misrepresent his motives.¹

Philip naturally made his mastery of the Phocian territory complete, garrisoning those towns which surrendered to him, and storming and destroying those which did not. At the same time, he sent a letter to Athens, announcing what he had done, and expressing his astonishment at the hostile attitude which the People had adopted, seeing that the Phocians were not included in the Peace.² He next summoned the Amphictyonic Council, as Æschines had previously urged him to do.³ The representatives of the Bœotians and the Thessalian tribes were doubtless in a majority, the Thessalians having of course recovered their Amphictyonic rights, of which the Phocians had deprived them. The Cœtæans proposed that all the adult males of the Phocians should be executed as guilty of sacrilege. Such savagery as this was not approved by the Council; but it was decided that the Phocian towns should be destroyed and the inhabitants settled in hamlets of not more than

¹ Demosthenes' argument (*de F. L.*, §§ 126, 127) that it was remarkable that Æschines should go to the Theban camp, if the Thebans had set a price on his head, is also misleading; for, as an ambassador, he would be safe in any case.

² The "Letter of Philip" cited in Dem., *de Cor.*, § 39, is probably not genuine; and Grote appears to be right in thinking that the real letter must have been more conciliatory in tone.

³ See above, p. 272.

fifty houses each—the hamlets to be at least two hundred yards apart; that the Phocians should be permitted to own the land, but should repay to the temple, by annual instalments of sixty talents, the value of the stolen treasure, and should not be allowed to possess horses or arms until the repayment had been completed; and that those who had fled should be liable to arrest anywhere, as being under a curse for their sacrilege.¹ The destruction of the towns was carried out by the Thebans, and the country was garrisoned with Macedonian troops.²

Æschines claims to have saved the Phocians from a worse fate by his efforts at the meeting,³ and in fact, when the customs of Greek warfare are considered, it is doubtful whether they were harshly dealt with. The wholesale enslavement and the executions which generally followed a capitulation were conspicuously absent; and the life in villages, and those very near to one another,⁴ was no serious hardship to an agricultural people. No doubt the condition to which they were reduced was painful enough. The Thebans probably went beyond the letter of the sentence, or at least spared no cruelty in carrying it out⁵; and most of those of the inhabitants who had the courage or the means withdrew into exile, in preference to submitting

¹ Diod., XVI, ix.

² Dem., *de F. L.*, § 81.

³ Æsch., *de F. L.*, §§ 142, 143.

⁴ Not, of course, near enough for the formation of large strongholds by uniting the villages.

⁵ Justin, VIII, v.

to the new conditions.¹ The pathetic picture which Demosthenes afterwards drew of the state of Phocis may not be greatly exaggerated.

Men of Athens [he says²], the horror and the immensity of this calamity have never been surpassed in our day in the Hellenic world, nor even, I believe, in the time before us. . . . The nature of the ruin which the unhappy Phocians have suffered may be seen, not only from these decrees, but also from the actual results of the action taken; and an awful and piteous sight it is, men of Athens. For when recently we were on our way to Delphi, we could not help seeing it all—houses razed to the ground, cities stripped of their walls, the land destitute of men in their prime—only a few poor women and children left, and some old men in misery. Indeed no words can describe the distress now prevailing there.

But it is doubtful whether, according to Greek ideas, the guilt of sacrilege was not lightly atoned for. For Orchomenus and Coroneia, the Boeotian cities which had helped the Phocians, there was no mercy. These the Thebans destroyed utterly, and sold the inhabitants as slaves; and the supremacy of Thebes over Bœotia was once more complete.

The Amphictyonic Council transferred to Philip the two votes which the Phocians had possessed at their meetings; and in order to punish the States which had given or promised assistance to the

¹ Dem., *de F. L.*, § 80.

THE STADIUM AT DELPHI (SCENE OF THE PYTHIAN GAMES)

PHOTO BY ALINARI

Phocians, the Council took from Athens the right to precedence in consulting the oracle, which they had hitherto enjoyed, and gave this also to Philip. The Spartans were forbidden to enter the temple at all. Finally, it was resolved that Philip should preside over the Pythian games at Delphi in September, 346.

The news of these decrees of the Council was received at Athens with great indignation, and was followed by a strong revulsion of feeling against the Peace and its advocates. Both Sparta and Athens refused to send their usual official deputations to attend the Pythian games, though Æschines appears to have been present as Philip's guest.¹ This omission the Amphictyonic Councilors were not disposed to pass over, and they sent an embassy to Athens, bearing a letter from Philip, and demanding that the Athenians should recognise him as an Amphictyonic Power in place of the Phocians. Æschines supported the request, pleading that Philip's action had been dictated by the Thebans and Thessalians, in whose hands he had been.² But so strong was the feeling against him and against Philip, that the Assembly would not hear him; and so, says Demosthenes, "he stepped down from the platform, and showing off before the envoys who had come from Philip, told them that there were plenty of men who made a clamour, but few who took the field when it was required of them."

¹ Dem., *de F. L.*, § 128. ² Dem., *de Pace*, § 22; Phil. II, § 14.

It would, however, have been the height of folly to have brought down upon Athens at this moment the united strength of Philip and the Thebans and Thessalians; and Demosthenes himself intervened to prevent this, and for this purpose delivered the Speech on the Peace, which has come down to us. Athens therefore gave the required recognition, and the Peace remained for the time undisturbed.

The result of the events of the two years between the autumn of 348 and that of 346 was that Philip had gained all that he had set out to gain, with no loss to himself, by the skilful handling of men and circumstances. He had secured a foothold to the south of Thermopylæ; his soldiers or allies held the Pass and the neighbouring town of Nicæa. (Nicæa itself was committed to the Thessalians, and they were also given control of Magnesia.) Phocis was held by Macedonian garrisons; and if he desired to march farther south there was nothing to hinder him. His recognition as an Amphictyonic Power had given him a definite position as the head of a Hellenic State, and the part which he had played as the champion of the god was one which brought with it a certain prestige.

Just after the Peace had been concluded at Athens in April, and before the surrender of the Phocians in July, the aged Isocrates addressed a letter to Philip, urging him to put himself at the head of the forces of the Greek States and lead a great expedition to the conquest of the East.

This union in a great enterprise, the old man argued, would heal the discords of the States with one another, and would enable them to rid themselves of the mercenary armies which were the curse of the time; for when the conquest of Asia was accomplished, the mercenaries could be settled in cities to be planted in these new dominions. In spite of the garrulity, the almost pathetic self-consciousness, and the want of all sense of proportion which the letter displays, there was something prophetic in the aged writer's advice. Philip may indeed have already conceived the great design which Alexander was destined to carry out; but it is at least possible that it was first suggested by Isocrates; though his fancy that the Greek States would take part in it voluntarily, before they were decisively conquered, and that their discords would vanish in the enthusiasm of a worthy common aim, was sadly out of date, and was never destined to be realised. Even if Philip was not inspired by Isocrates, the writings of Isocrates were widely read, and may have prepared men's minds for the announcement of the great design when the time came. Philip, however, was not yet ready. He at least had no misunderstanding as to the temper of the Greek States; and the hill-tribes on the northern and western frontiers of Macedonia claimed his attention. In the meantime he could feel tolerably secure against the fear of any hostile movement south of Thermopylæ.

The position of Athens was a far less enviable one than that of Philip. It was long before the People recovered from their remorse at the fate of their allies, the Phocians, for whose preservation they had done nothing; and Demosthenes took full advantage of this feeling to renew by degrees a more active hostility to Philip, whom he regarded with implacable determination as the enemy of his country's freedom.

The question of the responsibility of the several Athenian statesmen for the events of the years 348 to 346 is a very vexed one. But if the view which we have so far taken is correct, Demosthenes deserves no serious blame, however unattractive his behaviour on certain occasions may have been. He had plainly worked for the Peace from the time of the fall of Olynthus, until the Athenians swore to the treaty. But regarding the Peace simply as a breathing-space, to be spent in preparation for war, he had been anxious that the alliance with Philip should not be given too intimate or too permanent a character; and he had therefore strongly opposed Philocrates' motion to extend it to posterity, and he had attempted to secure the repulse of any friendly overtures which Philip made. Above all, he had looked forward to the future, and saw that the day would come when the Thebans might be ready and even glad to make alliance with Athens; and that whenever hostilities with Philip were renewed, the prime need of

Athens, herself a sea-power, would be that of a land army to co-operate with her. For this he could not look to Sparta, though Athens was on friendly terms with the Spartans. For not only was the day of the greatness of Sparta over, but the freedom of action of the Spartans would always be held in check by the other Peloponnesian peoples. He could look only to Thebes. And so, although it was impossible, in the existing state of feeling in Athens, to advocate this policy openly, he had opposed every step which might deepen the enmity between the Athenians and the Thebans; and had taken little or no part (so far as we can gather) in advocating the sending of assistance to the Phocians, although when their ruin was accomplished, he made it his main argument in his attacks upon his opponents—a proceeding which it is impossible to view without a certain disgust, and which can only be justified in a very slight degree by the patriotic ideal, the realisation of which he hoped to advance by such unhappy means.

But what is to be said of the part played by Philocrates and Æschines? Were they, as Demosthenes urged, the corrupt hirelings of Philip, working deliberately against what they knew to be the interest of their country? It is very difficult to prove this. With regard to the making of the Peace in the first instance, there need be no question that they acted in perfect good faith; and Æschines' change of mind between the two debates on the 18th and 19th of Elaphebolion—the time

from which many writers are inclined to date his corruption by Philip's envoys—was probably made with perfect honesty, when he found that Philip was prepared to allow the Athenians less latitude than they had hoped. The delay of the ambassadors in carrying out some of their instructions and their failure to fulfil others to the letter must be admitted to have been grave faults in men placed in such a position of responsibility. Yet it is extremely doubtful whether these faults had in fact any very serious consequences. It is very uncertain whether the ambassadors could have succeeded in preventing Philip from making good his conquests in Thrace; and even more uncertain whether any injury—beyond, at most, a trifling loss of prestige—was inflicted on Athens by the manner in which Philip's allies took their oath.

The most serious question was whether it was their doing that Philip was able to pass through Thermopylæ unopposed, and whether the doom of the Phocians had been brought upon them owing to the predictions which Æschines made to the Assembly in Athens: and the more carefully the facts are considered, the more certain it appears that it was not their doing. Nothing could, under the circumstances, have prevented the surrender of the Phocians; it is more than doubtful whether it was hastened by a single day owing to the decision of the Athenian Assembly; and if an Athenian contributed at all to the mitigation of their calamity, it was Æschines.

The strength of Demosthenes' charges against Æschines lay in the fact that Æschines' predictions had proved false. Was that Æschines' fault? Should he have realised beforehand that no reliance was to be placed upon the rumours which Philip had caused to be disseminated about the camp, or even upon the promises made by Philip himself? It was in his failure to realise this that his true weakness probably came out; and it is because, in spite of all that he should have learned from the conduct of Philip towards Athens in the matter of Amphipolis and Pydna, he was not on his guard, but was carried off his feet by the attitude of apparent friendliness and generosity which Philip adopted towards Athens, and also (it must probably be added) by the unconscious influence of Philip's lavish generosity towards himself and his colleagues, that he forfeits the claim to the highest character as a statesman. That he was definitely bribed to perform particular services and to deceive the People, in the manner alleged by Demosthenes, there is nothing to show. That he, and Philocrates to an even greater extent, benefited by Philip's munificence, and were influenced in their judgment of him accordingly, seems certain; and owing to this, they led the Athenians to believe much that was never destined to be realised. And although these promises and predictions were in all probability not the cause of the Phocian disaster, Demosthenes was right when he declared that all receipt of presents by an am-

bassador was criminal, and that when once there was money in one scale of the balance, it would always outweigh the reason in the other.

There is one other possible explanation of Æschines' conduct, though it seems a less probable one. It may be that he did not in fact place great reliance on the predictions which he made; but that he believed nevertheless that it was of vital importance to Athens that a lasting alliance with Philip should be made, and therefore thought himself justified in using these predictions and the promises contained in Philip's letter to gain that end, taking the risk of their being falsified. But this also, though it might be defended by a casuist, would not be a wise or proper course for a statesman.

Demosthenes certainly supposed that the conduct of Æschines was corrupt and traitorous throughout. His subsequent friendly relations with Philip, maintained in spite of the failure of his predictions, were, Demosthenes thought, a proof of this.¹ We know little of these friendly relations, apart from the fact that Æschines went to Philip's camp after the surrender of Phalæcus, and remained with him until after the Amphictyonic meeting and perhaps until after the Pythian games. But there is no reason to doubt that at this time he was exerting his influence, as a friend of Philip, on behalf of the unhappy Phocians; and the statements, which Demosthenes often makes,

¹ Dem., *de F. L.*, §§ 102 ff.

that Æschines shared Philip's joy at the success of his deception, instead of sharing the disappointment of the Athenians, rest on no evidence but Demosthenes' word, which in such a case is unfortunately worth nothing. Even if Æschines' friendship with Philip was as great as Demosthenes alleged, it would still have to be remembered that Philip was the accepted ally of Athens, that Æschines and his party believed the alliance to be the best thing for Athens as well as for Philip, that it was to be a permanent alliance, and that Philip's action in regard to the Phocians was no wrong to Athens under the terms of the treaty; and so it could hardly be a crime to be Philip's friend.

Our conclusion, therefore, is that Æschines deceived the People, only because he was himself deluded; that for his own delusion he was doubtless to blame; but that the consequences of the delusion and the deception were not in fact so serious as Demosthenes represented. Indeed the Athenians were perhaps prevented by them from going to war with Philip, when they were not well prepared to do so, in a fit of alarm at his arrival at Thermopylæ: and their worst result was the cruel disappointment of the People at their non-fulfilment—a disappointment the consequences of which were to no one more serious than to Philocrates and Æschines themselves.

For the rest, we have before us here, as in the rest of this history, two irreconcilably different

ideals of national policy. Demosthenes is filled with the passion for national freedom. Æschines and his party aim at a solid and lasting peace. Both ideals are defensible; and it was not yet certain that the former, any more than the latter, was impracticable. According as the one or the other appeals to us most strongly, we shall side with Demosthenes or Æschines; for, as has already been stated, it is upon the temperament of the critic rather than upon argument that the decision will depend. In the following chapters we shall trace the gradual rise of Demosthenes to a position in which he became as powerful as if he had been formally elected Prime Minister. His ascendancy was not attained all at once, and he had to suffer more than one rebuff; but in the end he succeeded in causing the People to realise that his ideal for Athens was also their own, and to face a decisive struggle in the cause of freedom.

NOTES TO CHAPTER VIII

1. It is disputed whether Philip actually took the oath at Pella or at Pheræ. Demosthenes, *de Cor.*, § 32, only says that *ὁμολόγησε τὴν εἰρήνην* (which might signify an informal declaration of acceptance)—and his expression in the *de F. L.*, § 44, *τοὺς ὄρκους ἐμελλεν δυνύναι*, if taken literally, implies that Philip, like the allies, took the oath at Pheræ. But Demosthenes, *de Cor.*, § 32, certainly means it to be understood that Philip had sworn to the Peace in Macedonia; otherwise he could have no ground for saying that the ambassadors ought to have left Philip, instead of accompanying his march southward. (He adds that they were bribed to remain with Philip.) Demosthenes may however be misrepresenting the facts; and the am-

resistance the Phocians could have offered without Phalæcus and his troops. Further, the calculation of dates by which Demosthenes (*de F. L.*, §§ 52-61) tries to prove that the debate in Athens was the cause of Phalæcus' surrender, is highly ingenious; but it is no proof.

CHAPTER IX

THE NOMINAL PEACE AND THE RENEWAL OF THE WAR

IN spite of the adverse judgment passed by the Council, Æschines had succeeded in persuading the Assembly to accept the motion of Philocrates, and to refuse to listen to Demosthenes' version of the proceedings of the embassy. There remained a third ordeal which he must face, before he could feel himself to be out of danger. The returning ambassadors had to undergo a scrutiny by the Board of Auditors or Logistæ; and any citizen could give notice that he intended to prosecute an official under an audit for misconduct in his office. Then the case must be tried by a jury, over which the Logistæ presided. If Demosthenes' statement¹ is true, Æschines made an attempt to evade this scrutiny; and Demosthenes alleged that he did so through consciousness of guilt, though his motive, when we consider the state of popular feeling immediately after the surrender of the Phocians, may well have been nothing worse than consciousness of danger. The attempt, however,

¹ Dem., *de F. L.*, §§ 211 ff.

failed, and when Æschines appeared before the Board, Demosthenes gave notice of his intention to prosecute him.

Demosthenes was supported by Timarchus, who had been, like himself, a councillor in the year 347-6, and had taken a somewhat active part in promoting the repair of the fortifications.¹ Timarchus had also proposed to the Council a measure forbidding any Athenian, on pain of death, to supply arms or fittings for ships of war to Philip.² But unfortunately Timarchus had in his youth been notorious for his gross immorality, and this gave Æschines an opportunity for delaying the attack upon himself and weakening its force. He prosecuted Timarchus himself for the sins of his past life, and demanded that he should be disfranchised as the law commanded. Despite the fact that Timarchus had filled many important offices, and that the offences alleged against him had been committed many years before, the record against him was too clear to be ignored; Demosthenes did not even venture to speak in his defence; and he was condemned and lost his citizenship. Some discredit was doubtless reflected upon Demosthenes owing to his association with Timarchus, and he waited for this to pass off before proceeding further with the prosecution of Æschines.³

¹ Æsch., *in Tim.*, § 80.

² Dem., *de F. L.*, § 28.

³ In the course of that prosecution, he replied, with very strong feeling, to part of Æschines' speech against Timarchus.

The trial of Timarchus probably took place early in 345. During that year, while the Athenians were actively restoring their fortifications and dockyards and rehabilitating the fleet,¹ Philip was busily engaged upon the internal organisation of Macedonia. As a security against the less settled tribes upon his frontiers, he planted colonies among them, which he supplied partly by the transplantation of some of his Macedonian subjects—not without some hardships to them,²—and partly, in all probability, by the transference to those districts of the inhabitants of the Greek towns which he had conquered in Thrace and Chalcidice.³ This policy had probably the double effect of introducing a civilising influence where it was much needed, and of breaking down, by the transference of inhabitants from place to place, the local subdivision of his kingdom, and so preparing his subjects for a more truly national unity.⁴ At the same time he probably re-organised the financial arrangements of his kingdom, increased his store of arms, and enlarged his fleet; and a few years of comparative peace greatly increased his material prosperity.⁵

Peace, however, in the full sense, was not long

¹ By the year 343, they possessed 300 ships of war, fully equipped (Dem., *de F. L.*, § 89). ² Justin, VIII, 5.

³ See Reichenbächer, *Die Gesch. der Athenischen und Makedonischen Politik*, pp. 8–10.

⁴ A few years later he carried the same policy further by planting colonies among the “barbarians” of Thrace. See below, p. 330. ⁵ Dem. *de F. L.*, § 89.

possible for him. Early in 344 we find him once more engaged in a campaign against the Illyrian tribes on his frontiers¹; and it was probably in this campaign that he was wounded in the leg, while in pursuit of the Illyrian King Pleuratus.²

When this expedition was over, he carried out—probably in the late summer of 344—a re-organisation of Thessaly, setting a tetrarch (no doubt a partisan of his own) over each of the four divisions of the country,³ and placing a Macedonian garrison in Thessaly. It was arranged that the public revenues of Thessaly should henceforth be paid to himself, and perhaps also that Thessalian troops should form a regular part of his army.⁴ In the same year the Thessalians elected him archon or overlord of Thessaly for his life.⁵ Philip accomplished these changes, it would seem, with great tact; the supersession of the local princes or “tyrants” was a popular step; and he appears everywhere to have turned the strife of factions to his own advantage. Isocrates, in a letter to Philip,⁶ written probably just after the work in

¹ Diod., XVI, lxi.

² Didym., *schol. in Dem.*, Col. 12. Meyer (*Isokrates' zweiter Brief*, pp. 760, 761) is probably right in inferring from the name of Pleuratus that it was against a northern branch of the Illyrians that his campaign was directed, and that Philip may have penetrated almost to the Adriatic.

³ Note 1 at the end of the Chapter.

⁴ Dem., Phil. II, § 22; *de Chers.*, § 14.

⁵ See E. Meyer, *l.c.*, p. 762, and his edition of Theopompus' *Hellenika*, p. 229, etc.

⁶ Isocr., *Ep. ii.*, § 21. For the date of this letter, see E. Meyer, *l.c.*, pp. 762, 763.

Thessaly was accomplished, congratulated him upon it, adding that it was far harder to capture the good-will of a people than to take their walls. In the same letter he begged Philip, in view of his high vocation, not to expose himself rashly to personal dangers, and urged him to court the good-will of Athens, and not to believe all the evil that he heard spoken of her. "You will never," he declared, "find a State that can do better service either to the Hellenes or to your own interests."

Philip had in fact some reason to feel vexation with Athens. Public opinion in the city had set strongly against him since the overthrow of the Phocians, and Demosthenes had done his best to encourage this unfriendly feeling. The Athenians had sent Eucleides—probably late in 346—to remonstrate with Philip in regard to the Thracian towns which he had taken before returning to Pella to ratify the Peace, and to ask for their restoration to Cersobleptes, and for the extension to that prince of the advantages of the Peace.¹ This request he naturally refused. But he was by no means anxious to re-open hostilities with Athens, and his whole policy from this time onwards goes to prove that he really desired, at this period, not, as Demosthenes incessantly asserted, the conquest of Athens, but a good understanding with her, and an alliance on friendly terms; though

¹ Dem., *de F. L.*, § 181.

the fact that Philip was bound to be the predominant partner in any such alliance must in any case have set Demosthenes against it. And so, while rejecting a demand which was not reasonable, Philip offered to cut a channel across the Chersonese at his own charges¹—an operation which would have provided the Athenian settlers in the Chersonese with a good line of defence against the incursions of the Thracians, and would probably have conferred a great benefit upon Athenian merchant-ships. The offer does not appear to have been accepted; and in the autumn of 344—probably about the time when Isocrates was composing his letter—envoys were sent, of whom Demosthenes was the chief, to the Peloponnesians, to counteract the influence of Philip there.

The Peloponnesian peoples were no nearer contentment than they had been for many years. We have seen how the Arcadians—those at least whose centre was at Megalopolis—had been compelled by the rejection of their appeal to Athens in 353 to rely upon Thebes, and the growing friendliness between Athens and Sparta had also induced other Peloponnesian peoples who were hostile to Sparta or afraid of her to enter into relations with Philip. The embassies from Athens after the fall of Olynthus had failed to arouse any feeling against Philip in southern Greece; the

¹ Dem., Phil. II, § 30; cp. Heges., *de Hal.*, §§ 39, 40. The exact date of Philip's offer is uncertain; but Schäfer (ii., p. 347) must be approximately right in placing it at this point.

Arcadians, Messenians, and Argives were all under the domination of parties which had an understanding with him, and he had helped them by sending them supplies of money and mercenary soldiers, and by requiring the Spartans to leave Messenia undisturbed.¹ Demosthenes and the other envoys now attempted to persuade them that Philip's friendship was untrustworthy, and was only offered in order that he might the more easily rob them of their freedom. Demosthenes reminded them of the final issue of Philip's alliance with Olynthus, and of the steps by which he had acquired his complete dominion over Thessaly.² But in spite of the applause which his eloquence called forth, Demosthenes had to confess that he had failed to make any impression³; the Arcadians soon afterwards passed various complimentary decrees in honour of Philip, resolving to erect his statue in bronze, and to welcome him within their walls, if he came to the Peloponnese; the Argives did likewise⁴; and before long envoys came to Athens from Argos and Messene (doubtless with Philip's approval) to make a formal complaint against the interference of the Athenians with their efforts to maintain their independence of Sparta.

About the same time Philip himself sent to

¹ Dem., Phil. II, § 15.

² *Ibid.*, §§ 20-25. He misrepresented, however, the attitude of the Thessalians to Philip; they were probably quite contented under his sway. ³ *Ibid.*, § 27. ⁴ Dem., *de F. L.*, §§ 261, 262.

Athens a formal remonstrance against the assertions of the Athenian orators that he had broken the Peace and had been false to his promises. He had, he declared, made no promises; and he demanded that the charges should be proved or withdrawn.¹ It is with this situation that Demosthenes dealt in the Second Philippic, a speech of which the first object was to convince the Athenians that Philip's plans were all being organised for the one purpose of subduing Athens; and that it was with this intent that he was courting the support of the Thebans and Peloponnesians, who were not, like Athens, prevented by any considerations of righteousness from forwarding his cause. In the latter part of the Speech he denounced the corruption of the orators who had brought forward the promises and predictions by which the People had been induced to consent to the Peace; he referred more than once to Philip's "breaches of the Peace," and upbraided his audience for their failure to take any steps to prevent the fulfilment of Philip's designs. The text of the answer which he proposed to give to Philip's envoys has not come down to us; nor do we know whether the Assembly adopted it.

The Speech is an eloquent one; and it is therefore the greater pity that—in so far as it assumed that Philip had broken faith with Athens—it should have been based upon a false hypothesis; indeed Philip's own promises, as contrasted with

¹ Liban., *Hypoth. ad Dem. Phil. II.*

the predictions of Æschines, seem to have been of the vaguest possible character. But that Philip was scheming for the ultimate overthrow of Athens, and deceiving her with offers of friendship until the convenient moment came, was a perfectly possible inference from the facts before the orator, viewed in the light of Philip's past dealings with other peoples; and a partial explanation, though not a justification, of the stress laid in the Speech upon Philip's "promises" may be found in the fact that the orator was preparing to carry out his threatened prosecution of Æschines, and doubtless desired to take every opportunity of impressing upon the People beforehand the main points of his case, chief among which was the alleged falsity of the promises conveyed and the predictions uttered by Æschines. There is every reason to think that the unpopularity of Æschines and his friends was increasing; and two events, which probably occurred soon after the delivery of the Second Philippic, are very significant of this.

Late in 344 or early in 343 the inhabitants of Delos laid before the Amphictyonic Council a request that the Athenians should be deprived of the control of the famous temple of Apollo in that island. (Whether the Amphictyonic Council had any traditional jurisdiction over Delos we do not know; but to have denied the right of the Council to decide the question might have involved the risk of an Amphictyonic war against Athens.)

Æschines was appointed by the People to present the Athenian case—a good appointment in itself, for Æschines was more likely than any member of the opposite party to carry weight with a body of whom the majority were allies of Philip. But the Council of Areopagus, who, for some reason unknown to us, had been given power to revise the choice of the Assembly, cancelled the appointment of Æschines; and Hypereides, an energetic supporter of Demosthenes, was sent in his stead.¹ The Amphictyonic Council, after hearing Euthykrates, the betrayer of Olynthus, on the one side, and Hypereides on the other, decided in favour of Athens,—possibly at a hint from Philip, who clearly desired to avoid causes of offence for the present.

An even heavier blow to Philip's friends was the condemnation of Philocrates, in the first half of 343, upon an indictment preferred by Hypereides for corruption and for not having given the best advice to the People.² Whether Philocrates had really been guilty of corruption we do not know. Demosthenes subsequently spoke as if the fact were notorious, and had been admitted by Philocrates himself, who, he said, used even to make a parade of his guilt, "selling wheat,³ building

¹ Dem., *de F. L.*, § 209; Hyper. in *Demadem*, fr. 76 (Oxford Text), etc.

² Hyper., *pro Euxenippo*, §§ 29, 30 (Oxford Text).

³ *I.e.*, wheat received from Philip, or bought with Philip's money. Dem., *de F. L.*, § 114.

houses, saying that he was going to Philip whether you elected him or not, changing Macedonian gold openly at the bank." Like Æschines, we are told, he had received gifts of land from Philip; like Atrestidas, he had brought home women captured in Olynthus.¹ Whether all this was true or not, he discerned that he had no chance of acquittal, and left Athens. He was condemned to death in his absence. In the course of the trial, Demosthenes, who expressed his surprise that Philocrates alone was accused of bringing about results of such magnitude, challenged any of Philocrates' colleagues, who had had no share in his misconduct and disapproved of his actions, to come forward and say so,—offering to accept the word of any one who made such a disclaimer. No one responded; and Demosthenes made much of this in the subsequent trial of Æschines, who would not "accept acquittal even when it was offered him," even though he had none of the excuses which some of his colleagues might have pleaded.² About the same time Proxenus was tried and condemned—we do not know on what charge—through Demosthenes' influence.³

The reply of the Assembly, whatever it was, to Philip's protest did not prevent him from sending Python of Byzantium (a pupil of Isocrates and an

¹ Dem., *de F. L.*, §§ 145, 309.

² *Ibid.*, §§ 116-118; comp. Æsch., *in Ctes.*, §§ 79-81.

³ Dem., *de F. L.*, § 280; Deinarch. *in Dem.*, § 63. See Schäfer, *ii.*, p. 369.

able speaker) to Athens early in 343, accompanied by envoys from his allies, to convey an offer to consider the amendment of anything that might be amiss in the terms of the Peace, and to express his regret that, when he was desirous of making the Athenians his friends, more than all the other Greeks, they were induced by self-interested orators to repel his overtures.¹ Æschines supported the representations of Python, while Demosthenes (as he tells us)²

would not give way before the torrent of insolent rhetoric which Python poured out upon the Assembly, but rose and contradicted him, and would not betray the city's rights, but proved the iniquity of Philip's actions so manifestly that even his own allies rose up and admitted it.

It was, however, decided to send Hegesippus as ambassador to Philip, to propose certain alterations in the terms of the Peace. Of these the most important was that the clause which ordained that "each party should retain *what they possessed*" at the time of making the Peace, should now be made to ordain that "each party should retain *what was their own*," an alteration which was intended, beyond all doubt, to reopen the question of the right to Amphipolis and Poteidæa. It was also resolved to propose the inclusion of all

¹ The mission of Python may have been in part the outcome of Isocrates' letter to Philip (see above, p. 290).

² *De Cor.*, § 136.

the Greek Peoples in the treaty, as well as the allies of the two contracting parties; to guarantee their autonomy and promise them aid against any aggressors; and to ask Philip once more to surrender the places taken from Cersobleptes in April, 346. It appears that the Athenians also laid claim to Cardia.

It is probable that the question of Halonnesus, which continued to be a matter of controversy in the next year, was already included among the subjects of negotiation between Philip and Athens.¹ Halonnesus was a small island near Sciathus. It was the stronghold of a pirate named Sostratus, who had probably been doing damage to Philip's ships. Philip had driven him out and taken possession of the island, and the Athenians, who claimed the ownership of the island, now requested Philip to restore it to them.

Hegesippus was a person devoid of tact and violent in speech, and gave great offence to Philip, who even went so far as to banish the poet Xenocleides, Hegesippus' host during his visit to Macedonia.² With regard to the proposals of the Athenians, Philip rejected at once the suggested alteration of the clause with regard to the possessions of the two parties, declaring that he had not

¹ The chief authority on this matter is the Speech of Hegesippus *de Halonneso*, which has descended to us among the speeches of Demosthenes. Hegesippus' authorship is denied by Beloch, *Gr. Gesch.*, ii., 539, but defended, more or less convincingly, by E. Meyer, *Isokrates' zweiter Brief*, p. 776.

² Dem., *de F. L.*, § 331.

offered, or authorised his envoys to offer, any such change. He was ready to include the other Greek peoples in the Peace; and to submit to arbitration both the question of the Thracian towns and the Athenian claim to Cardia—as he well might, his case being apparently a very strong one. He was also ready to go to arbitration in regard to Halonnesus, or to give the island to Athens as a free gift. On the advice of Demosthenes and Hegesippus, arbitration was refused, upon the ground that no impartial arbitrator could be found; and Philip was informed that the Athenians did not wish him to *give* them the island, but to *give it back*—a mere matter of syllables, at which Æschines and the comic poets of the time scoffed,¹ but one involving the whole question in dispute as to the ownership of the island. Philip naturally refused to do as he was bidden.

The Speech of Hegesippus which has come down to us was made in one of the debates about Halonnesus early in 342. It is thoroughly unreasonable in tone and argument, and in expression is sarcastic and violent; though the contention that it was beneath the dignity of the Athenians, to whom belonged the empire of the sea, to accept islands from Philip, or to go to arbitration with him, was calculated to win applause. On nearly every point raised in the Speech Philip could give a fair reply; and though it is uncertain whether modern international law would have admitted

¹ Æsch., in *Ctes.*, § 83; Antiphanes, fr. 169 (Kock).

Philip's right to the island (assuming that it had belonged to Athens before it was occupied by the pirate captain), it may also be doubted whether, seeing that the pirate had been suffered by Athens to remain undisturbed and to molest the traffic at his pleasure, the power who expelled him might not equitably claim to have taken the island from him and not from Athens.¹ At least Philip's offer to "give" it to Athens was a fair compromise; and the statement of Demosthenes, that no impartial arbitrator could be found, was little more than an intimation that he was working for a renewal of hostilities. Still Philip's patience was not exhausted; and though he retained Halonnesus, he as yet took no step which could give the Athenians an excuse for war.

At the same time as the mission of Python to Athens, early in 343, there arrived also an embassy from the King of Persia, asking for a renewal of ancient friendship between the Great King and the people of Athens.² The circumstances which led the King to send messages at this time to several of the Greek States are not precisely known, but it may be taken as certain that he was apprehensive of Philip's intentions with regard to Asia Minor. His viceroys in that region had displayed great independence while he was engaged in the reconquest of Egypt; and he may have been

¹ See Phillipson, *International Law of Greece and Rome*, vol. ii., pp. 132-151.

² Didym., *schol. in Dem.*, Col. 8. See Note 2.

desirous to obtain an alliance with some of the Greek States which would act as a counterpoise to the influence which Philip was likely to exert in favour of the viceroys in Asia Minor, as his intimacy with one of them, Hermeias of Atarneus, had shown. But the Athenians were in no mood at present to abandon their traditional enmity towards the King. It is highly probable, in view of his later policy,¹ that Demosthenes may have urged them to do so, in the hope of obtaining a powerful ally against Philip. But if so, he failed. The Athenians replied that their friendship would remain, so long as the King abstained from attacking the Greek cities in Asia Minor. This was of course tantamount to a refusal of the King's proposition. The Thebans and Argives, on the other hand, sent him substantial aid against Egypt, and it was largely this that enabled him to reconquer the rebellious province.

It was, in all probability, shortly after midsummer, 343, that the accusations of Demosthenes against Æschines came before a court of law, consisting of 1501 jurors, under the presidency of the Logistæ. The speeches of Demosthenes and Æschines have both come down to us, not indeed in the exact form in which they were delivered, but in that in which they were afterwards published, some alterations of the original text having been made, and some arguments inserted in each,

¹ Note 3.

PAPYRUS FRAGMENT OF DEMOSTHENES' SPEECH ON THE EMBASSY

in order to meet the adversary's points, or to correct the unfavourable impression which certain passages had made upon the jury.

The Speech of Demosthenes opened with a brief statement of the duties of an ambassador, and an outline of his proof, to be given fully afterwards, that Æschines had failed to fulfil those duties in any particular. The first half of the Speech consists mainly of a narrative of the events upon which the case turned; and we have already seen reason to conclude that the version which Demosthenes gave of the facts was in many ways a distorted one. The ruin of the Phocians and the capture of the Thracian towns by Philip were represented as entirely due to the corruption of Æschines and his colleagues. The second part of the Speech lays especial stress on the mischief wrought in Greece by traitors, and upon the deceptive and ingenious character of Philip's policy, which Æschines—so Demosthenes argued—had furthered. It also contains passages of self-defence against the charge of participation in the peace-negotiations, and of vehement personal attack upon Æschines, his relations and supporters. The reply of Æschines was largely composed of narrative. It was a businesslike and detailed answer to the charges made against him, and although it does not show the same oratorical force and emotional power as the speech of Demosthenes, it remains one of the most striking orations of antiquity. Æschines was supported by Eubu-

lus, whom we now see for the last time taking a conspicuous part in political controversy, and by Phocion, whose blunt honesty and courage always carried great weight. He was acquitted by thirty votes.¹

To what causes is the acquittal of Æschines to be attributed? The support given to him by Eubulus and Phocion doubtless counted for something; for in spite of the growing popularity of Demosthenes and the feeling of irritation against the authors of the Peace, the People strongly sympathised with Eubulus in his desire to avoid war and to defend the theoric fund against possible encroachments; and there was in all probability some fear (since Demosthenes is at pains to dispel it),² that the condemnation of Æschines would lead to a renewal of war with Philip. Again, the part played by Demosthenes himself in the earlier negotiations for peace could not really be disguised or explained away; and Æschines pressed strongly the point that Demosthenes was accusing him on the ground of transactions for which he himself shared the responsibility. That Demosthenes was conscious of this weakness in his position is shown by the great care which he took to define the issue.³ Æschines, he declared, was not being

¹ This was known to Plutarch (*Dem.*, xv) from Idomeneus of Lampsacus, a friend of Epicurus, and therefore almost a contemporary witness: comp. *Vit. X Orat.*, 840b, c; and see Note 4.

² *Ibid.*, §§ 134 ff., 341, 342.

³ *Dem.*, *de F. L.*, §§ 91-97, and 202 ff.

tried because the city made peace, but because she made peace on dishonourable terms and with disastrous results.

But, after all, the true reason for Æschines' acquittal was probably that Demosthenes could not prove him to be guilty. We have already seen that upon the most important points, Æschines had a good reply to the allegations brought against him; and more than once he turned the tables upon Demosthenes very effectively, and not only contrived to place his assailant's own conduct during the two embassies in a very unfavourable light, but also showed that Demosthenes had done less than he himself had done to help the Phocians, whose calamities, alleged to have been due to Æschines and Philocrates, were the starting-point of Demosthenes' most impressive argument. The fact that Æschines was actually supported by the testimony of some of the Phocian exiles must have told heavily in his favour. It is also probable that Demosthenes overshot the mark, even for the taste of an Athenian jury, in the grossness of the stories and suggestions which he produced in regard to Æschines and his friends. One story the jury actually refused to allow him to complete¹—the story of the ill-treatment of an Olynthian woman by Æschines, which Æschines declared to have been invented by Demosthenes.²

¹ Dem., *de F. L.*, §196 ff.; cf. Æsch., *de F. L.*, §§ 4, 154-158.

² Æschines brought forward Aristophanes of Olynthus to

The Speech of Demosthenes contained indeed passages of magnificent oratory, such as might well prove irresistible; the general principles to which he appealed were sound and nobly enunciated, however unjustified his application of them in this particular case; his unique power of convincing narration was never more impressively exercised, however untrue some parts of the narrative may have been; the wide prevalence of treachery and corruption in the Greek States was beyond question; and these causes, coupled with the strong dislike which prevailed for the Peace of Philocrates and its real or supposed consequences, perhaps account for the smallness of the majority by which Æschines was acquitted. It must also be remembered that though Æschines could not be shown to be guilty of corruption, and though no modern jury could possibly have condemned him, he had almost certainly profited to a considerable extent by Philip's friendship; and that though he was probably as sincerely convinced of the advantages to be gained by Athens through alliance with Philip, as Demosthenes was convinced of the opposite, his increased prosperity might well make others suspicious. But we cannot doubt that he was rightly acquitted, and that Demosthenes, though passionately sure that the only sound or worthy policy for Athens was one

testify that Demosthenes had offered him money to vouch for the story, and to declare that the woman was his wife. (There were probably lies on both sides.)

of strenuous antagonism to Philip, was not justified in the construction which he placed on the part taken by Æschines in opposition to that policy. Indeed, an impartial historian can hardly avoid going further than this: for Demosthenes' distortion of the truth at many points in his argument (intended, as it was, to conceal his own part in making the Peace), and above all the shameless use which he made of the calamities of the Phocians—calamities which he had done nothing to prevent, whereas his opponent had at least attempted to mitigate them; but which he nevertheless set forth in tones of the deepest pathos and indignation—must remain a blot upon his character as a man and an orator, which the worthiness of his political aims and the nobility of much of his subsequent career cannot wholly wipe out.

The effect of the verdict upon the current of political life at the time is hard to estimate. Probably in view of the narrowness of the majority, it was that of a drawn battle, damaging to both parties; but it is impossible, upon the evidence before us, to judge whether the party of Æschines benefited more by his acquittal than Demosthenes gained by having so nearly secured a victory. It is certain that from this time onwards Demosthenes' influence grew steadily: it was he and his supporters who practically guided the action of the city for the next five years; and this can only mean that, whatever reasons the jury had for acquitting Æschines of corruption, the sympathies

of the People were with the main principles of Demosthenes' policy.

An incident which probably occurred soon after the trial¹ of Æschines illustrates the exacerbation of feeling between the two orators. A certain Antiphon, who had been struck off the roll of citizens in a revision of the list which had taken place in 346, was found by Demosthenes concealed in the Peiræus, whither Demosthenes said he had come under a promise to Philip that he would burn the dockyards. (We do not know what evidence Demosthenes had of this; but, in view of Philip's evident desire to avoid a quarrel with Athens at this time, the story seems most unlikely.) Demosthenes arrested him and brought him before the Assembly; Æschines protested that the conduct of Demosthenes in arresting the man without authority was unconstitutional, and induced the Assembly to let him go. Demosthenes, however, informed the Council of Areopagus; and through their action, Antiphon was re-arrested, tried, tortured, and executed. "And so," adds Demosthenes, "ought you to have treated Æschines." Plutarch, who alludes to the story, speaks of Demosthenes' action as "very aristocratic"; and it can hardly be defended.

In the latter half of the year 343, Philip, while

¹ The date is not stated; but the incident is not mentioned in either of the speeches at the trial of Æschines. The only account of it is in Dem., *de Cor.*, §§ 132-134.

studiously avoiding any breach of the Peace with Athens, was extending his influence in many directions; and the Athenians took some steps to neutralise, if possible, the effect of his movements. In Epirus Philip took up the cause of Alexander, brother of his wife Olympias, against Arybbas (Alexander's uncle and former guardian), whom he compelled to surrender the Molossian kingdom to Alexander. He also increased the extent of that kingdom by bringing within it the district of Cassopia (in the south-west corner of Epirus), with its three towns, Pandosia, Boucheta, and Elateia¹; and he proposed further to add to it Ambracia, and the island of Leucas, both colonies of Corinth. The Athenians thereupon sent embassies, in which Demosthenes, Hegesippus, and Polyeuctus² took part, to the Peloponnesian States, with the object of arousing feeling against Philip. It was perhaps in consequence of this that the Corinthians, whose colonies were menaced, applied to Athens for aid. The appeal was favourably received. The Athenians sent troops to Acarnania to defend Ambracia, and resolved, if an opportunity offered, to take up the cause of Arybbas, who, on seeking refuge in Athens, had been welcomed with honour and granted the citizenship.³ The alliance of Athens was also

¹ Or Elatreia.

² And perhaps also Cleitomachus and Lycurgus.

³ Justin, VIII, vi.; Diod., XVI, lxxii.; Dem., in *Olympiod.*, §§ 24-6; Phil. III, §§ 34, 72; *C. I. A.*, ii., 115. On the date see Beloch, *Gr. Gesch.*, ii., p. 543 n.

sought by the Achæans, whose colony at Naupactus on the Ætolian coast had been promised by Philip to the Ætolians, in order to gain the good-will of the latter. But, being still desirous of avoiding hostilities with Athens, Philip did not at present proceed further against either Ambracia or Naupactus, but returned to Macedonia through Thessaly. Here also the emissaries of Athens had been busy, attempting to undermine the loyalty of Philip's Thessalian and Magnesians subjects¹; and it was perhaps for this reason that he now left Macedonian garrisons in Nicæa (which in 346 had been entrusted to Thessalian soldiers), and in Echinus, a Theban colony, but situated on the borders of the Thessalian territory on the north coast of the Maliac Gulf.²

At about the same time Philip's troops were engaged in Eubœa, and his agents in the Peloponnese. His adherents in Eretria had brought about the overthrow of the democracy in that town, and the establishment of an oligarchy, at the head of which stood Cleitarchus. The democrats took refuge in Porthmus, the port of Eretria, and were there besieged by Philip's soldiers. Shortly afterwards (perhaps early in 342) we find the Macedonian general Parmenio supporting Philistides, who headed a similar revolution in Oreus, and was similarly established as "tyrant." These events, though in no way a breach of the

¹ Schol. on Æsch., in *Ctes.*, § 83.

² Dem., Phil. III., § 34 and "Reply to Philip's Letter," § 4.

Peace, were undoubtedly grave disasters for Athens. Oreus would be a valuable base of operations for Philip against Sciathus, Peparethus, and the other islands of that group. Eretria became, by the change, a "fortress overlooking Attica." Moreover, the revolutions had been carried out with some cruelty, and Demosthenes describes in eloquent and pathetic language the fate of Euphræus, the democratic leader in Oreus, who had dared to expose and denounce the intrigues of Philistides and his friends.¹ The government of the "tyrants" thus established was, according to Demosthenes, cruel and despotic.

A noble recompense did the people in Oreus receive, for entrusting themselves to Philip's friends, and thrusting Euphræus aside! and a noble recompense the democracy of Eretria, for driving away your envoys and surrendering to Cleitarchus! They are slaves, scourged and butchered!²

Philip appears to have attempted to effect a similar revolution in Geræstus.³ The people of Chalcis, however, under the leadership of Callias and Taurosthenes, made overtures to Athens. Callias had formerly been on good terms with Philip and had spent some time in his company, but had in some way offended him; he had also been friendly with the Thebans, but now (in order to protect himself against Philip's friends,

¹ Dem., Phil. III, §§ 59 ff.; comp. *de Chers.*, §§ 18, 36.

² Dem., Phil. III, §§ 65, 66.

³ Dem., *de F. L.*, § 326.

Cleitarchus and Philistides) came over to the Athenian side.¹ It was probably about this time that Demosthenes and Callias began those communications which ended in the alliance of 341; and that (on Demosthenes' advice) a corps of soldiers under Chares was stationed in Thasos, to protect the islands.²

In the Peloponnesian States also Philip's friends were active. In 343 (before the trial of Æschines) two of Philip's adherents in Megara, Perillus and Ptœodorus, attempted a *coup d'état* with the aid of a mercenary force sent by Philip: but Phocion marched rapidly to the aid of the Athenian party with a force of Athenian soldiers, fortified Nisæa, the harbour of Megara, and connected it by long walls with the town³; while Demosthenes negotiated an alliance between Athens and Megara.⁴ In Elis Philip's party got the upper hand, and terrible massacres occurred. Among those slain were the remnant of Phalæcus' mercenary force, which (after taking part in some fighting in Crete) had been hired by exiles from Elis to assist them against the Macedonian party and its allies, the Arcadians.⁵ These movements in the Peloponnese could not fail to make a great impression upon the Athenian People, as they did

¹ See Æsch., *in Ctes.*, § 86 ff.

³ Dem., *de F. L.*, §§ 204, 295 ff., 326; *de Cor.*, § 71; Phil. III, § 27; Plut., *Phoc.*, xv. (Plutarch gives no date for Phocion's expedition, but this must almost certainly be the occasion).

⁴ Dem., *de Cor.*, §§ 234, 237; Phil. III, § 74.

⁵ Diod., XVI, lxi.iii.; Dem., *de F. L.*, § 260, etc.¹

upon Demosthenes; it appears that in the year 343-2 the alliance between Athens and the Messenians was renewed¹; and these events doubtless prepared the way by their effect upon Athenian public opinion for the alliance against Philip in 341, in which many Peloponnesian peoples joined.²

Early in 342 Philip went once more to Thrace, leaving the young Alexander to govern in Macedonia in his absence. His object was, in all probability, not merely to complete his conquest of Thrace itself, where Cersobleptes was once more active, but also to obtain control over the route by which the Athenian corn-supply passed, and therewith the power to force Athens to come to terms, if force proved necessary. If, as is likely, the design of the conquest of Asia Minor was already present to his mind, it would be essential to make sure of his ground on the nearer side of the Hellespont, before embarking upon an eastern campaign.

It was as important for Athens, if she desired to retain her independence, to keep the great corn-route open, as it was to Philip to obtain the power to close it. Athens had, in fact, only two alternatives. She might make an agreement with Philip, to be sincerely kept by her as well as by him, and arrange a precise delimitation of territories and spheres of influence. If she chose that alter-

¹ *C. I. A.*, iv., 2, 114 b; comp. *Vit. X Orat.*, 851a.

² Note 5.

native, the two powers could live in peace side by side (Athens retaining the Chersonese) and could fight side by side in the great campaign in the East which Isocrates had advocated. Or, if she would not do this, she might go to war with him, at the head of as many of the Greek States as would follow her lead. There were difficulties in connection with both alternatives. A power in alliance with Philip could never hope to be the predominant partner, and Athenian pride was not ready to take the second place. Besides this, there was a natural and genuine disbelief in the likelihood of the honest observance of any treaty by Philip; for though his attitude towards Athens throughout the last few years had not only been formally correct, but even forbearing, his past history had not been such as to inspire confidence, and even now he was spreading his net all round Attica, so that it seemed likely that before long she would be entirely isolated. Nor was there any sure guarantee, whatever agreement might be made with Philip, that the hostile neighbours of Athens would remain at peace with her. On the other hand, the disunion of the Greek States made it uncertain whether Athens would find any following against Philip that would be of much real advantage to her; and although Philip was not likely to be able to cut her off from the sea, there was no land-force which could be relied upon to hold him in check and prevent the ravaging of Attica. Moreover, the disinclination of the People

for the sacrifices entailed by war was as great as ever, however much their pride might rebel at the idea of Philip's ascendancy.

But Demosthenes' choice had long been made: and the People, though not yet brought to the point at which they would take strong measures at any sacrifice, were disposed to follow his lead; and though he could not yet propose the one measure in which hope lay, an alliance with Thebes (since neither they nor the Thebans were yet ready for this), he took steps during the next few years to drive Philip to such hostile action as would convince the People that they must fight, if they were to remain true to that passion for autonomy and leadership which was one of the dominant elements in their national character. There can be little doubt that Demosthenes interpreted the collective feeling of the mass of his fellow-countrymen rightly; and his efforts were now all directed to forcing them to translate their feeling, which was apt to show itself only in spasmodic outbursts, into steady action, undertaken after thorough preparation.

Philip's campaign in Thrace was completely successful, though few details are known to us. He conquered the whole territory of the princes Cersobleptes and Teres. The latter, who died in the course of the war, had been given the citizenship of Athens (though he had joined Philip in his earlier campaign); and the Athenians had vainly sent protests to Philip, requesting him to allow

these princes to retain their kingdom, as allies of Athens. Philip made the perfectly correct reply that these princes had not participated in the Peace of 346, and that he was under no obligation to recognise them as allies.¹ The dominions thus definitely added to his kingdom Philip proceeded to secure by the foundation of military colonies, of which the chief were Calybe (or Cabyle) and Philippopolis (on the upper waters of the Hebrus), the former being nicknamed Poneropolis—"Rogueborough"—on account of the alleged character of the settlers planted there.² He strengthened his position on the northern frontier of Thrace by his friendly reception of Cothelas, King of the Getæ, who lived between the Hebrus and the Danube; and (since his principles did not force monogamy upon him) he married Cothelas' daughter.³ He also made alliance with the Greek colony of Apollonia on the Black Sea, and probably with Odessus (Varna) and other smaller Greek settlements on the same coast.⁴ Ænos at the mouth of the Hebrus, the last ally of Athens in Thrace, deserted her for Philip in 341.⁵ In the course of his campaign Philip captured a number

⁵ Dem., *in Theocr.*, § 37.

of strongholds, of which Drongilus and Masteira are particularly named, though their positions are not certainly known¹; and he passed the winter of 342-1 in Thrace, enduring great hardships with his army.

The Athenian commander in the Chersonese in 342 was Diopeithes of Sunium. Either in that year, or shortly before, the Athenians had sent a fresh body of settlers to the Chersonese, and these were generally well received by the towns in the peninsula. But Cardia, which claimed to be the ally, not of Athens, but of Philip, naturally refused to admit them. Diopeithes was instructed to look after the interests of the settlers, and raised a body of mercenaries, for whom he provided pay by acts of piracy against the trading ships of smaller islands and maritime towns, or by exacting contributions from them, under the name of "benevolences," in return for which their ships were safely escorted by his squadron. (In acting thus, Demosthenes says, Diopeithes was following the regular practice of Athenian commanders.²) When he began to threaten the Cardians, the latter appealed to Philip for support, and a Macedonian garrison was sent to protect the town. Diopeithes now went further, and committed a direct act of hostility against Philip's dominions. For, while Philip was fighting in the interior of Thrace, Diopeithes made a raid into Thracian

¹ Dem., *de Chers.*, § 44, etc.

² *De Chers.*, §§ 24 ff.

territory and plundered the country about Crobyle and Tiristasis, which lay near the entrance to the Chersonese from the side of the Propontis; and when Philip sent an envoy named Amphilochus to negotiate for the return of prisoners, Diopeithes seized him, and would not let him go until he had paid a ransom of nine talents.¹

Philip had already offered to submit to arbitration in regard to Cardia, and he now (early in 341) despatched a strong protest to Athens, declaring that he would take active measures to protect the Cardians.² The matter was discussed at a meeting of the Assembly, and we learn from Demosthenes' speech on that occasion all that we know of the debate. The peace-party attacked Diopeithes on account of his irregular and piratical actions, which, they declared, were bound to end in war with Philip; and they evidently succeeded in rousing considerable feeling against the commander. They laid great stress on the blessings of peace, and accused the anti-Macedonian politicians of designs upon the public funds—in other words, upon the festival-money. Demosthenes admitted (for the sake of argument) the unjustifiability of Diopeithes' actions, though he spoke of them under the name of "assistance to the Thracians"; but he insisted that when Philip was advancing his dominion in a manner most perilous to Athenian interests, it was not the time to recall or to attack the commander who was at least do-

¹ *Ep. Phil.*, § 3.

² *De Chers.*, § 16.

ing something to maintain the Athenian cause—still less to send another commander and fleet to bring him back, or keep guard over him, as his opponents had proposed. To interfere with him now would be to do the very thing that Philip would wish. He further urged the seriousness of the danger lest Philip should advance to Byzantium while the Etesian winds were blowing; for then Athens could do nothing to hinder him, unless she had a strong force in the Chersonese. As to the risk of war with Philip, he replied that it was only the misleading influence of Philip's party that prevented the Athenians from seeing that Philip, whatever professions he might make, was already at war with them. In an impressive passage¹ he imagines the other Hellenes interrogating the Athenians as to their policy:

“Is it true, men of Athens, that you send envoys on every possible occasion, to tell us of Philip's designs against ourselves and all the Hellenes, and of the duty of keeping guard against the man, and to warn us in every way?” We should have to confess that it was true. “Then,” they would proceed, “is it true, you most contemptible of all men, that though the man has been away for ten months, and has been cut off from every possibility of returning home, by illness and by winter and by wars, you have neither liberated Eubœa nor recovered any of your own possessions? Is it true that you have remained at home, unoccupied and healthy—if such a word can be used of men who

¹ §§ 35-7.

behave thus—and have seen him set up two tyrants in Eubœa, one to serve as a fortress directly menacing Attica, the other to watch Sciathus; and that you have not even rid yourselves of these dangers—granted that you did not want to do anything more—but have let them be? Obviously you have retired in his favour, and have made it evident that if he dies ten times over, you will not make any move the more. Why trouble us then with your embassies and your accusations?" If they speak thus to us, what will be our answer? I do not see what we can say.

He then defines what he regards as the proper attitude for Athens to adopt¹:

First, men of Athens, you must thoroughly make up your minds to the fact that Philip is at war with Athens, and has broken the Peace—you must cease to lay the blame at one another's doors—and that he is evilly-disposed and hostile to the whole city, down to the very ground on which it is built. . . . But his hostilities and intrigues are aimed at nothing so much as at our constitution. . . . For he knows very well that even if he becomes master of all the world, he can retain nothing securely, so long as you are a democracy; and that if he chances to stumble anywhere, as may often happen to a man, all the elements which are now forced into union with him will come and take refuge with you. . . . And so he would not have Freedom, from her home in Athens, watching for every opportunity he may offer. . . . Secondly, you must realise clearly that all the plans which he is now so busily contriving are in the nature

¹ § 39 ff.

of preparations against this country; and wherever any one resists him, there he resists him on our behalf. For surely no one is so simple as to imagine that when Philip is so covetous of the wretched hamlets of Thrace, and when to get these places he is enduring heavy labours, and the extremity of danger, the harbours and the dockyards and the ships of the Athenians, the produce of their silver-mines, and their huge revenue have no attraction for him; or that he will leave you in possession of these, while he winters in the very pit of destruction for the sake of the millet and the spelt in the silos of Thrace. No indeed! It is to get these into his power that he pursues both his operations in Thrace and all his other designs.

The only remedy, Demosthenes insisted, lay in the organisation and efficient maintenance of a standing force, to defend the liberties of the Hellenes. He then turned to attack his opponents, and their anxiety to prosecute the orators and generals of the war party, and upbraided the People vehemently for their readiness to listen to them:

Yours is the one city in the world where men are permitted to speak on behalf of the enemy without fear; a man may take bribes, and still address you with impunity, even when you have been robbed of your own. . . . Aye, and you know that of such speakers, some who were poor are rapidly growing rich; and some who were without name or fame are becoming famous and distinguished, while you, on the other hand, are becoming inglorious instead of famous, bankrupt instead of wealthy. For a city's

wealth consists, I imagine, in allies, confidence, loyalty—and of all these you are bankrupt.¹

After defending himself against the charge, which his opponents had brought against him, of lacking the courage of his opinions, and of abstaining from formally moving the measures which he recommended, he concluded with a proposal that Diopeithes' force should be maintained, and envoys sent in all directions to organise the movement against Philip.

Above all [he added], we must punish those who take bribes in connection with public affairs, and must everywhere display our abhorrence of them; in order that reasonable men, who offer their honest services, may find their policy justified in their own eyes and in those of others. If you treat the situation thus, and cease to ignore it altogether, there is a chance—a chance, I say, even now—that it may improve. If, however, you sit idle, with an interest that stops short at applause and acclamation, and retires into the background when any action is required, I can imagine no oratory, which, without action on your part, will be able to save your country.

The Speech glows with an enthusiasm which is obviously genuine, and was in every way calculated to commend to the People the policy which the speaker believed to be the only one consistent with the interest and honour of Athens. In fact, matters had now gone so far that war was practi-

¹ § 64 ff.

cally inevitable, and whether or not Demosthenes was to be blamed for having done his best to produce such a state of things, there could be no doubt of his duty when once it was brought about. Accordingly in this Speech and in the Third Philippic the tone of authority is more strongly marked than in most of his earlier orations; though he is still conscious of the strength of the opposition, and of the danger to himself which his policy involved.

We do not know whether the Speech on the Chersonese had any immediate result, beyond its effect on public opinion, though it is certain that Diopeithes was not recalled. It is also certain that within two or three months of the date of the Speech, the feeling of the Athenians had become much more positively militant, and the outbreak of war in Thrace much more imminent. It was in a debate upon a renewed application for supplies from the army in the Chersonese that the Third Philippic was delivered. In this Demosthenes' policy is even more fully declared. It was not now, he insisted, in any selfish interest of her own, but as the champion of the Hellenes against the enemy of their freedom, that the Athenians must take the field. He again declared that Philip was not only at war with Athens, but was obtaining all the advantages of an unopposed conqueror at her expense: and Philip could not be expected to make a formal declaration of war, when it was much more to his purpose to cause the Athenians to take

no steps against him, on the ground of the existence of the Peace. He next traced rapidly and forcibly the growth of Philip's power until his influence had extended itself not only over Thessaly, but over Eubœa, Megara, Elis, and western Greece.

But [he continued¹], though all of us, the Hellenes, see and hear these things, we send no representatives to one another to discuss the matter; we show no indignation; we are in so evil a mood, so deep have the lines been cut that sever city from city, that up to this day we are unable to act as either our interest or our duty require. We cannot unite; we can form no combination for mutual support or friendship, but we look on while the man grows greater, because every one has made up his mind (as it seems to me) to profit by the time during which his neighbour is being ruined, and no one cares or acts for the safety of the Hellenes. For we all know that Philip is like the recurrence or the attack of a fever or other illness, in his descent upon those who fancy themselves for the present well out of his reach. . . . What [he asks¹] is the cause of these things? For as it was not without reason and just cause that the Hellenes in old days were so prompt for freedom, so it is not without reason or cause that they are now so prompt to be slaves. There was a spirit, men of Athens, a spirit in the minds of the People in those days, which is absent to-day—the spirit which vanquished the wealth of Persia, which led Hellas in the path of freedom, and never gave way in face of battle by sea or land; a spirit whose extinction to-day has brought universal

¹ §§ 28, 29.

¹ § 36 ff.

ruin and turned Hellas upside down. What was this spirit? It was nothing subtle or clever. It meant that men who took money from those who aimed at dominion or at the ruin of Hellas were execrated by all; that it was then a very grave thing to be convicted of bribery; that the punishment of the guilty man was the heaviest that could be inflicted, that for him there could be no plea for mercy, nor hope of pardon. No orator, no general, would then sell the critical opportunity whenever it arose—the opportunity so often offered to men by fortune, even when they are careless and their foes are on their guard. They did not barter away the harmony between people and people, nor their own mistrust of the tyrant and the foreigner, nor any of these high sentiments. Where are such sentiments now? They have been sold in the market and are gone; and those have been imported in their stead through which the nation lies ruined and plague-stricken—the envy of the man who has received his hire; the amusement which accompanies his avowal; the pardon granted to those whose guilt is proved; the hatred of one who censures the crime; and all the appurtenances of corruption. For as to ships, numerical strength, unstinting abundance of funds and all other material of war, and all the things by which the strength of cities is estimated, every people can command those in greater plenty and on a larger scale by far than in old days. But all those resources are rendered unserviceable, ineffectual, unprofitable, by those who traffic in them.

At the same time, Demosthenes was under no delusion as to Philip's power. Athens, in spite

of her recovery from the impoverished condition in which she found herself some years before, was not yet strong enough to risk a pitched battle on land against Philip's modernised army. Her policy was rather to hold him in check by perpetual operations, forming part of a lengthy campaign, and so to conduct operations at a distance that he might be unable to draw nearer to Attica. In the latter part of the Speech, he returned to the attack upon his opponents, and upon the People for their apathy in regard to his opponents' disloyalty¹; and cited instance after instance to show the disasters brought about by Philip's friends—in Olynthus, in Oreus, in Eretria. Finally he moved that preparations for war should at once be begun, and that envoys should be sent to the Peloponnesian States, to Chios and Rhodes, and to the King of Persia himself (whose interests in regard to Philip were the same as those of Athens), to organise the world against Philip. No one would do this, he declared, if Athens did not. "The task is yours. It is the prerogative that your fathers won, and through many a great peril bequeathed to you."

A mere summary of this great Speech, and a few quotations, can give but a poor impression of its power. It is a stronger proof of it, that the policy advocated in it was instantly adopted. Reinforcements and money were sent to Diopceithes; within a month or two at most Chares also was

¹ See Ch. III., p. 82.

in the Chersonese,¹ and Athenian garrisons were placed in Proconnesus and Tenedos.² The exertions made by Athens were such as, a short time before, no one would have believed her capable of making. Her envoys went in all directions. Demosthenes himself travelled to Byzantium: by his efforts the old alliance between Byzantium and Athens was renewed; grudges on both sides were forgotten; and the key of the Black Sea was thus once more in friendly hands. (At a later date Demosthenes recalled³ with some pride that, in consequence of this, Athens was kept supplied during the war which followed with the necessities of life in greater plenty than during the years of peace in Alexander's reign.) From Byzantium he passed to Abydos, and succeeded in transforming its long-standing ill-feeling against Athens into friendship.⁴ He also renewed friendly relations with the Thracian princes, though whether with those who had already been conquered by Philip, or with others, who may have retained a nominal independence, we do not know.⁵ It may have been on the same tour that he went to Illyria, since he couples the Illyrians with the Thracian princes in the enumeration of those with whom he had negotiated. Hypereides travelled to Rhodes, and probably to Chios also, and secured their alliance.⁶ Messengers were also perhaps sent to

⁴ *Ibid.*, § 302.

⁶ *Vit. X Orat.*, 850a.

the King of Persia; and he certainly sent money to Diopieithes.¹

It is, however, possible that the embassy to Persia was not sent at once. We hear,² it is true, of a certain Ephialtes who was sent to the King when Philip was besieging Byzantium, and who secretly brought back large sums of money from the King to induce the popular leaders in Athens to commence war. Demosthenes, it is said, received three thousand darics, and Hypereides also shared in the distribution. It is impossible to test the truth of this story, or to decide whether Ephialtes was sent as the result of Demosthenes' advice. But it is at least probable that the People did not immediately overcome their repugnance to a step so contrary to their traditions and inclinations as the appeal for help to the King; and if the Fourth Philippic is (as some suppose) a pamphlet issued by Demosthenes himself somewhat later than the delivery of the Third Philippic, it shows that the suggestion of an embassy to the King needed to be reinforced by further argument than he had given to the point in that Speech. There is, however, no evidence to show that (as some modern critics surmise) the action of the Athenians in seeking alliance with the King alien-

¹ Ar., *Rhet.*, II, viii., p. 1386a 13. The reply of the King to the Athenians quoted by Æsch., in *Ctes.*, § 235, cannot, as is generally stated, refer to this occasion, but must belong to the year 335, since it was given "shortly before Alexander crossed into Asia."

² *Vit. X Orat.*, 847f., 848c. The authority is not very reliable.

ated from them the sympathies of the other Greeks. Thebes and Sparta at any rate could not throw stones at them, and many of the other States shortly afterwards joined in league with Athens. And though there is no doubt a formal inconsistency between Demosthenes' strong expressions in reference to the great traditions of Athens as the champion of the Greeks against Persia, and his advocacy of a Persian alliance against Philip, the latter policy was dictated by higher reasons than considerations of mere consistency. Indeed, to use the help of Persia to secure the freedom of Greece was scarcely even inconsistent with the principle underlying the traditional attitude of Athens, and was certainly no treason. The assertion that Demosthenes himself received money from the King occurs first in a very late and not always reliable authority, and may be false; but even if it is true, it is a gross exaggeration to state, as some modern historians do,¹ that from this time onwards Demosthenes was the chief agent of Persia in Greece. His later relations with Persia will be considered in their place.

It was not only by embassies that Demosthenes prepared for the struggle. On his proposal a definite alliance was made in the summer of 341 with Chalcis in Eubœa; and the envoys sent to deprecate this by Cleitarchus and Philistides failed to obtain a favourable hearing at Athens.²

¹ Ed. Meyer, *Isokrates' zweiter Brief*, p. 778.

² Dem., *de Cor.*, § 82.

Before July was over the Athenian general Cephisophon had expelled Philistides from Oreus, and in the following month Cephisophon was succeeded by Phocion, who besieged Eretria, drove out Cleitarchus, and (as had been done in Oreus) restored the democracy.¹ In conjunction with Callias of Chalcis Demosthenes now proceeded to organise a league against Philip, and the Athenians about the same time conferred the citizenship of Athens upon Callias and his brother Taurosthenes. Callias and Demosthenes went to the Peloponnese and obtained promises of large sums of money and considerable contingents of soldiers from Corinth and Megara, and from the Achæans. (The Spartans, and, as was natural, the Peloponnesian States in which Philip had influence, stood aloof.) Demosthenes also travelled to Acarnania, and received the adhesion, not only of the Acarnanians, but of Ambracia, Leucas, and Corcyra as well. Callias appeared before the Assembly in person, probably in January or February, 340, and reported the results of his tour; and (according to Æschines' account) spoke of further advantages gained, which must at present be kept secret. Demosthenes confirmed this hint, and reported the promises which he had himself received. He further stated that arrangements had been made for a congress at Athens, to be held in a very short time, on the 14th of Anthesterion (March 7th), 340. The congress was probably held, since

¹ Didym., *schol. in Dem.*, Col. i.; Diod., XVI, lxxiv.

Plutarch¹ records the reply made by Hegesippus to the new allies, who desired their rates of contribution to be settled, that "war cannot be put upon rations"; and although Æschines² describes the announcements made by Demosthenes as a conspicuous illustration of Demosthenes' skill in making his falsehoods detailed and circumstantial, there is no reason to doubt that the promises were really given; for most of the States named did in fact give help to Athens in the campaigns of 339 and 338. Demosthenes claimed³ that from these sources there came, besides citizen-troops, fifteen thousand mercenaries and two thousand cavalry.

In dealing with the Eubœans, as afterwards in making alliance with Thebes, Demosthenes sought to render the friendship stable by offering generous terms to the new allies. Instead of requiring the Eubœan States to contribute to the Athenian League, he persuaded the Assembly to permit—by a decree, Æschines says, "longer than the *Iliad*"—the formation of a separate Eubœan confederacy, and to authorise the peoples of Oreus and Eretria to contribute their funds to Callias instead of to the treasury of the Athenian allies. There can be little doubt that this was a wise as well as a generous step. It was well worth some sacrifice to establish a united Eubœa, and to convert the island, which Philip might have made his base of operations against Athens, into a

¹ Plut., *Dem.*, xvii.

² *In Ctes.*, § 99.

³ *De Cor.*, § 237.

barrier against him.¹ Æschines, however, eleven years later,² attacked Demosthenes fiercely, for thus depriving the Athenians of the contributions from Eubœa, and rendering Eubœa independent of Athens, except for the futile provision that the citizens of Chalcis should come to the aid of Athens if she were attacked. He further alleged that Demosthenes had been bribed to do this by the gift of a talent apiece from Chalcis, Eretria, and Oreus; and described how the people of Oreus vainly tried to persuade Demosthenes to let them off this payment, promising to erect a statue to him; and how in the end they were obliged to mortgage their public revenues to him, until the talent was repaid with interest. In the story as told by Æschines there are some very improbable statements,³ and the whole tale may be fictitious, even though Hypereides and Deinarchus also allege that Demosthenes made money out of the negotiations with Callias; for when the morality of Greek statesmen generally was such as it appears to have been at this period, it was a matter of course that any statesman who gave advantageous terms to another State would be accused of having done so for a bribe.⁴

However this may be, Callias proved himself

¹ *De Cor.*, § 301; cf. § 237 ff.

² *In Ctes.*, §§ 103-105.

³ Such as that Cleitarchus, the expelled tyrant of Eretria, as well as the son of a former tyrant of Oreus, took part in the transaction.

⁴ On the date of the Eubœan alliance, see Reichenbächer, *Die Gesch. der athenischen u. makedonischen Politik*, pp. 30-34.

an active partner; for, with ships lent to him by Athens, he attacked the towns on the Gulf of Pagasæ and took them all; and seizing any merchant-vessels that were sailing to Macedonia, sold those on board as slaves. The Athenians passed a vote of thanks to him for these achievements, which, in the spirit if not in the letter, involved a distinct breach of the Peace of Philocrates.¹ About the same time (probably late in 341 or early in 340) acts of direct hostility were committed. The islanders of Peparethus (who belonged to the Athenian alliance) seized Halonnesus and expelled Philip's soldiers, who had occupied it since the expulsion of the pirates; and when in return Philip's ships made a raid upon Peparethus, the Athenian admirals were ordered to make reprisals.² Besides this, a Macedonian herald named Nicias, carrying despatches, was seized on Macedonian territory by the Athenians, and kept in prison for ten months; and the despatches were publicly read in the Assembly.³ The Athenian forces stationed in Thasos offered a refuge to pirate ships, despite the clause in the treaty with Philip by which both parties bound themselves to suppress piracy.⁴ At Athens itself, Demosthenes caused the arrest of Anaxinus of Oreus, whom he alleged to be a spy in Philip's interest, though

¹ *Ep. Phil.*, § 5. It may be that technically the acts of Callias, even when he had borrowed ships from Athens, could not constitute a breach of the Peace by Athens.

² *Ibid.*, §§ 12-15.

³ *Ibid.*, § 2.

⁴ *Ibid.*

Æschines declares that he had come to Athens to make purchases for Philip's wife, Olympias; and, on Demosthenes' motion, Anaxinus was tortured and executed, despite the fact that he had once been Demosthenes' host at Oreus¹—an unpleasant incident, but very significant of the strength of the prevalent feeling against Philip. At the Dionysia in March, 340, on the proposal of Aristonicus, Demosthenes was crowned with a wreath of gold before the assembled People, for his services to the city.²

In the meanwhile Philip had not been idle in Thrace. Before the end of 341 the whole country was in his power; and it became plain that (as Demosthenes had foreseen) the turn of his former allies, Byzantium and Perinthus, must shortly come. The Byzantines, as has already been narrated, had now made alliance with Athens, and when Philip called upon them to join in resisting the Athenians in the Chersonese, they replied that such action could not be required of them under the terms of their treaty with him.³ About the end of July, 340,⁴ his ships sailed up the Hel-

¹ Perhaps during the delay at Oreus on the Second Embassy. Demosthenes taunts Æschines with receiving Anaxinus, as well as the envoys of Cleitarchus and Philistides on a former occasion; but Æschines as Consul of Oreus at Athens would be bound to do this; see Dem., *de Cor.*, §§ 82, 137; Æsch., *in Ctes.*, § 224.

² Dem., *de Cor.*, § 83.

³ *Ibid.*, § 8.7

⁴ Philochorus, fr. 135; for the date see Kromayer, *Antike Schlachtfelder*, i., p. 178.

lespont; but the Athenian commander in the Chersonese showed such hostility, that Philip, to protect his ships, marched his army alongside of them through the Chersonese, while the Athenian commanders invoked the assistance of the Byzantines. (The opposition of the Athenians to the passage of Philip's ships had been enjoined upon them by a decree proposed in the Assembly by Polycrates, and was thus an act of open war.¹)

Philip now laid siege to Perinthus with the aid of all the devices that he and his engineer Polyeidus could contrive. The inhabitants made a magnificent resistance, but would probably have been forced to surrender, had not the Persian King ordered his satraps to render them all possible assistance. In consequence of this order, a large body of mercenaries crossed from Asia Minor, under the command of the Athenian Apollodorus and Aristomedes of Pheræ.² The Byzantines also helped the Perinthians both with men and supplies; and the resistance was so successful that Philip suddenly departed, leaving only part of his forces before the walls, and laid siege to Byzantium itself.

It was about this time (in the autumn of 340) that there occurred the event which led to the actual declaration of war between Athens and Philip. The Athenian merchant fleet had collected

¹ *Ep. Phil.*, § 16.

² Diod., XVI, lxxv.; Paus., I, xxix., § 7; "Reply to Philip's Letter," § 5.

at Hieron¹ (an island belonging to Chalcedon and situated near the Asiatic coast, at the entry of the Bosphorus), in order that Chares might thence escort them safely homewards with his war-ships. But during the temporary absence of Chares at a conference with the commanders of the Persian force, Philip succeeded in getting possession of the merchant-ships, to the number of 230, and not only took from them seven hundred talents in money and the cargoes of corn and hides which he found there, but also used the timber of the vessels themselves for his siege-works.² The Athenians appear to have sent a protest to Philip, and in reply he despatched a letter (of which the substance is probably contained in the "Letter of Philip" included among the orations of Demosthenes) enumerating the acts of hostility which the Athenians had committed against him since 346, denouncing the orators of the war-party, and declaring his intention of retaliating.³ In reply, on the advice of Demosthenes (though possibly the formal motion was not moved by him)⁴, it was resolved to remove the column on which the treaty of peace and

¹ Its name was due to its containing a temple of Zeus Ourios. See Arrian, *Peripl.*, §§ 12, 25; Boeckh. on C. I. G., ii., 3797; Weil on Dem. in *Lept.*, § 36.

² Didymus, *schol. in Dem.*, Col., x., xi. (quoting Philochorus). The sum of seven hundred talents seems enormous; and it may at least be questioned whether the numeral is not corrupt. See Note 7.

³ See Foucart, *Les Athéniens dans la Chersonèse*, p. 38.

⁴ Dem., *de Cor.*, § 76; comp. Didymus, *l.c.*, and Æsch., in *Ctes.*, § 55.

alliance with Philip was engraved, to man a fresh fleet, and to carry on the war by all possible means.¹

In order to facilitate the execution of this determination, Demosthenes propounded a reform of the trierarchic system, somewhat different in detail from that which he had put forward in 354, but with the same object—that of preventing the rich from evading their responsibilities. Whereas under the existing system rich men had contributed only a fraction of the cost of a single trireme, contributions were now to be graduated in strict proportion to property; and so “a man came to be charged with two warships, who had previously been one of sixteen subscribers to a single one.”² It is for this strict apportionment of liability to property that Demosthenes afterwards claimed special credit. The wealthier citizens vainly attempted, he tells us, to divert him from his purpose by the offer of huge bribes, and to hinder the passage of the law by prosecuting him for its alleged illegality; the prosecutor did not obtain a fifth part of the votes of the jury, and so himself incurred a fine. Æschines of course opposed the law vigorously, but it was carried, and so successful was its operation that throughout the war with Philip not a complaint was raised against it; there were no cases of default; the work of equipment was properly done; and no ship was left at home as unseaworthy, or abandoned at sea.³ Demos-

¹ Philochorus, *ap.* Dion. Hal., *ad Amm.*, i., x.

² Dem., *de Cor.*, § 104.

³ *Ibid.*, §§ 102–109.

thenes himself was appointed overseer of the fleet,¹ and thus himself supervised the execution of his law. At some time or other after the passage of the law, modifications appear to have been introduced into it, probably in consequence of a renewed attack by Æschines; but there can be little doubt that, for the time, Demosthenes had his own way.²

Philip had doubtless expected to surprise Byzantium while its defenders were assisting the Perinthians. In this he failed; but he laid siege to the city with vigour, and did not relax his efforts throughout the winter. The Athenians ordered Chares, with forty ships, to attempt to relieve the beleaguered city; but the inhabitants mistrusted him (perhaps with good reason) and would not admit him to the city.³ At first the Athenians were inclined to resent this; but Phocion declared that the fault lay more with the general than with the Byzantines; and he was thereupon himself sent out (with Cephisophon) in place of Chares, late in 340 or early in 339.⁴ Demosthenes and Hypereides were among those who voluntarily furnished ships for the war.⁵ Phocion was warmly welcomed by the besieged, and conducted the defence of the city in conjunction with Leon, a Byzantine who had been his friend when both were pupils of Plato in the Academy. His ships

¹ This was probably an extraordinary office, created for the occasion. ² Note 8. ³ Note 9. ⁴ *C. I. A.*, ii., 809.

⁵ *C. I. A.*, ii., 808, 809; *Vit. X Orat.*, 848f, 851a.

also protected the Athenian corn-convoy.¹ The peoples of Perinthus and Byzantium passed resolutions of gratitude to Athens in glowing terms, and sent crowns to her, as did also the colonists in the Chersonese; and Demosthenes afterwards claimed to be the only statesman for whose deserts the city had received a crown.² The Byzantines were also assisted by ships from Chios, Rhodes, and Cos—once their allies against Athens, and now (perhaps owing to anxiety for the safety of their own commerce) allies of Athens itself once more; a Persian force crossed once more from Asia to help them³; and in spite of persistent attacks, Philip could not take the town. At last, after a well-planned attempt on a moonlight night, which might have succeeded had not the defenders been roused by the barking of dogs, he resolved to depart (early in the spring of 339).⁴ By concocting a carefully devised letter to Antipater, and contriving that it should fall into the hands of the Athenian commanders, he caused the latter to leave the passage of the Bosphorus open, and so got his ships away from the Black Sea, where they appear to have been confined.⁵ On his way he perhaps plundered the Athenian colonies in the Chersonese, and apparently his fleet passed through the Hellespont without difficulty, probably because, as

¹ Dem., *de Cor.*, § 89.

² *Ibid.*, § 90 ff.

³ Arrian, *Anab.*, II, xiv., § 5.

⁴ For the date, see Kromayer, *Antike Schlachtfelder*, pp. 181, 184.

⁵ Front., I, iv., § 13.

before, he kept the colonists employed on shore; but Phocion afterwards overtook some of his ships, and recovered some of the Thracian coast towns which Philip had taken, making descents upon various points until he was wounded and forced to return home.¹

Philip now took his army off upon a distant expedition against the warlike Scythian King Ateas, who had insulted him in the previous year.² From this raid, which took him as far as the Danube, he carried off a vast number of captives, as well as horses, flocks, and herds³; and his success no doubt refreshed the spirits of his men. But on his way homewards, he passed through the country of the Triballi, a fierce tribe living on Mount Hæmus, and in a sudden attack by the tribesmen he not only lost the booty taken from the Scythians but was himself severely wounded in the thigh.⁴ He succeeded, however, in fighting his way through into Macedonia, where he must have arrived in the spring of 339.

Up to this point the result of the struggle had been favourable to Athens, and Philip's failure to take Byzantium, and his subsequent misfortunes, must have given great encouragement to the Athenians. But some months before Philip's

¹ Justin, IX, i.; Syncellus III, 692; Plut., *Phoc.*, xiv. See Note 10.

² For anecdotes about this King, see Schäfer, ii., p. 519.

³ Justin, IX, ii.; Strabo, p. 307; Æsch., in *Ctes.*, § 128.

⁴ Justin, IX, iii.; Didym., *schol. in Dem.*, Col. 13.

return to Macedonia there had been sown the seeds of new troubles for Athens, and new opportunities for Philip. The nature of these, and the issue of the struggle, will be the subject of the next chapter.

NOTES TO CHAPTER IX

1. On the difficulty in the evidence as to the Thessalian tetrarchies (Dem., Phil. II, § 22, *de Chers.*, § 26, and Harpocr., s. v. *δεκαδρχία*) see the note in my translation of Demosthenes' Public Orations, vol. ii., pp. 166, 167. It is disputed whether the tetrarchies were actually created in 344, or whether Philip at first established a decarchy or Council of Ten, and replaced it by tetrarchies in 343. But I am now inclined to think that the decarchy is a myth, and that there was only one constitutional change.

2. It is not certain whether Artaxerxes had or had not yet effected the reconquest of Egypt at the time of this mission to Athens in 343. See Meyer, *Isokr. zweiter Brief*, p. 777; Kahrstedt, *Forschungen*, pp. 15 ff., and *Klio*, vol. x., p. 508; Lehmann-Haupt in *Klio*, vol. x., pp. 391 ff., and in Gercke and Norden's *Einleitung in die Altertumswissenschaft*, iii., pp. 61, 119; and Cavaignac, *Hist. de l'Antiquité*, p. 401. Kahrstedt gives strong reasons for thinking that Egypt was not subdued until the following winter—that of 343-2. The King may have wanted the Greek States to give him help against Egypt, or at least to facilitate his obtaining Greek soldiers as mercenaries. But he probably had Philip also in his mind. Some think that he first tried to negotiate with Philip himself and obtained a nominal and short-lived alliance; but the passage of Arrian, II, xiv., on which this conjecture is based, probably refers to an earlier period. See above, Chap. VI., p. 191.

3. Comp. Phil. III, § 71, where Demosthenes recommends an embassy to the King (in 341). The proposal is still more strongly argued in Phil. IV, §§ 31-34, where the writer urges that the fact that the King had seized Philip's confidant Hermias proved his interest in the war with Philip, and protests against the application of the names "barbarian" and "public enemy" to the

Great King. Whether the Fourth Philippic was issued by Demosthenes as a pamphlet in the early summer of 341 (as Körte, *Rhein. Mus.*, lx., p. 3, believes), or was compiled from Demosthenic material by Anaximenes for insertion in his history (as Nitsche and Wendland think), it was certainly the work of some one intimately acquainted with the events and position of affairs in the early part of 341 (just after Phil. III.), and can safely be used as an authority.

4. Plutarch himself doubts whether the trial really took place, and whether the speeches were ever delivered, on the inadequate ground that neither orator distinctly refers to the trial in his speech at the trial of Ctesiphon in 330. Why should they? It was not an occasion of which either could be proud; it was a defeat for one, and a very narrow escape for the other, and Æschines, the victor in the contest, had least reason of all to mention it, since he desired his connection with the Peace to be forgotten. The expression used by Dion. Hal. (*ad Amm.*, i., 10) when he says that Demosthenes "composed" this speech, while in other cases he used words distinctly implying delivery, may be purely accidental. That there were some differences between the spoken and the published speech of Demosthenes is certain, and some of the replies to "anticipated objections" of the adversary were probably not written until after the trial.

5. Beloch believes that an alliance against Philip was made in 343-2; but the arguments urged against this view by Reichenbächer, *Die Geschichte der athenischen u. makedonischen Politik*, pp. 30, 31, are very strong.

6. The Letter of Philip, included among the works of Demosthenes, is probably extracted from the History of Anaximenes (see Wendland, *Anaximenes von Lampsakos*, p. 13); but there is no reason to doubt that it accurately represents Philip's point of view, though it cannot be assumed that all the arguments contained in it were embodied in one letter; and it seems safe to use it as an authority. The so-called "Reply to Philip's Letter" is mainly a compilation of passages from works of Demosthenes, probably derived from the same source; but there is no reason to regard it as unreliable as to facts.

7. There is great difficulty as to the ships taken by Philip. The account given in the text is taken from the Scholia of Didymus;

comp. Dem., *de Cor.*, §§ 73 and 139. A quite different account is given in the two decrees and the letter of Philip quoted in Dem., *de Cor.*, §§ 73-77. According to these, twenty Athenian ships, sent under Leodamas to the Hellespont as an escort for corn-ships sailing from the Hellespont to Lemnos, were seized by Philip's admiral Amyntas, and detained, in the belief that they were really going to help Selymbria, which was being besieged by Philip; but upon the representations of envoys sent from Athens, they were restored. The same story is cited (evidently from the documents in the *de Cor.*, *l.c.*) by the scholiast on the "Reply to Philip's Letter." But (1) there is nowhere else any reference to a siege of Selymbria by Philip (Nitsche, *Demosthenes und Anaximenes*, pp. 82 ff., is not at all convincing); and (2) the documents quoted in the text of the *de Cor.* are certainly spurious (see Goodwin's edition, App. VIII.). They do not even go to prove the point which Demosthenes wishes to prove; for the capture of ships immediately afterwards restored can hardly have been the cause of war; and there are sundry mistakes in them. We are therefore probably justified in rejecting the whole story, as Grote does. But if Selymbria really was attacked by Philip, it was doubtless on his way from Perinthus to Byzantium; and if the seizure of Leodamas' ships really took place, it may have been neglected by the Greek historians through a confusion of it with the later seizure of the 230 ships at Hieron.

8. We do not know to what Æschines refers (*in Ctes.*, § 222), when he says that he "convicted Demosthenes of stealing from the State the trierarchs of sixty-five swift ships"; but the reference is doubtless to his criticism of some detail of the scheme. It is probable that the criticisms of others led Demosthenes afterwards to modify the details; and Deinarchus states, as a matter of course, that he did so for money (*Dein.*, *in Dem.*, § 42). Demosthenes (*de Cor.*, § 312) speaks of a damaging attack upon his law by Æschines, acting as the hireling of the wealthy members of the Naval Boards. We do not know when this took place; but it was probably some time after the law had come into working; since we gather from Æschines, *l.c.*, that the attack was based on the effects of the law.

9. Plutarch (*Phoc.*, xiv.) says that Chares was obliged to wander about, getting money from allied cities and despised by the enemy. It is, however, possible that the real reason for his

withdrawal was the death of his wife, and there is some evidence that he contrived to operate effectively against Philip at sea. See Schäfer, ii., pp. 508, 509, and references there given.

10. Some writers believe (on the evidence of a statement in Diod., XVI, lxxvii., which in any case is far too sweeping) that Philip now made peace with the Byzantines and their Greek allies, with the exception of Athens; but the evidence is not sufficient to show whether any arrangement was really made. See Grote, pt. ii., ch. 90.

THE ATHENIAN TREASURY AND MUSEUM AT DELPHI

CHAPTER X

CHÆRONEIA

WE must now go back a few months, to the meeting of the Amphictyonic Council which took place in October or November, 340.¹ At this meeting, the representatives of the Locrians of Amphissa, who in the Sacred War against the Phocians had been on the same side as the Thebans and Philip, proposed that a fine of fifty talents should be inflicted upon Athens, because the Athenians had hung in a new chapel or "treasury" in the precincts of Apollo at Delphi certain shields which they had taken in the Persian wars, without waiting for the dedication of the chapel, and in regilding the shields had inscribed upon them the words, "The spoil of the Athenians, taken from the Persians and the Thebans, when they fought against the Greeks." (The words had doubtless been inscribed upon them originally, but they may have become obscure through age.)

The Athenian "Hieromnemon" or representative on the Council was Diognetus; while the official delegates, or Pylagori, sent by Athens were Æsch-

¹ Note 1 at the end of the Chapter.

ines, Meidias, and Thrasycles.¹ When the Locrian representative had spoken, Diognetus sent for Æschines, and asked him to reply on behalf of Athens. But when he had entered the Council-meeting and was beginning to speak, one of the Locrians present—an ill-mannered fellow, Æschines declared, and perhaps prompted by some evil power—rose and told the meeting that they ought not to have allowed the name of the Athenians to be mentioned during that holy season, but should have excluded them from the temple as accursed, on account of their alliance with the sacrilegious Phocians. Æschines tells us that at this he became more angry than he had ever been in his life, and retaliated upon the Amphisseans by denouncing their impiety in cultivating the plain of Cirrha, which had been devoted to Apollo for ever in the time of Solon, and in making money out of the sacred harbour. Pointing to the plain, which lay spread out below them, and recalling its history, he declared that he himself and the People of Athens were ready to defend the consecrated land “with hand and foot and voice,” and by every possible means.

And so [he continued], do you take counsel for yourselves. The sacrifices stand ready to be offered, and you are about to ask the gods for their blessing upon yourselves and your country. With what words, with what conscience, with what faces, with what

¹ Note 2. We have only Demosthenes' word for the statement that Æschines was elected by the Assembly when hardly any one was present.

confidence, can you dare to make your supplications, if you have left this accursed people unpunished? In plain and unambiguous words the curse stands inscribed against those who have committed such misdeeds, and those who have condoned them; and in it is the prayer that those who have not come to the help of Apollo and the other gods of Delphi may not sacrifice aright, and that the gods may not receive their offerings.

Such was the impression made by the fiery eloquence of Æschines upon men who (as Demosthenes says¹) were unused to oratory, that their anger was now turned against the Amphisseans; and the Council bade their herald summon the whole adult population of Delphi to meet the Council and the delegates at day-break with pick-axes and spades, on pain of falling under a curse. The crowd thus collected descended next morning to Cirrha, destroyed the harbour, and set fire to some of the houses. But the people of Amphissa, hearing what had been done, came down in force from their own town, attacked the Delphians, and did some violence to the sacred persons of the Amphyctyonic Councillors, who with difficulty made their way back to Delphi. Next morning the president of the Council, Cottyphus of Pharsalus, convoked an assembly of all the worshippers of the god who were present in Delphi. The con-

¹ No doubt truly; for they were mostly representative of the northern Greek tribes, who were not nearly so civilised as the Athenians.

duct of the Amphisseans was censured in strong terms; and it was resolved that the Council should hold an extraordinary meeting at Thermopylæ, before their next regular meeting, and should prepare a decree inflicting proper punishment upon the Amphisseans for their impiety in encroaching on the sacred ground, and doing violence to the Amphictyons.

When Æschines made his report at Athens, the Assembly at first strongly commended his action, though Demosthenes declared that it must lead to an Amphictyonic war against Athens—a prophecy which many supposed to have been prompted merely by personal ill-will against Æschines.¹ When however the decision came to be taken whether the Athenian representatives should attend the special meeting which had been ordered, Demosthenes, having first persuaded the Council, carried a resolution in the Assembly forbidding them to do so. (Æschines alleged that this was only done by a snatch-vote taken in his own absence.) The extraordinary meeting took place early in 339,² when Philip was far off in Scythia. No representatives of Athens or Thebes were present. War was declared by the Amphictyonic Council against the Amphisseans, and Cottyphus was appointed to command the Amphictyonic troops.

¹ The prophecy was fulfilled, not indeed immediately or literally (for Æschines had in fact averted this), but in all practical effect, a few months afterwards.

² Probably in January or early in February. See Note 3.

THE GRAND ALTAR AT DELPHI

PHOTO BY ALINARI

At this point there is a discrepancy between our two authorities. Æschines states that, as the result of the first campaign, the Locrians were ordered to pay a fine by a specified date, to banish those who were responsible for their impious acts, and to recall those who had opposed them. Demosthenes, on the other hand, says that Cottyphus could only obtain troops from the Amphictyonic powers, and these (in the absence of support from Athens, Thebes, Sparta, and Philip) were ineffective; some did not even answer his summons, and the campaign was a failure. Whether on this account, or on account of the failure of the Locrians to pay the fine and carry out the other requirements of the Amphictyons, the question of the conduct of the war was reconsidered at the regular meeting of the Council in May or June, at which Cottyphus declared that unless the Amphictyonic peoples would take the field, and contribute sufficient funds, and fine those who would not serve, the only chance of success was to appoint Philip their general. The Councillors (mostly representatives of tribes which were in alliance with Philip) took the easier course, and elected Philip. His wound had healed; he accepted the invitation, and marched southward.

Such was the course of the events which led to a struggle more momentous, perhaps, than any since the Persian wars. What was the meaning of them? Demosthenes asserts that Æschines

had been bribed by Philip to attack the Amphisseans, and so create a situation in which Philip could again intervene. He denies that the Amphisseans had made any complaint against Athens, since they could not have done so without giving the Athenians formal notice, and such notice had never been given. But an argument based upon such a technicality is inconclusive. The speech of the Locrian representative may not have been in order, and may yet have provoked a reply; or it may rather have been a notice of motion than a formal motion. Æschines cannot at least be denied the excuse of having acted under provocation. But was his action in itself justifiable? This too it is difficult to deny; it seems extremely likely that he really prevented the declaration of an Amphictyonic war against Athens; there is not the least evidence that his action was prompted by Philip; and he probably acted in good faith, when confronted by a critical situation.

What then was the explanation of Demosthenes action? Æschines asserts that Demosthenes was in the pay of the Locrians of Amphissa, and had not only been bribed by them, when he was Pylagorus in 343, to say nothing of their impious acts to the Amphictyonic Council, but was actually receiving twenty minæ a year from them, on the understanding that he would forward their interests at Athens in every way. But it is possible to place a more honourable construction upon his action. The attack upon Athens in the Amphic-

tyonic Council had been made by the Amphisseans as friends of the Thebans, whose feelings had been hurt (probably through pure thoughtlessness) by the restoration of an inscription which might more happily have been suffered to remain obsolete, and the revival thereby of the record of an old stain upon their history,—their abandonment of the Hellenic cause at the time of the Persian invasion of 480. Demosthenes saw that, if Athens was to hold out against Philip, she must not quarrel with Thebes, and therefore must not join in action against the Amphisseans. He must also have known that the Thebans were growing discontented with their condition as allies of Philip, as they came to realise that they could only occupy a position of secondary importance. Indeed they had committed at least one definitely unfriendly act against Philip: for while he was in Scythia, they had expelled the Macedonian garrison which he had placed in Nicæa, and had occupied the place themselves¹; his garrisoning of their colony at Echinus had probably offended them; and it could hardly please them that those Peloponnesian peoples who had once relied upon them now looked to him as their protector. The feelings of the Thebans would naturally have been made known to Demosthenes by visitors from that city, since he was Proxenus or Consul of Thebes in Athens. Further, though it was true that Æschines had diverted the immediate attention of the Amphic-

¹ Philochorus, *ap.* Didym., *schol. in Dem.*, Col., xi.

tyons from Athens to the Amphisseans, it was also true, as Demosthenes declared, that to rouse the Amphictyons, and particularly to rouse them against the Amphisseans, who had been Philip's allies, was an action not unlikely to give Philip an opening for intervention, and to render it probable that Athens would suffer as much as Amphissa. Demosthenes was convinced that Philip was bound to take some action against Athens before long; for although after Phocion's retirement the Athenian admirals seem to have carried on hostilities against Philip with poor success, the trade of the Macedonian ports suffered greatly from the raids made by Athenian ships,² and he was certain to desire to retrieve his reputation after his failure before Perinthus and Byzantium. And so it was even more necessary than before to preserve the good-will of the Thebans, whose feelings and interests were now being brought by the force of circumstances into harmony with those of the Athenians.

From this point of view, Demosthenes' refusal to countenance the attack of the Amphictyons upon the Amphisseans, the friends of Thebes, was wise and far-sighted, and the event fully justified it. But public opinion at Athens was still too ill-disposed towards Thebes to allow Demosthenes to give to the Assembly, as the real reason for his policy, his desire to make friendship with the

² Dem., *de Cor.*, §§ 145, 146.

Thebans: and hence he doubtless used other arguments.¹

Some writers indeed have reproached Demosthenes for not allowing Athens to join in the war against Amphissa, in the belief that the appeal to Philip would have been rendered unnecessary if the Athenians had taken part in the war with vigour. But the struggle with Philip was bound to come soon; and it was not a time to alienate the most powerful ally whom Demosthenes hoped to gain, on the chance of postponing the struggle for a little. Others have said that, by following Demosthenes' policy, Athens lost her chance of joining in a great national enterprise, first in vindication of the national god of Delphi, and then in a campaign with Philip against Persia, crushing Thebes if necessary on the way. But—leaving aside the question whether Philip's aims were national and Hellenic, or whether he was not primarily interested in the enlargement of the Macedonian Empire—was a "national" enterprise, in which Athens would probably have to take the second place, reconcilable with the Athenian ideal, as Demosthenes interpreted it, and as it was probably viewed by his fellow-countrymen? Was it to be expected that any alliance between an absolute monarch and the democracy of Athens would be secure? And how were the People to be

¹ Æschines probably shared the popular animosity against Thebes, much as he afterwards lamented her overthrow by Alexander.

led to make an alliance which could only appear to them a surrender of the brilliant prospect of success opened up by the history of the last year? It seems then that Demosthenes took the one path which was consistent both with prudence and with the national honour, as the Athenians generally conceived it.

To the question whether the original complaint of the Amphisseans against Athens had been prompted by Philip, in the hope of stirring up an Amphictyonic war against Athens, no answer can be given. (If it was so, Æschines accidentally traversed Philip's purpose.) It is not inconceivable that it was so, for Philip must have known, as well as Demosthenes, that a final struggle with Athens had to come, and that owing to the defeat of the Macedonian party in Athens by Demosthenes, the issue could not be decided by treachery or by diplomacy, but only by arms, and an Amphictyonic war would be a highly convenient method of action. There is however no evidence which can be brought to bear on the question. That Cottyphus was acting deliberately in Philip's interest is stated by Demosthenes and others,¹ and is the more likely, perhaps, because his native town, Pharsalus, had greatly benefited by Philip's favours.

Philip, with an army composed of Macedonian and Thessalian troops, marched southward, without delay, taking, probably, the direct road from Lamia to Cytinium in Doris, and avoiding Ther-

¹ *E.g.*, Schol. on *de Cor.*, § 151.

THE PASS OF GRAVIA AND SITE OF CYTINIUM
FROM A DRAWING BY DR. G. B. GRUNDY

mopylæ. He first occupied Cytinium, which commanded the road over the mountains (by the Pass of Gravia) to Amphissa, the nominal goal of his march; but instead of proceeding directly to Amphissa, he diverged into the high-road which led into the Phocian plain, and thence to Thebes and Athens, and (early in September, 339) seized Elateia, which commanded the road at a point only a few miles north of the Bœotian frontier. It is highly probable that he also secured the less important routes over the mountains from Thermopylæ into the plain, which they enter near the modern villages of Dernitsa and Turkoçhori. With regard to the force in Nicæa at this moment there is some doubt; probably it was still in the hands of the Thebans, who had seized it in the previous year, but soon after his occupation of Elateia Philip requested them to hand it over to the Locrians in whose district it stood¹; and it is possible that he had previously been making friends with this branch of the Locrian stock, on finding that the Thebans were becoming disaffected towards him.² However that may be, by fortifying Elateia he placed himself in a very strong position: the main roads in his rear were absolutely secure, and the position also had other advantages.

¹ Didym., *schol.*, Col. xi.

² So Glotz argues (*Bull. Corr. Hell.*, 1909, pp. 526 ff.). But the evidence which Glotz offers in support of his conjecture that Philip had also been entering into friendship with the Phocians and that he occupied Elateia as the friend of the Phocians, in whose territory it lay, is far from conclusive.

It may be taken as certain that the occupation of Elateia was primarily intended by himself as a menace to Thebes, and a warning to her to renew her rapidly vanishing friendship towards himself; and it was convenient to convey this without actually entering Boeotian territory, for that would have thrown Thebes into the arms of Athens. It seems equally certain that Philip intended now to make an end, once for all, of the opposition to himself in Greece. But, as usual, he wished to have some plausible ground for his action. The pretext for his presence in Greece was the commission given him by the Amphictyons to destroy Amphissa; but had he executed this commission at once, the pretext would have disappeared; his ostensible purpose would have been fulfilled, and he would have had no specious excuse for remaining in Greece. Besides this, the Phocian plain doubtless offered his army a better supply of food than the mountains between Cytinium and Amphissa could have afforded. For all these reasons, he occupied Elateia.

The Athenians were at first paralysed by the news; for not having realised (as Demosthenes had) the growing estrangement between Philip and the Thebans, they assumed that he had come to join forces with the Thebans, and to march with them upon Attica. A very famous passage of the *Speech on the Crown*¹ describes the effect of the news.

¹ *De Cor.*, §§ 169 ff.

It was evening, and one had come to the Prytanes¹ with the news that Elateia had been taken. Upon this they rose up from supper without delay; some of them drove the occupants out of the booths in the market-place and set fire to the wickerwork,² others sent for the generals and summoned the trumpeter, and the city was full of commotion. On the morrow, at break of day, the Prytanes summoned the Council to the Council Chamber, while you made your way to the Assembly, and before the Council had transacted its business and passed its draft-resolution, the whole People was seated on the hillside.³ And now, when the Council had arrived, and the Prytanes had reported the intelligence which they had received, and had brought forward the messenger, and he had made his statement, the herald proceeded to ask, "Who wishes to speak?" But no one came forward; and though the herald repeated the question many times, still no one rose, though all the generals were present, and all the orators, and the voice of their country was calling for some one to speak for her deliverance. For the voice of the herald, uttered in accordance with the laws, is rightly to be regarded as the common voice of our country. And yet, if it was for those to come forward who wished for the deliverance of the city, all of you and all the other Athenians would have risen, and proceeded to the platform; for I am certain that you all wished for her deliverance. If it was for the wealthiest, the Three Hundred would have risen, and if it was for those who had both these qualifica-

¹ The acting committee of the Council.

² Probably a bonfire was a method of summons to an extraordinary meeting of the Assembly.

³ *I.e.*, on the Pnyx.

tions—loyalty to the city and wealth—then those would have risen who subsequently made those large donations; for it was loyalty and wealth that led them so to do. But that crisis and that day called, it seems, not merely for a man of loyalty and wealth, but for one who had also followed the course of events closely from the first, and had come to a true conclusion as to the motive and the aim with which Philip was acting as he was. The man who was needed was found that day in me.

Demosthenes then describes how he dispelled the belief that Philip had a satisfactory understanding with the Thebans, and that it was therefore too late to prevent him from marching, with them, into Attica. Had this been so, they would have heard of his being, not at Elateia, but on the borders of Attica. It was because the attitude of the Thebans was still uncertain that he had occupied Elateia, in the hope of encouraging his friends in Thebes, and intimidating his opponents, and so compelling them to join him, whether they would or no. This, Demosthenes declared, there was still time to prevent, if the Athenians would forget their grudges against the Thebans, and offer them an alliance on generous terms. At the same time they must show that they were in earnest, by immediately arming all the citizen-troops and cavalry, and ordering them to march to Eleusis (the first halting place on the most convenient road to Boeotia); and they must give the envoys to be sent to Thebes, with the generals, full power to decide the

steps to be taken next. His eloquence carried the Assembly with it: the levy of troops was ordered, and he himself, with others, was immediately despatched to Thebes. "This," he says, "was the first step towards our new relations with Thebes: the danger had seemed likely to descend upon the city like a torrent in winter"¹; but "this decree caused the peril that encompassed the city to pass away like a cloud."²

On his arrival at Thebes, Demosthenes found envoys from Philip and the Thessalians already there.³ Philip was represented by Amyntas and Clearchus, his allies by Thrasydæus and Daochus.⁴ Though the Thebans had been the friends and allies of the Amphisseans, against whom he was ostensibly marching, Philip was prepared to treat them as neutrals, if they would either join him in marching into Attica, or would even allow him and his army an unopposed passage through Bœotia. The Theban Assembly first heard the envoys of Philip and his allies, who recalled all the deeds which the Athenians had ever done against Thebes, and held out the prospect of the enrichment of the Thebans with Attic plunder, or, if they refused Philip's overtures, of the plunder of Bœotia itself by his forces.⁵ Demosthenes

¹ *De Cor.*, § 153.

² *Ibid.*, § 188.

³ *Ibid.*, § 211.

⁴ Diodorus states that Python was one of Philip's envoys, but the quotation which he gives from *de Cor.*, § 136, refers to another occasion.

⁵ *Dem.*, *de Cor.*, §§ 213, 214.

does not record his own reply in full: but there can be little doubt that he urged that if the Thebans joined Philip, the only result would be that Philip would be enabled to subdue Athens and Thebes separately, whereas the two cities, if united, might hope to defeat his arms entirely; he doubtless appealed with his matchless eloquence to the sense of Hellenic patriotism, and the terms which he offered were extraordinarily generous, in view of the previous relations between the two States. Thebes was to be recognised as mistress of Bœotia, and the Athenians undertook to assist her against any city that refused obedience to her; the command of the forces at sea was to be shared; the Thebans were to command on land, and the Athenians were to pay two thirds of the cost of the campaign.

At a later day Æschines bitterly attacked Demosthenes for offering terms so favourable to Thebes, and (as he declared) so humiliating to Athens. Nor can it be denied that to abandon the cause of Thespiæ and Plataæ, the independence of which she had always championed, was to abandon a very noble element in the traditional policy of Athens; and it must also have touched her pride to give up Oropus. But as regards the division of the expenditure, it must be remembered that, in consequence of her situation, Thebes would have to defray the greater part of the cost of maintaining the troops quartered in her territory; and, in the position in which the Athenians were

placed, it would have been madness to quarrel over the precise apportionment of responsibility and privilege between the two parties in the alliance. There is no doubt that Demosthenes acted boldly, for a member of a democracy, in offering such terms on his own authority; but the stake was worth the cost to Athens and the risk to himself. There is no more characteristic passage in his speeches than his defence against Æschines' strictures upon this agreement with Thebes.¹

If you refer, Æschines [he says], to what was fair as between ourselves and the Thebans or the Byzantines or the Eubœans—if at this time you talk to us of equal shares—you must be ignorant, in the first place, of the fact that in former days also, out of those ships of war, three hundred in all, which fought for the Hellenes, Athens provided two hundred, and did not think herself unfairly used, or let herself be seen arraigning those who had counselled her action, or taking offence at the arrangement. It would have been shameful. No! men saw her rendering thanks to Heaven, because when a common peril beset the Hellenes, she had provided double as much as all the rest to secure the deliverance of all. Moreover, it is but a hollow benefit that you are conferring upon your countrymen by your dishonest charges against me. Why do you tell them *now*, what course they ought to have taken? Why did you not propose such a course at the time (for you were in Athens and were present) if it was possible in the midst of those critical

¹ *De Cor.*, §§ 238 ff.

times, when we had to accept, not what we chose, but what circumstances allowed?

What, he asks, would his opponents have said, if he had haggled over the terms, and the Thebans had joined Philip?

The Thebans and Athenians, in pursuance of Demosthenes' proposals, now sent urgent embassies to the other Greek States in the hope of winning their support, while Philip himself, fully realising the gravity of the crisis, wrote to his own allies in the Peloponnese (who had for the most part been hitherto on friendly terms with Thebes), representing himself simply as the champion of the Amphietyons against Amphissa, and (if Demosthenes' account is to be trusted) dissimulating his further intentions.¹ The Arcadians, in spite of their alliance with Philip, determined to remain neutral. The Messenians and the people of Elis followed their example. The Spartans, though hostile to Philip, adhered to the policy which they had followed for some years, of eschewing all entanglement in foreign affairs. Those who supported the Athenian and Theban cause were the Eubœans, Achæans, Megareans, and Acarnanians, and the inhabitants of Corcyra and Leucas.

Those politicians in Athens who were opposed to war attempted to find support in the evil omens which were reported shortly after Demosthenes' decree had been carried and acted upon. The

¹ *Ibid.*, §§ 156, 218, 222.

Delphic oracle prophesied calamity, and old oracular sayings were quoted to the same effect.¹ At Thebes, statues were said to have dripped with blood.² Worse still, on September 21st, when the candidates for initiation in to the Eleusinian mysteries went down to the sea to purify themselves, some of them were killed by a shark.³ But when it was proposed to consult the oracle once more, Demosthenes declared that the priestess of Delphi had "philippized," as she had "medized," or taken the Persian side, in the Persian wars, and he reminded both Athenians and Thebans how the greatest statesmen of each city, Pericles and Epameinondas, had scorned such pretexts for cowardice as were now put forward.⁴ Nor would he permit the march of the troops from Athens to be delayed by unfavourable omens at the sacrifices offered on their behalf; and for the time, both in Athens and in Thebes, his word was law.

The measures which Demosthenes proposed could not be carried through without funds. To provide these, Demosthenes urged once more, and this time with success, that the surplus revenues which had been spent on festivals should be applied to military purposes.⁵ He also carried a resolution suspending for the time the work of repairing the docks and the arsenal, and so set

free a considerable sum. It is in this same year that we hear first of the "treasurer of the military fund," and it is highly probable that the office was now constituted for the first time. The office was held by Callias, the nephew of Lycurgus; and Lycurgus himself, an able and courageous financier, and an ardent supporter of Demosthenes, became a member of the Theoric Commission in 338, and for the next twelve years, either in virtue of his own official position, or through his friends in office, controlled the financial administration of Athens.¹

At the earliest possible moment² the Athenian forces joined those of Thebes, and received, on their arrival at that city, a warm and friendly welcome.³ Freely received into the houses of the Thebans, they in no way abused their privileges, and the official friendship between the two States was doubtless confirmed by the personal good feelings thus generated. The allied forces now fortified the passes⁴ through which Philip's route into Boeotia would necessarily lie. The most important of these was the Pass of Parapotamii, through which the Cephissus flowed from the Phocian into the Boeotian plain; the minor passes which crossed the same range (such as that leading

¹ See Note 5.

² If any reliance is to be placed on *Æsch.*, in *Ctes.*, §140, the troops did not even wait for the formal ratification of the alliance by vote of the Assembly. ³ *Dem.*, *de Cor.*, §§215, 216.

⁴ I follow closely the account of the campaign given by Kromayer, *Antike Schlachtfelder in Griechenland*, vol. i., which has superseded all previous work on the subject.

to Daulis, and another at the eastern end of Mt. Hedyleium) were doubtless also occupied.¹ At the same time, at the request of the inhabitants of Amphissa, a force of ten thousand mercenaries under Chares was sent to guard the approach to that town from Cytinium (which Philip's troops had occupied) by the Pass of Gravia; and the chief command at this station seems to have been held by the Theban Proxenus.²

In the earliest engagements, which Demosthenes describes as "the winter battle," and "the battle by the river," the allies were successful. (It seems likely that these engagements resulted from attempts on the part of Philip to force a way through the Pass of Parapotamii.) The allies also fortified Ambrysus, and perhaps other Phocian towns, which had been destroyed by Philip during the Sacred War.³ Their spirits rose; mutual congratulations passed between Athens and Thebes; sacrifices and processions were held at Athens in gratitude to the gods, and the city, Demosthenes tells us,⁴ was "full of pride and joy and thanksgiving." Demosthenes himself, upon the motion of Demomeles, supported by Hyperides, was awarded a golden crown, which was publicly conferred on him at the Dionysiac festival in March, 338, and though Demomeles was prosecuted for the alleged illegality of the decree by

¹ See map.

² *Æsch.*, in *Ctes.*, § 146; *Deinarch.*, in *Dem.*, § 74.

³ *Paus.*, IV, xxxi., § 3. See Note 6. ⁴ *De Cor.*, § 216.

Diondas, he was acquitted, and the prosecutor failed to obtain even one fifth of the votes of the jury—the proportion necessary to save him from a heavy fine. Philip appears to have thought it best to wait for reinforcements,¹ before taking further active measures.

It has often been argued that, in spite of these early successes won by the allies, the purely defensive tactics adopted by them, and the division of their forces, in consequence of the despatch of one quarter of the army to guard Amphissa—nearly twenty miles away from the main body at Parapotamii—were serious strategical errors. The latter step was strongly opposed by Æschines at the time, when it was proposed in the Assembly by Demosthenes, and he made it a point in his attack upon Demosthenes at a later date.² As regards the defensive attitude of the allies, they should have seen, it is urged, that they would be no better off, even if they remained in occupation of the passes for an indefinite time: Philip would still be undefeated and a menace to Bœotia and Attica, and their troops would be growing impatient at the prolonged hardships of camp-life. In reply it has been pointed out³ that the line of defence chosen—the series of passes from Mount Parnassus to Lake Copais—was a very good one, completely protecting Bœotia and therefore Attica

¹ Diod., XVI, lxxxv.

² *In Ctes.*, §§ 146, 147.

³ By Kromayer, *op. cit.*

also; that it would have been difficult or impossible for Philip to circumvent the defenders at either end of the line; and that by the occupation of these passes, as well as of the southern end of the Pass of Gravia, Philip was cut off (as he could have been cut off by no other method) from access to the Gulf of Corinth and his Peloponnesian allies; while the Pass of Gravia was itself easy to defend from the south, as modern no less than ancient experience has shown, owing to the nature of the country. Besides this it was highly probable that Philip would not be able to remain for an indefinite time at Elateia, but would be forced to return by the unsettled state both of his own frontiers and of his recently acquired dominions in Thrace. If, on the other hand, Philip attacked and succeeded in forcing the passes, the allies could still fall back on the plain of Chæroneia, and choose their ground for battle.

The fact that in the end Philip defeated the allies was due less to defects in their general plan of campaign than to his astuteness and knowledge of human nature. He was well aware that a mixed force of citizens from two large and several small States, combined with bodies of mercenary soldiers, was not likely to be completely under the control of a single authority, exercising equal caution and foresight at all points. Taking advantage, no doubt, of a favourable moment, and having (we may surmise) prepared the way by spreading rumours of his feigned intentions, he arranged that

a letter addressed to his general, Antipater, should fall into the hands of Proxenus and Chares, the commanders of the allied forces stationed near Amphissa, stating that he was compelled suddenly to return, in order to quell a revolt in Thrace.¹ To give colour to this statement, he withdrew his troops from Cytinium. Thereupon the mercenary force guarding Amphissa naturally became slack, and neglected to keep guard. Suddenly, by a forced march, Philip, with a large body of troops, swept through the Pass of Gravia by night, annihilated the defending force, descended upon Amphissa, and took it. The town was afterwards destroyed by order of the Amphictyonic Council.² He then, by a vigorous move, pushed on to Naupactus—at least two days' march—and took it, giving it, as he had promised,³ to his allies the Ætolians, and returning to Amphissa before his enemies could take any steps against him.⁴ He had thus opened for himself a way to the Corinthian gulf,⁵ and further, by occupying Amphissa and the surrounding territory, he had gained command of the passes leading through the outlying ranges of Mt. Parnassus and Mt. Korphis into the plain of the Cephissus to the south of Chæro-neia. His troops could now, if he desired, come round by these passes and harass the allied army

¹ Polyænus, IV, ii., 8.

² Strabo, ix., p. 427.

³ Dem., Phil. III, § 34.

⁴ See, however, Note 7.

⁵ This is true, whether Naupactus was taken on this occasion or not.

at Parapotamii from the rear. Of this possibility he at once took advantage, sending flying corps which plundered the western plains of Boeotia. He himself returned to Elateia.

It was perhaps just after this that Philip once more attempted to achieve his ends by diplomacy, instead of by further fighting. He sent envoys both to Athens and Thebes. At Athens, though Phocion warned his countrymen to reflect upon the consequences of defeat, and to make terms with Philip, Demosthenes (so Æschines asserts) threatened to drag any one to prison by the hair who mentioned peace; and when the Boeotarchs at Thebes showed an inclination to listen to Philip, he denounced them in the Athenian Assembly as traitors, and proposed to send a herald to Thebes to ask for a free passage for the Athenian forces marching against Philip, with the result that the Thebans were shamed into abandoning all thought of peace. He urged upon the Athenians the importance of fighting at as great a distance as possible from the city, and his influence both in Athens and Thebes was sufficient to ensure the continuance of the struggle.*

The generals at Parapotamii, finding their communications with Thebes and Athens threatened by Philip's light troops, now withdrew from the passes into the plain of Chæroneia, where they could check the plundering forays, and choose an advantageous position for the decisive battle.

* See Note 8.

Upon this Philip recalled his light troops and reunited them with his main army, and so with all his forces marched through the Pass of Parapotamii into the plain, and confronted the allies.

The decisive battle took place on the 7th of Metageitnion (probably the 2nd of August, in our reckoning¹), 338. The allies' line stretched across the plain of Chæroneia, the left wing resting against the rocky hill of Petrachos, on which the town was built, the right touching the Cephissus, where it runs close beneath the steep western end of the mountain spur called Acontium. The total length of their front was perhaps a little over a mile. The allied army contained between thirty thousand and forty thousand men, of whom Thebes supplied twelve thousand infantry (including the "Sacred Band," with whom it was a point of honour to stand by one another to the death) and eight hundred cavalry, Athens about ten thousand infantry and six hundred cavalry, and the smaller states perhaps nine thousand infantry; the mercenaries employed numbered about five thousand, and the cavalry were made up by various contingents to two thousand in all.² Behind the left wing lay the entrance of passes leading to Lebadeia and Coroneia, by which, in case of need, it would be possible to retire without

¹ See Kromayer, *op. cit.*, p. 185. The alternative date is September 1st.

² This is Kromayer's computation, based upon calculations as probable as our information allows.

being harassed by cavalry in pursuit. This wing was constituted by the Athenian army, commanded by Stratocles, Lysicles, and Chares; Demosthenes himself served among the infantry, the words "Good Luck"¹ inscribed upon his shield. In the centre were the mercenaries and the contingents of the small States. The right wing was the post of greatest danger and responsibility. If the enemy could force their way through the defenders' line here, there was no means of outflanking them,² the plain would be open to the victors, and they would be able to cut off the retreat to Coroneia. In this position the Thebans were stationed under Theagenes. The Macedonian army numbered about thirty thousand infantry and two thousand cavalry—a rather smaller force than that of their opponents, but for the most part drilled to act in unison, and all under the command of one master-mind.

At the Theban end of the line the battle was at first hotly contested; but the young Alexander, whom Philip had placed in command of the Macedonian left, through his personal bravery and the encouragement given by it to his men, at last succeeded in forcing a way through the Theban ranks. Philip, on the contrary, on the Macedonian right, withdrew step by step before the

¹ Ἀγαθὴ τύχη.

² They might possibly, though not easily, have been outflanked, after forcing their way through, from the side of Chæroneia on the other wing.

impetuous onset of the Athenians, who felt confident of victory. Stratocles even bade his men pursue the enemy to Macedonia itself.¹ "The Athenians do not know how to win a victory," Philip is said to have remarked, as he observed the violence of their attack, and proceeded to draw them yet farther from the favourable position, on somewhat higher ground than his own, which they had at first occupied. At length, when he had retired about half a mile, and the Athenians, already tired,² had behind them, not the entrance to the passes, but only the steep rocky hill of Petrachos, which made retreat impossible for them, Philip suddenly halted and bade his men return the Athenian attack.³ His plan was entirely successful; the Athenian line was broken; and Alexander, having forced his way through on the other wing, now threatened the allies in the rear. The position was hopeless. Some who were nearer the centre were able to escape and make for the passes, but those on the extreme left wing, caught between the enemy and the rocks, could only surrender or perish.⁴ A thousand Athenian citizens were killed and two

¹ Polyænus, IV, ii., 2. ² Polyæn., IV, ii., 7; Frontin., II, i., 9.

³ Some ancient writers (*e. g.*, Diod., XVI, lxxxv.) ascribes Philip's sudden change of tactics to jealousy of Alexander, but it can scarcely be doubted that military considerations were really the determining motive.

⁴ None of our authorities say anything about the action of cavalry in the battle; but probably Philip completed his work by bringing his cavalry round upon the Athenian wing.

thousand taken prisoners. All who could fled in headlong rout, and among them Demosthenes. On the other wing, the Sacred Band had been cut to pieces where they stood, and the general loss in the Theban ranks was very heavy. No serious pursuit was attempted; probably Philip's men were too much exhausted; and the fugitives collected at Lebadeia.

Demosthenes was perfectly justified in hinting¹ that bad generalship was the cause of the defeat. There was no one commander, directing the operations of the allies as a whole. Phocion, the greatest Athenian general then living, had perhaps been away with the fleet in the Ægean when the commanders were being elected,² or else was not appointed owing to his known disapproval of the campaign; and the Greek commanders were entirely outgeneralled by Philip, who had already proved in previous contests the effectiveness of a feigned retreat, and of tiring out the enemy before attacking them. Lysicles, who, like Chares, was among the fugitives, was condemned to death by a jury at Athens; Lycurgus, who prosecuted, demanded of him how, after a defeat which entailed the death and capture of so many of his fellow-citizens and the enslavement of all Greece, he could dare to walk the streets of Athens in open day, being, as he was, a living reminder to his country of her shame and reproach.³

¹ *De Cor.*, §§ 194, 245.

² *Plut., Phoc.*, xvi.

³ *Diod.*, XVI, lxxxviii.

Of Stratocles we hear no more. Chares perhaps did not return to Athens.

Thus the cause of Hellenic liberty, for which Demosthenes had striven for so many years, was finally lost. A few brief struggles had yet to be made, but the battle of Chæroneia was in effect a thoroughly decisive blow. "With the bodies of those who fell here was buried the freedom of the Hellenes."¹ Close to the battle-field, where the Theban dead were buried, a marble lion was erected in memory of those who had died for freedom. This monument has in recent times been restored from the ruin into which it had fallen, and re-erected on or near the spot on which it originally stood.

Eight years afterwards in the Speech on the Crown,² Demosthenes was called upon to defend the policy which had led to so disastrous a failure. Æschines had left no argument untried which could fasten the defeat of Chæroneia upon his rival. The defence which Demosthenes made was, in effect, that since the policy was the only right and worthy one for Athens and since all that an orator or a statesman could do to make it successful had been done, he was not to blame if, through bad generalship or the inscrutable will of Heaven, the struggle had ended in defeat.

In everything the issue falls out as Heaven wills, but the principle which he follows reveals the mind

¹ Lycurgus, in *Leocr.*, § 50.

of the statesman. Do not therefore count it a crime on my part that Philip proved victorious in the battle. The issue of that event lay with God, not with me. But show me that I did not adopt every expedient that was possible, so far as human reason could calculate; that I did not carry out my plan honestly and diligently, with exertions greater than my strength could bear; or that the policy which I initiated was not honourable, and worthy and indeed necessary; and then denounce me, but not before.

He claimed above all to have interpreted aright the deepest instincts of his fellow-countrymen,¹ and only those who believe that no attempt is justifiable which fails can refuse to accept his plea. For years he had striven to foster the love of liberty in the Athenian people, until at last they were ready to sacrifice everything else for the one thing which they counted best, as their fathers had done before them. To have succeeded in this aim, to have produced so great a moral reaction in a people who were tending more and more to yield to the pleasure of the moment, and to sacrifice national to private considerations, was in itself, perhaps, a greater service to his country than any success which a general might have won. That he had not misinterpreted the feelings of his countrymen was shown by their steady support of him in the ensuing years, in face of all the attacks of time-serving enemies. Defeated undoubtedly the Athenians were, but they had become them-

¹ *Ibid.*, §§ 199, 206. See pp. 329, 490.

selves once more, if only for a moment, they had fought for the noblest cause known to the Hellenic world, and the consciousness of this must at least have been some consolation to the nobler spirits among them in the years which followed the battle of Chæroneia.

NOTES ON CHAPTER X

1. The story is told by Æsch. in *Ctes.*, §§ 113-131, and Dem., *de Cor.*, §§ 143-152, and from the two accounts the facts can be reconstructed with fair probability. It has been disputed whether the quarrel broke out at the autumn meeting of 340, or the spring meeting of 339; but Kromayer, *Antike Schlachtfelder*, i., pp. 181, 182, has shown conclusively that it was at the autumn meeting, in October or November.

2. The Pylagori were not members of the Council, and had no vote in it, but were official representatives of their several States, sent to transact business with the Council. They were perhaps, as a rule, persons of greater distinction than the Hieromnemon. It was as Pylagorus that Demosthenes had attended the Council in 343. (See Sundwall, *Epigraphische Beiträge*, pp. 50, 51.)

3. Kromayer (*l.c.*) shows that Philip must have been elected general at the spring meeting, not the autumn meeting of 339, since the latter only took place in October or possibly early in November. The spring meeting was in May or June, and this would be long enough after Philip's return to Macedonia to justify Æschines' statement (*l.c.*, §129) that it was πολλῶ χρόνῳ ὕστερον, if he returned late in February or in March.

4. Schäfer concludes from the order of Philochorus' statements that Demosthenes carried these measures before the capture of Elateia, but the inference does not seem to be necessary. The measures were passed in the archonship of Lysimachides, *i.e.*, after July 9th, 339; and it does not appear that between that date and the capture of Elateia in September any event occurred of so threatening a character as to induce the Athenian People to divert the theoric money from the festivals—a step to which they had always been obstinately opposed.

5. On the official position of Lycurgus, see Francotte, *Les*

finances des cités grecques, pp. 231, 232. He was for four years a theoric commissioner, and probably held various special commissions during and after that time. The office which most historians suppose him to have held—that of “chief of the administration” (ὁ ἐπὶ τῇ διοικήσει)—does not appear to have been constituted until a later date. Francotte thinks that the office of military treasurer may have existed as early as 347, but his argument is not conclusive.

6. Glotz, *Bull. Corr. Hell.*, 1909, pp. 526–546, argues that the rebuilding of the Phocian towns (except for the fortification of Ambrysus by the allies for purely military purposes) was really the work of Philip, whom he supposes to have become friendly with the Phocians since his rupture with Thebes. This involves a very violent treatment of Pausanias' statements, and does not seem to be proved. It is true that the Phocians are not mentioned among Philip's opponents at Chæroneia. But were the Phocians in a condition to engage in active hostilities at all at this period?

7. The taking of Naupactus by Philip is recorded in Theopompus, fr. 42 (Oxford text), and is placed here by Beloch (who follows Schäfer) because no other date can be found for it, though it is fair to notice that Schäfer has to emend Suidas' statement that the fact is recorded by Θεοπόμπος ἐν β' (Book II), to ἐν ιβ' (Book LII), because Book LII of Theopompus seems to have dealt with this period. Possibly the taking of Naupactus ought really to be placed after Chæroneia. (The event may only have been mentioned in passing in Theopomp., II.). Beloch's argument that after Chæroneia no one resisted Philip is not conclusive. We have no evidence to show that the people of Naupactus may not have done so, and Theopompus seems to imply that they did.

8. The authorities for Philip's communications with Athens and Thebes are Plutarch, *Dem.*, xviii., *Phoc.*, xvi., and *Æsch.*, in *Ctes.*, §§ 149–151. But Æschines' story is not very clear as to the date of these proceedings, and Plutarch gives no precise indication. It is possible that these proceedings really belong to an earlier stage, before the arrangement with Thebes was decisively concluded.

CHAPTER XI

AFTER CHÆRONEIA

THE night after the battle of Chæroneia was spent by Philip in drunken revelry. He mocked triumphantly at the failure of Demosthenes' plans, as he shouted out the opening words of the orator's decrees,¹ beating time with his foot to their half-metrical rhythm. In his intoxication he jeered at his prisoners, until he was suddenly sobered by the remark of one of them, the Athenian orator Demades—"O King, Fortune has bidden you play the part of Agamemnon. Are you not ashamed to behave like Thersites?" At this he tore off his garlands, put an end to the revel, and ordered Demades to be set free.² But when the fugitives, who had assembled at Lebedæa, asked leave to bury their dead, he refused their request, although by so doing he was violating one of the most sacred traditions of Greek warfare; and they were forced to return to their homes, leaving their solemn obligation to their comrades unfulfilled.

The news of the disaster reached Athens first

¹ Δημοσθένης Δημοσθένους Παιανιεὺς τὰδ' εἶπεν.

² Diod. XVI, lxxxvii.; Plut., *Dem.*, xx.

through a rumour from CEnoe¹; but soon the defeated soldiers began to arrive, and its full magnitude became known. Amidst all the anxiety and lamentation of the friends of the soldiers,² the leading statesmen in Athens did not lose their heads for a moment. On the resolution of Hyperides the Assembly passed, without delay, a resolution ordering preparations to be made for the defence of the city. That such a project was not hopeless, even though the country-districts of Attica might be devastated by Philip, was shown by the King's failure to reduce Byzantium, in consequence of his inability to cut off her access to the sea; for in the case of Athens his difficulties would have been far greater. The Council of Five Hundred marched under arms to the Peiræus to take measures for its defence.³ It was resolved to bring the women and children from the country districts into the city, to arm all citizens who were between fifty and sixty years of age as a garrison for the walls,⁴ to restore their civic rights to those who had lost them owing to judicial sentences, to give citizenship to any resident aliens, and freedom to any slaves, who would serve in the forces,⁵ and to appoint Charidemus, Philip's implacable enemy, commander-in-chief.⁶ Demosthenes, on his re-

⁶ Plut., *Phoc.*, xvi.

turn, provided by a series of decrees for the details of the defence—the disposition of the garrisons, the entrenchments, the funds for the fortifications¹; and the confidence of the People in him remained unimpaired. Arms were taken from the temples in which they had been dedicated, and slabs from the tombstones, to meet the urgent need. Demosthenes was also appointed corn-commissioner, and sailed away to procure corn and money for the city's use, while the financial control at home remained in the hands of Lycurgus.

The departure of Demosthenes at this juncture has been criticised with undue harshness. It is said that he quitted Athens when he should have been there to face the consequences of his policy; and that he left Hypereides and Lycurgus to do the hard work, and to incur the subsequent humiliation of submission to Philip. It is at least an equally plausible hypothesis that he was especially selected for the work of collecting corn and money, because all his eloquence would be needed to persuade the allies and others to supply these necessities at such a moment; and it is highly probable that when he left Athens, he did so in the confidence that the work of defence was in good hands, and that the policy of continued resistance to Philip was securely accepted by the People.

¹ Dem., *de Cor.*, § 248. Æschines, *in Ctes.*, § 159, and Plut., *Dem.*, xxi., state that from motives of caution, Demosthenes got his friends (especially Nausicles) to propose these decrees formally.

But this policy was not destined to be carried out, and the line of action adopted by Philip was probably the reason for this. We cannot indeed be sure of the precise order of events during the days which followed the battle of Chæroneia; but it is certain that Philip at once took stern vengeance upon Thebes, and at the same time displayed an astonishing leniency, and even friendliness, towards Athens. He placed a Macedonian garrison in Thebes, and entrusted the government to three hundred of his own supporters, who punished the patriotic party mercilessly with exile, execution, and confiscation.¹ He further decreed the dissolution of the Boeotian league, and the restoration of Orchomenus, Plataeæ, and Thespiæ, which had been traditionally hostile to Thebes.² The Theban prisoners captured at Chæroneia were sold into slavery, and the Thebans had even to pay for the privilege of burying their dead. The obedience of northern Greece was still more firmly secured by the planting of Macedonian garrisons in Chalcis and Ambracia, and (now if not earlier³) by the transference of Naupactus from the Achæans to the Ætolians.

Yet towards Athens Philip took no hostile action. Various reasons for this have been suggested—the difficulty of reducing the city; his genuine admiration of Athens as the centre of Hellenic culture; and (possibly the most important

¹ Justin, IX, iv., etc.

² Pausan. IV, xxvii., § 5, IX, i., § 3.

³ See above, pp. 382, 391.

consideration of all) his desire to obtain without trouble her co-operation in his projected Eastern campaign. In any case Athens was not, like Thebes, a revolted ally of his own,¹ and he might well feel free to be generous. Either Philip's attitude, or a sense (which may have revived in the absence of Demosthenes) of the inevitable hardships which further resistance would entail, brought about a change of feeling in Athens. The appointment of Charidemus, who (as Plutarch states) had been clamorously nominated by the wilder spirits in Athens, was cancelled by the Council of Areopagus, and Phocion was elected in his place; and when Philip sent Demades to Athens, to express his willingness to enter into negotiations, it was resolved to send Phocion and Æschines, with Demades himself, as ambassadors to Philip. By the terms of the Peace of Demades, Athens was permitted to retain possession not only of Athens, but of Delos, Lemnos, Imbros, Scyros, and Samos.² Oropus was restored to her, and the King promised not to send any warship into the Peiræus, or any land-force into Attica. On the other hand, the Athenian alliance was dissolved, and its members (with the exception of the island peoples already mentioned) were declared independent; the Chersonese passed into

¹ The alliance had been formally dissolved by the declaration of war in 340; see p. 350.

² Diod., XVIII, lvi.; Aristotle, *Ath. Pol.*, 61, 62; *C. I. A.*, ii., 824.

Philip's power¹; and Athens herself became the ally of Philip. The bones of the Athenians slain at Chæroneia, who had been burned on the battle-field by the victors, were conveyed back to Athens by Alexander himself, accompanied by Antipater and Alcimachus, two of Philip's ablest generals; and the two thousand prisoners were restored without ransom. The reaction of feeling in Athens produced by this unlooked-for generosity was great. On the proposal of Demades, the citizenship of Athens was voted to Philip and Alexander, it was resolved to erect a statue of Philip in the market-place, and other honours were offered to the two generals.²

For the moment the Macedonian party in Athens seemed to have triumphed; Philip's aim was not, after all, what Demosthenes had said it was—the destruction of Athens; and Æschines at least boasted openly of his friendship with Philip. But on the return of Demosthenes, it was soon seen that the popular confidence in him unshaken. The renewal of the fortifications was actively continued, as inscriptions of the time make plain.³ Instead of hurried preparations for defence, systematic building and modernisa-

¹ It is not mentioned in the list of Athenian possessions in Aristotle, *Ath. Pol.*

³ See Frickenhaus, *Athens Mauern*, pp. 14–29; and Wilamowitz-Moellendorf, *Arist. u. Athen*, i., pp. 194, 353, etc.

tion of the fortifications were carried on; Demosthenes was appointed (by the Pandionid tribe) to be one of the Ten Commissioners¹ entrusted with the superintendence of the work; and during his tenure of office, he contributed as much as a talent and a half from his own property for the service of the State.² It appears also that a system of drill and military discipline, much more regular than had hitherto been enforced in time of peace, was now instituted for those who were liable to service.

It was a far higher mark of public respect, that Demosthenes was chosen to deliver the Funeral Oration in honour of those who fell at Chæroneia, despite the bitter opposition of Æschines and other orators of the Macedonian party. "And the reason," he told Æschines, in the Speech on the Crown,³

you know well, but I will tell it you nevertheless. The People knew for themselves both the loyalty and zeal which inspired my conduct of affairs, and the iniquity of yourself and your friends. . . . And further, they thought that one who was to pronounce an oration over the dead, and to adorn their valour, should not have come beneath the same roof, nor shared the same libation, as those who were arrayed

¹ τευχονομοί. Whether he was appointed in 338 or 337 is uncertain.

² Æsch., in *Ctes.*, §§ 17, 31; Dem., *de Cor.*, § 113.

³ §§ 286-288. The extant Funeral Speech which purports to be the one delivered by Demosthenes on this occasion is a patent forgery.

against them; that he should not there join hands with those who with their own hands had slain them, in the revel and the triumph-song over the calamities of the Hellenes, and then come home and receive honour—that he should not play the mourner over their fate with his voice, but should grieve for them in his heart. What they required they saw in themselves and in me, but not in you; and this was why they appointed me, and not any of you. Nor, when the People acted thus, did the fathers and brothers of the slain, who were then publicly appointed to conduct the funeral, act otherwise. For since (in accordance with the ordinary custom) they had to hold the funeral feast in the house of the nearest of kin, as it were, to the slain, they held it at my house, and with reason; for though by birth each was more nearly akin to his dead than I, yet none stood nearer to them all in common. For he who had their life and their success most at heart, had also, when they had suffered what I would they had not, the greatest share of sorrow for them all.

The enemies of Demosthenes continued to show their hostility by attacking him on every conceivable ground.

All those who were interested in injuring me [he says¹] combined, and assailed me with indictments, prosecutions after audit, impeachments, and all such proceedings—not in their own names at first, but through the agency of men behind whom, they thought, they would best be screened against recognition. For you doubtless know and remember that

¹ *De Cor.*, §249.

during the early part of that period I was brought to trial every day, and neither the desperation of Sosicles, nor the dishonesty of Philocrates,¹ nor the frenzy of Diondas and Melantus, nor any other expedient, was left untried against me. And in all these trials, thanks to the gods above all, but secondarily to you and the rest of the Athenians, I was acquitted;

and he justly prided himself upon the public testimony thus given to his integrity and patriotism. Hypereides was assailed in the same way.² He was impeached by Aristogeiton for the illegality of the decree which he had moved immediately after the battle, and by which slaves were set free, aliens enfranchised, and those condemned by the law-courts restored to their privileges. The decree was in fact plainly illegal; but Aristogeiton's opposition had already had the effect of making it a dead letter,³ and the People accepted Hypereides' defence. "It was the arms of the Macedonians," he said, "that darkened my eyes. It was not I that proposed the decree; it was the battle at Chæroneia." It was plain that the honours paid to Philip and Alexander had been but the expression of an immense feeling of relief at the moment, in consequence of Philip's generosity, and that the real sentiment of the People remained true to Demosthenes.

After settling Phocis and Eubœa, Philip went to Megara, and thence to Corinth and the Pelo-

ACRO-CORINTHUS AND THE TEMPLE AT CORINTH
PHOTO BY ENGLISH PHOTO CO.

ponnese. The Megareans and Corinthians received him with honour; and a Macedonian force was left at Corinth to command the Isthmus. Most of the Peloponnesian peoples submitted to him readily, and some displayed an ignominious flattery. The Spartans, on the contrary, bluntly refused to acknowledge him, in spite of their military weakness at the time; and in consequence of this he overran Laconia, and gave considerable portions of it to the Argives and others of his allies, though he refrained from attacking Sparta itself. He next held a congress of representatives of the Greek States at Corinth, and announced his intentions with regard to the invasion of the Persian Empire. He was formally appointed commander of the Greeks against Persia; the contingents to be furnished by the several States for the campaign were settled; and a common synod of the Greeks was now established, with Corinth as its meeting place.¹ The Athenians were called upon to furnish a fleet and a troop of cavalry; and Demades proposed in the Assembly the fulfilment of this demand; but it needed the influence of Phocion to persuade the Athenians to agree to it, in spite of their obvious inability to refuse,—so strong was the sense of shame at the position in which they found themselves.²

¹ Note 1 at the end of the Chapter.

² Diod., XVI, lxxxix.; Justin, IX, v.; Polyb., XVI, xxxiii.; Plut., *Phoc.*, xvi.; Oxyrh., Pap., I, p. 25, col. iii., l. 3 ff.; Wilhelm, *Attische Urkunden*, p. 43.

It was probably at about this time that the aged Isocrates wrote his Third Letter to Philip, expressing his satisfaction that he had lived to see the dream of his youth on the point of realisation—the union of the Hellenes in a great expedition against Persia,—a satisfaction which was his sole consolation amid the trials of old age. Before the end of the year 338 he died.¹

The attacks of the Macedonian party upon Demosthenes and Hypereides in the law-courts were met by counter-attacks, in which Lycurgus was especially prominent. The first of his more notable victims was Autolycus, a member of the Council of Areopagus; upon whom the death penalty was pronounced for his withdrawal from Athens with his family and his money, when the news of Chæroneia had arrived, and the city had need of all her men and their resources.² Another was Lysicles, who had been general at Chæroneia, and was also condemned to death.³ So relentless and successful was Lycurgus in his political prosecutions, that one of his opponents said that he dipped his pen, not in ink, but in death, when he composed his speeches.⁴ His high personal character, and his known patriotism and incorruptibility, as well as his proved ability in practical administration, gave him great power; and the

¹ Note 2.

³ Diod., XVI, lxxxviii. See above, p. 387.

⁴ *Vit. X Orat.*, 841e.

moral earnestness and pathos of his oratory were sufficient to conceal his harshness towards his opponents and the exaggeration of his language. Hypereides also took part in the campaign of litigation. Demades had actually proposed to confer the citizenship of Athens, and the office of proxenus, or consul for Athens, upon Euthycrates, whose treachery had brought about the fall of Olynthus; and Hypereides indicted the proposal as illegal.¹ The result of the trial is not known; but it is difficult to suppose that Demades received the approval of the jury.

Early in the summer of 337 Demosthenes was chosen commissioner of the festival-fund for the four years beginning in July of that year. We do not know to what extent the distributions of festival-money were carried out during his term of office. It was a time of peace, and probably the surplus no longer went (as it had done during the war by his own enactment) into the war-chest, but was at least in part distributed as "theoric money." That Demosthenes should have agreed to this is not inconsistent with his insistence in earlier years upon the application of the surplus to defray the cost of war. He had never in fact condemned the distribution as bad in itself, but only as bad when it was treated as more important than the vital needs of the State; and he had admitted that if those needs could be met without suspending the distributions, they ought to be so

¹ Apsines, I, p. 388.

met.¹ That condition was now realised. The large expenditure of Lycurgus on public buildings shows that the financial condition of the city must have been tolerably prosperous; and we can be sure that popular opinion must have demanded the resumption of the distributions.

The popularity of Demosthenes and the general sense of his generosity and administrative ability were expressed by a decree proposed by Ctesiphon early in 336, that Demosthenes should be crowned with a golden crown in the theatre at the ensuing Dionysia, on the ground that he continuously spoke and acted for the best interests of the city. The decree ordered that the herald should proclaim before the assembled multitude (which would include strangers from all parts of Greece) that Demosthenes was crowned for his merit and his courage.² The decree was passed by the Council; but when it came before the Assembly, Æschines gave sworn notice that he intended to indict Ctesiphon for the illegality of his proposal. This declaration *ipso facto* suspended the operation of the decree, and Æschines instituted judicial proceedings; but before he could bring the case to an issue, events took a turn which made it very unlikely that the Macedonian party would win any success with the People or a popular jury for some time to come.

When Philip had made his arrangements at

¹ Olynth. III, § 19.

² Æsch., *in Ctes.*, §§ 49, 236, 246; Dem., *de Cor.*, § 244, etc.

Corinth for his projected invasion of Asia, he returned to Macedonia; and shortly afterwards a quarrel which had long been imminent came to a head. Philip had grown tired of his wife Olympias, the mother of Alexander, and in 337 he married Cleopatra, the niece of Attalus, one of his generals. At the wedding-feast an angry scene took place between himself and Alexander; Alexander departed into Lyncestis, and his friends were banished. But early in 336 a formal reconciliation took place; Olympias and Alexander returned to court; and it was arranged that Alexander's sister (also named Cleopatra) should marry Olympias' brother (her own uncle), Alexander of Epirus; while Attalus was sent to Asia in command (with Parmenio) of a large division of the army.¹ We may pass over certain other complications of the situation. Philip determined to celebrate the wedding of his daughter Cleopatra at Ægæ with great splendour; all the Greek States and neighbouring princes sent embassies bearing presents; and among them the Athenians sent a golden crown, and announced a decree which they had passed, undertaking to deliver up any one who had conspired against Philip's life and escaped to Athens.² But in the midst of the feast, Philip

¹ Plut., *Alex.*, ix., x.; Justin, IX, v.; Diod., XVI, xci., etc.

² Whether, as Beloch (*A. P.*, p. 239) supposes, this decree was passed in response to a demand by Philip for some fresh proof of the loyalty of Athens, in view of the strong anti-Macedonian feeling recently manifested there, there is no evidence to show.

was stabbed in the theatre, where the festal performance was about to begin, by an injured favourite named Pausanias, and died immediately. (July, 336.)¹ That Olympias was in the background of the plot is more than probable; the satisfaction which she did not hesitate to show lent colour to the suspicion; and the fact that Cleopatra, her rival, had just borne a son to Philip, who might some day contest the succession against Alexander, may have impelled her to desire Philip's instant death.²

Demosthenes received private intelligence of Philip's death, before the news was generally known in Athens; and it would be pleasant if we could draw a veil over his behaviour. He came before the Council with a joyful face, declaring that he had had a dream, in which Zeus and Athena had appeared to him, promising some great blessing to Athens. This was in itself nothing more than a piece of rather childish acting; but it was far more reprehensible that when the news was made public, he appeared in a festal garment, and with a garland on his head, though it was but seven days since the death of his own daughter; and that the People (doubtless following his lead) offered sacrifice in gratitude for good news and voted a crown to Pausanias. Phocion, to his credit, protested against this ungenerous exultation over the dead, and reminded

¹ Diod., XVI, xci.-xciv.

² Justin, IX, vii.; Diod., XVII, ii.

his countrymen that the army which had defeated them at Chæroneia was only diminished by one man.¹ The plea that Demosthenes' conduct was intended as a political demonstration—an invitation to other States to throw off the Macedonian yoke—is no excuse for the want of restraint and generosity displayed both by himself and the People.

It soon became plain how illusory was the idea that the death of Philip afforded an opportunity for the recovery of independence. Any such hope was excluded by the promptitude with which Alexander, recognised as King by Antipater and the army, took steps to secure his position. His half-brother Arrhidæus he treated indeed with consideration, and gave him a military command, first in Thrace and then as captain of the Thesalian cavalry. But all actual or possible conspirators or claimants to the succession were at once put to death; Cleopatra and her infant son fell victims to the ferocity of Olympias, though Alexander was not privy to her design; Attalus, Cleopatra's uncle, was assassinated in Asia Minor by Alexander's own orders—his hostility to Alexander was proved by the fact that the Athenians had opened communication with him;—and though Demosthenes chose to mock at the young King and to call him Margites, after a foolish character in an old poem,² he showed himself

¹ Plut., *Dem.*, xxii., *Phoc.*, xvi.; *Æsch.*, in *Ctes.*, §§ 77, 78; Diod., XVII, iii.

² Probably of the sixth century B.C.

entirely capable of managing his difficult inheritance. Within three months of Philip's death he marched southwards into Greece at the head of a large army. He first claimed the allegiance of the Thessalians, who resolved to join him in marching against Athens.¹ At Thermopylæ he was acknowledged by the Amphictyonic Council, and proclaimed commander-in-chief of the Greeks; and he expressed himself in friendly language to the Ambraciots and Acarnanians, who had seemed likely to give him trouble. He then proceeded on his way and encamped outside Thebes.

The Athenians now repented of their rashness, and, on the proposal of Demades, sent a deputation to apologise for their tardy recognition of him. At the same time they once more brought in their families and property from the country into the city.² Demosthenes himself was elected to serve on this embassy, but returned home after accompanying his colleagues only as far as Mt. Cithæron.³ Alexander at first addressed the envoys severely, but afterwards returned a gracious reply; and the People of Athens, relieved of their terror, voted him even higher honours than they had conferred upon Philip.⁴ After this Alexander convened a congress of representatives of the Greek States at Corinth (the Spartans still holding

² Diod., XVII, iv.; Justin, XI, iii.; Demades, *fr.*, etc.

³ Diod., *l.c.*; Æsch., *in Ctes.*, § 161; Dein., *in Dem.*, § 82; Plut., *Dem.*, xxiii.

⁴ Diod., *l.c.*; Arrian, I, i., § 3.

aloof); his leadership of the Greek forces was formally recognised, and a convention was drawn up, by which it was agreed that the several States were to be autonomous, and all forms of interference by one State with another were forbidden; the congress was to meet periodically; and it is most probable that a Macedonian force remained at Corinth.¹

In the spring and summer of 335 Alexander was occupied with campaigns in Thrace and Illyria, undertaken with a view to ensuring the obedience of the restless inhabitants of those countries during his expedition into Asia. These campaigns were completely successful. But his absence at so great a distance allowed the sentiment of independence to revive once more in Athens and Thebes; false reports of his death encouraged the patriotic movement, and may have been used as arguments for action by Demosthenes and Lycurgus.²

Demosthenes appears at this time to have hoped to secure his country's freedom by making common cause with Persia. The details of these negotiations are not clearly known to us. Rather earlier

¹ The authority is the speech "On the Treaty with Alexander," certainly not written by Demosthenes, but perhaps a genuine speech of one of the anti-Macedonian party, and later in date than 332, since in § 7 it mentions events in Lesbos in that year (Arrian, III, ii., § 6).

² So the fragment of Demades states; but the authority is bad, as the fragment is probably a late forgery (see Blass, *Att. Ber.*, III, ii., p. 272).

—just after Alexander's accession,—Demosthenes' overtures (which were perhaps made without the knowledge of the People) appear to have been rudely repulsed, and the King bluntly refused to send money to Athens.¹ But soon afterwards Darius, who had probably succeeded to the throne about the end of 336, seems to have realised the formidable character of Alexander's intentions, and to have sent a sum of three hundred talents, to be used against the Macedonian power.² This sum the People refused, as was correct; but it is stated to have remained in the hands of Demosthenes, to be employed for the object specified. That his enemies should afterwards accuse him of misappropriating it was a matter of course.³

It was with the connivance and aid of Demosthenes that the Thebans now received back some of their exiled fellow-citizens (who had been sojourning in Athens), and then killed two of Alexander's officers, restored the democratic constitution, and besieged the Macedonian garrison in the Cadmeia. On Demosthenes' proposal the Athenians resolved to send help to Thebes; an army and fleet were made ready, and an embassy was sent to Persia to propose a formal alliance.⁴ Demosthenes also sent large supplies of arms,

¹ *Æsch.*, in *Ctes.*, § 238.

² According to Plutarch, proofs of this were found by Alexander at Sardis in some letters written by Demosthenes, and in records by Persian generals of the amount sent.

³ *Æsch.*, in *Ctes.*, § 240; *Dein.*, in *Dem.*, §§ 10, 18; *Plut.*, *Dem.*, xx.

⁴ *Arrian*, II, xv.

bought with Persian gold, to Thebes. But the forces of Athens made no move. The People had already experienced the consequences of hasty action, and were apparently waiting to learn the truth about Alexander himself, and to discover what direction events were likely to take. Some of the Peloponnesian peoples also signified their sympathy with the revolt of Thebes; and some were persuaded by Demosthenes¹ to reject Antipater's demand for their help against the Thebans; but only the Arcadians sent any troops, and these marched no farther than the Isthmus. Had energetic action been taken by their friends, it is not impossible that the Thebans might have been successful, and Æschines afterwards² accused Demosthenes himself of bringing about the overthrow of Thebes by his miserliness; he would not even, Æschines says, advance the five talents for which the Macedonian mercenaries in the Cadmeia offered to betray the fortress. Deinarchus also accused him of refusing ten talents to Astylus, the leader of the Arcadian forces, and stated that others paid Astylus the money on condition that he should return home instead of going to the assistance of Thebes.³ These assertions are hardly credible. It is much more likely that it was the influence of Phocion, whose caution had more than once justified itself, that kept the Athenians from carrying their sympathy into action.

¹ Dein., *in Dem.*, § 19; *Vit. X Orat.*, p. 850.

² *In Ctes.*, § 240.

³ Dein., *in Dem.*, § 20.

But though it is conceivable that the Athenians might have enabled Thebes to free herself, it is not likely. With astonishing suddenness, Alexander himself appeared with his army outside the walls of Thebes. At first he attempted to win the Thebans by conciliatory overtures; but they had suffered much from the garrison in the Cadmeia, and were determined to resist to the last.¹ Within a few days the town was taken by storm, the forces of Thespiæ, Plataæ, Orchomenus, and the Phocians taking part in the assault, and giving vent to the hatred of many generations. Six thousand Thebans were slain in the massacre which followed, and over thirty thousand were taken prisoners. Alexander entrusted the decision of the fate of the conquered to the Greek peoples who had taken part in the siege. In accordance with that decision Thebes was razed to the ground, the temples and the house of Pindar alone being spared; nearly all the captives were condemned to be sold as slaves, and the remaining survivors of the Thebans were declared outlaws, to whom no Hellenic city must give shelter. The territory of Thebes was divided between Orchomenus and Plataæ, and a Macedonian garrison once more occupied the Cadmeia.²

The destruction of Thebes caused a paroxysm of horror and fear in the other Greek States.

¹ Arrian, I, vii.; Diod., XVII, ix.

² Arrian, I, ix.; Diod., XVII, xiv., etc.

Some of them sought to secure themselves by giving evidence of submission to the destroyer. The Arcadians put to death those who were responsible for the despatch of troops to the Isthmus; the people of Elis recalled from exile the banished partisans of the Macedonian domination; the Ætolians asked pardon of Alexander for the sympathy they had shown with the conquered; at Messene and at Pellene in Achaia tyrants were set up who favoured the Macedonians.¹ The Athenians were not slow to recognise their own special peril, owing to the part they had played in encouraging the revolt of Thebes. The news of the massacre reached them in the midst of the Eleusinian Mysteries. The feast was broken off, and the city was once more prepared for defence against the expected attack; large sums of money were contributed both by citizens and resident aliens²; and the fugitives from Thebes were warmly welcomed, in spite of the prohibition pronounced by the King and his allies.³ But once more the spirit of resistance was overcome by that of caution and alarm. On the motion of Demades, ten ambassadors were sent to Alexander with a message of congratulation, not only upon his safe return from Illyria, but also (if the accounts which have come down to us are correct) upon his punishment

¹ Diod., XVII, viii.; Arrian, I, x.; Speech on Treaty with Alex., §§ 4 ff., 10, 11; Paus., VII, xxvii., § 1.

² Dem., *de Cor.*, § 312; in *Phorm.*, § 38.

³ Plut., *Alex.*, xiii.

of the rebellious Thebans. It is not surprising that, on receiving this shameful despatch, the King threw it away and refused to speak to the envoys.¹ Subsequently, however, he offered to pardon Athens, if she would send away the Theban refugees who had taken shelter with her, and would deliver up to him the leaders of the anti-Macedonian party, among whom were named Demosthenes, Lycurgus, Polyeuctus, Charidemus, Ephialtes, and others.²

In the debate which ensued in the Assembly, Phocion, after being repeatedly called upon for his opinion, recommended that the demands of the King should be obeyed, declaring that the leaders whose surrender was in question had brought enough trouble upon Athens already, and that he himself would gladly sacrifice his dearest friend for the public good, after the example of the heroes of legend. It is said that the People shouted this proposal down. Demosthenes himself warned them that it was not well for the sheep to surrender the sheep-dog to the wolves; and that if they sold the orators to Alexander, they would be selling themselves into slavery, like merchants, who only display a few grains of corn as a sample, but thereby sell their whole cargo. Hypereides and Lycurgus also opposed Phocion's proposal.³ The

² Arrian, *l.c.*; Plut., *l.c.*, and *Dem.*, xxiii.; Diod., XVII, xv. The names are not the same in all the accounts.

³ *Vit. X Orat.*, 838d; Plut., *Phoc.*, ix.

resolution which was finally adopted was moved by Demades. (Diodorus states—we do not know on what authority—that he had been bribed by Demosthenes with a gift of five talents). It was determined to send an embassy to Alexander to ask pardon for the orators and generals whose surrender he had demanded, on condition that judicial proceedings should be taken against any who were guilty of misconduct; and to beg that the Theban exiles should be permitted to remain in Athens.

The embassy was headed by Phocion and Demades. The eloquence of the latter, and the outspoken advice which the former gave to the King, proved successful. In fact the sack of Thebes and the extirpation of one of the greatest cities of Greece was an act which was condemned by the moral sense of the Greeks generally; Alexander's own conscience was not free from misgivings about it; and he may have been glad to retrieve his character by showing clemency towards Athens. Accordingly he gave ear to Phocion's advice that he should turn his army against barbarians, not against Greeks; and reduced his demands to the requirement that Charidemus, one of the most irreconcilable opponents of Macedonia, should be expelled from Athens. With this the Athenians complied. Charidemus went to Persia and took service under Darius; and his example was shortly afterwards followed by Ephialtes and other Athenian generals. Alexander returned to Macedonia

with the knowledge that he had nothing to fear for the present from the Greeks.

A resolution of the Assembly entrusted the Council of Areopagus with the promised enquiry into the use made of gold from Persia for the assistance of Thebes, but the Council allowed the matter to drop¹; and although the enemies of Demosthenes repeatedly accused him of enriching himself with the money sent by the Great King, there is no evidence which deserves the name to show that he really did so; and the reception given to his defence in the Speech on the Crown, in which he claims to have been incorruptible from first to last, is scarcely consistent with the insinuations made by his enemies to the effect that his acceptance of large presents from Persia was matter of common knowledge.²

When we review the course of events from the battle of Chæroneia to the departure of Alexander to Asia, it is not easy to find sufficient reason for the severity with which the part played by Demosthenes has been criticised. It is plain that his own policy was one of resistance to the uttermost. That alone he considered to be worthy of the traditions of Athens. Whatever concessions to circumstances his fellow-countrymen, less courageous than himself, might make, he lost no opportunity

¹ Dein., *in Dem.*, § 10.

² Æsch., *in Ctes.*, §§ 173, 209, 259; Dein., *in Dem.*, § 70; Hyper., *in Dem.*, Col. 25; Plut., *Dem.*, xiv., etc.

which seemed to offer a chance of throwing off the yoke, and worked steadily, with Lycurgus, for the improvement of the defences, the increase of the efficiency of the army, and the strengthening of the financial resources of the city. It is also plain that he had the confidence of the People; and, conscious of this, he did not shrink from taking measures, which his country's interest seemed to demand, upon his own responsibility, whatever risk to himself they involved. Chief of these measures were the communications which he kept up during this period with Persia, with whom it was natural to make common cause against a common foe. It is true that his correspondence with Persia was, from a narrowly democratic point of view, a violation of the spirit of the constitution. "The Council and the Assembly," Æschines protested, "are passed over: despatches and embassies come to private houses, and those not from insignificant persons, but from the greatest Powers in Asia and Europe." Besides this, the responsibility for the expenditure of the money remitted from Persia to be used against Alexander was one which, when refused by the People, placed him in a very invidious position. Yet here again he took the risk of the charges of malversation which any one could bring, and which, though no one could prove them, could not, in all probability, be disproved without disclosing facts as to the use of this secret service money which had better be kept secret; and he was not afraid of being denounced as an

autocrat. There is no valid ground for believing that Demosthenes acted, during this period, otherwise than with a single eye to what he believed to be the interest and honour of his country.

But was his action wise, as well as patriotic? Was his statesmanship equal to his good intentions? Here there is more room for doubt. We cannot tell whether he did or did not rely too strongly upon the support of his countrymen,—whether he ought to have known that they would not really go to the help of Thebes. It was at least a generous error, if he attributed to them still the spirit which they had shown before the battle of Chæroneia. Nor can we now tell how far his belief that the moment was a favourable one for the revolt of Thebes was reasonable. Alexander, so far as any one knew, was in Illyria, and some said he was dead. His sudden appearance before Thebes was at least as great a surprise to every one else as to Demosthenes himself; and it does not seem right to blame him for falling into an error which no one else avoided. It is easy to find fault with him in the light of our later knowledge of Alexander's character, and his skill in making sudden movements with a rapidity paralysing to his enemies. But in 335 Alexander was not so well known, in spite of his prompt action in the previous year, as he became a few years later. On the whole, therefore, it does not seem just to denounce the course pursued by Demosthenes during these years either as dishonest or as unstatesmanlike;

and more credit is due to him than has always been given for the courage and consistency which he displayed.

NOTES TO CHAPTER XI

1. Wilhelm, *Attische Urkunden* (Sitzungsber. Akad. Wien., 1911), shows that the confederation formed at Corinth included far more States than has been generally supposed, and that it was much more minutely organised, especially as regards the representation (on a proportional basis) of the several peoples in the common synod. (He interprets in this sense *C. I. A.*, ii., 160, 184, and some other inscriptions.) It is disputed whether Philip intended only to free the Greek towns in Asia from Persian rule, or to conquer the whole or the greater part of Asia Minor, or to enter upon a series of campaigns comparable to those actually carried out by Alexander. There is no evidence on the point.

2. The picturesque story of Isocrates being so overcome with grief at the defeat of Chæroneia that he refused food, and so died a few days after the battle, must be taken to be disproved; and apart from this story there are no good grounds for disputing the genuineness of the Third Letter to Philip. (See Beloch, *Griech. Gesch.*, ii., p. 574 n.) The Letter is in keeping with Isocrates' known sentiments, and the style is also his.

3. Grote and others doubt the story of this embassy to Alexander; and it is not clear that Plutarch's statement can refer to any embassy before Alexander's demands were made. His language is very obscure (*e.g.*, it is not at all plain to what the words τὸ μὲν πρῶτον ψήφισμα refer). That he was much confused about this period is shown by the fact that in his *Life of Demosthenes*, chapter xxiii., he runs together events of which some took place before and some after the taking of Thebes. Arrian also may have transferred to an earlier stage in the proceedings a message really sent to Alexander *after* he had demanded the surrender of the orators. But it is only too probable that, whether before or after, some such message was sent.

CHAPTER XII

GREECE IN THE ABSENCE OF ALEXANDER

WE know little of the history of Athens during the first years of Alexander's absence in the East. But it can be gathered that it was Demades who took the lead in public affairs, sometimes holding financial, sometimes military offices, and receiving frequent presents from Antipater, whom Alexander had left in charge of Macedonia and Greece. The statue of Demades in bronze was even erected in the market-place in his lifetime, contrary to Athenian custom; and he was accorded the honour of perpetual maintenance in the Prytaneum at the expense of the state. He was supported by Phocion, who was continually re-elected general, and (unlike Demades) declined all presents from Antipater; and also by Æschines, though the activity of the latter appears to have been intermittent, and he lived for the most part the life of a prosperous landowner. Among his possessions were included estates which had once formed part of the territory of Thebes.¹ Demo-

¹ Dem., *de Cor.*, §§ 41 ff. 307 ff; Æsch., *in Ctes.*, §§ 216 ff.; Dein., *in Dem.*, §§ 101; Plut., *Phoc.*, xxx., etc.

sthenes seems to have given up for the time all attempt to influence the course of affairs. "When there happened," he says to Æschines,¹ "what I would had never happened, when it was not statesmen that were called to the front, but those who would do the bidding of a master, those who were anxious to earn wages by injuring their country, and to flatter a stranger—then, along with every member of your party, you were found at your post, the grand and resplendent owner of a stud—while I was weak, I confess, yet more loyal to my fellow-countrymen than you." Æschines and Deinarchus of course attribute his quiescence to cowardice.² If it is cowardice to recognise the temporary hopelessness of a cause, then Demosthenes is open to the charge; but that is not the ordinary meaning of cowardice; and when there seemed to be hope once more, Demosthenes acted energetically enough.

A modern historian³ has suggested that the reason for Demosthenes' retirement is to be found in a *rapprochement* between himself and Demades, as the result of which Demades in 335 proposed the motion which prevented the surrender of Demosthenes and others, while Demosthenes undertook not to attempt to disturb the Peace, or to interfere with Demades' acts. But there is no sufficient evidence of any such agreement, and the subsequent association of the two orators in the

¹ *De Cor.*, § 320.

² Æsch., in *Ctes.*, §§ 163 ff.; Dein., *l.c.*

³ Beloch, *Att. Politik.*, p. 243.

affair of Harpalus¹ does not prove it. It is more likely that Demades' motion was a compromise dictated by the strong popular feeling against conceding Alexander's demands on the one hand, and the danger of refusing compliance on the other; and that Demosthenes' abstinence from public affairs was no more than a wise concession to circumstances. Indeed, even after the supposed compact with Demades, Demosthenes joined Hypereides in opposing the proposal to furnish a contingent to Alexander (as the Athenians were bound to do)—a fact which of itself almost proves that the compact never existed.² On the motion of Phocion, twenty ships and a small corps of cavalry were sent to join Alexander's army³; but a number of Athenian volunteers took service in the cause of Persia. Whether there is any truth in the assertions of Demosthenes' enemies that he sought a reconciliation with Alexander through the mediation of a youth named Aristion, and with Olympias through Callias of Chalcis, is very doubtful.⁴ The statements made by Æschines and Hypereides when prosecuting him some years later are certainly not reliable testimony; especially as Æschines at least was particularly anxious to prove that Demosthenes had really taken the Macedonian side—a paradox which only falsehoods could support.

¹ See below, p. 461.

² *Vit. X Orat.*, 847 c, 848 e.

³ *Plut., Phoc.*, xxi.; *Diod.*, XVII, xxii.

⁴ *Æsch.*, in *Ctes.*, § 162; *Hyper.*, in *Dem.*, col. 20.

But though defeated, the anti-Macedonian party was not wholly inactive. In 334 Diotimus, one of the generals whose surrender Alexander had demanded, died; and Lycurgus proposed a decree in his honour.¹ In the same year when the Persian fleet appeared in the Ægean, it was permitted by the Athenians to revictual at Samos.² But Alexander could afford to overlook these pin-pricks, and it is clear that he desired to remain on good terms with Athens. He even went out of his way to pay her compliments. After his victory at the Granicus in 334, despite the fact that he had captured a number of Athenians among the enemy, he sent a present to Athens and three hundred suits of Persian armour to be dedicated in the Parthenon; with the inscription, "Dedicated by Alexander, son of Philip, and by the Greeks, except the Lacedæmonians, out of the spoils taken from the Barbarians of Asia."³

Until the battle of Issus in 333, Demosthenes, who continued to receive special intelligence from the seat of war, cherished hopes that Alexander would be defeated in Cilicia, and regarded with unconcealed satisfaction the apprehensions of Æschines and other friends of the King⁴; but after that victory, no room was left for such hopes.

In the spring of 331 the Athenians sent an embassy to Alexander, bearing him a golden crown in honour of his victories; and he then set free those

¹ *Vit. X Orat.*, 844 a.

³ Arrian, I, xvi., § 7.

² Arrian, I, xix., § 8.

⁴ Æsch. in *Ctes.*, § 164.

of their fellow-citizens whom he had taken prisoners at the Granicus, and had before refused to release¹; and in ordering the affairs of Greece, whether by his own commands or through his regent Antipater, he appears to have been careful to avoid, so far as Athens was concerned, any breach of the agreement between himself and the Greek States.

Thus the course of events in Greece was comparatively uneventful until after Alexander's crowning victory at Arbela in 331, and the death of Darius in the following year. Sparta alone acted in a manner which threatened trouble. The Spartan King Agis entered into communication with Persia, and in 333, supported by funds received from Persian admirals, made himself master of Crete. Consequently in 331, Alexander ordered a large fleet under Amphoterus to take action against Sparta, and sent money to Antipater to be used in reducing the Spartans to obedience.² At last, in 330, Sparta declared war against Alexander. The moment seemed favourable. Antipater was engaged in Thrace, where a revolt had broken out under the leadership of the Odrysian King Seuthes; and Memnon, one of Alexander's own commanders, seems for a time to have joined in it.³ Further, there was considerable discontent

¹ Arrian, I, xxix.; III, vi.; *C. I. A.*, ii., 741 f.

² Arrian, III, vi.; Diod., XVII, xlviii.

³ In this year the Athenians passed a decree in honour of Rhebulas, son of Seuthes (*C. I. A.*, ii., 175 b). This may mean

in Greece at the violation of the promises made by Alexander at Corinth in 336, through the arbitrary conduct of Macedonian commanders. Tyrants had been set up, favourable to the Macedonian domination, in Messene, Lesbos, and Pellene, though it had been promised that there should be no interference with the constitutions of the States. Macedonian captains had seized Athenian and other trading vessels and detained them at Tenedos, and the Athenians had actually equipped a fleet of one hundred ships under Menestheus, son of Iphicrates, to recover them; but (in accordance with Alexander's policy of conciliation towards Athens) they were released before active measures were taken. A Macedonian trireme had entered the Peiræus, nominally to demand permission for the building of small vessels there for the Macedonian fleet, but more probably in the hope of recruiting the fleet with Athenian sailors, though the request had been withdrawn when the Athenians objected.¹

Agis at first gained some slight successes. He defeated a Macedonian corps under Corrhagus; the people of Elis, all the Arcadians except those of Megalopolis, and all the Achæans except those of Pellene joined him; and he laid siege to Megalo-

that Rhebulas came to Athens to renew the old friendship between the city and the Thracian princes, and that the Athenians wished to show sympathy with the revolt of Seuthes. See Schäfer, iii., p. 200.

¹ Speech on Treaty with Alexander.

polis.¹ He also appealed to Athens for support, and the extant speech (wrongly ascribed to Demosthenes) "On the Treaty with Alexander" may have been delivered in one of the consequent debates in the Assembly, by a supporter of the Spartan King's request. It is not easy to ascertain with any certainty what part Demosthenes took in the discussion. According to Plutarch,² he began by asking the Athenians to assist Agis, but afterwards shrank back, finding that the People were not willing to join in the rising. It may be suspected that this is substantially the truth. That he did at first encourage the Spartans to hope for Athenian aid seems to be indicated by Æschines' statement³ that Demosthenes had claimed (though falsely) a share in instigating the Peloponnesian revolt, as well as a revolt in Thessaly, of which we know nothing more; though in the same speech—so Æschines states—he complained in a series of strained metaphors of the helpless condition into which his old opponents had brought the State, and so excused himself from carrying his support of the movement further. In another place,⁴ Plutarch states that the Athenians resolved to give the Peloponnesians the support of their fleet—perhaps they were influenced by Demosthenes' attitude at the outset—but that Demades cleverly parried this resolution, by pointing out that the

SPARTA
FROM A DRAWING BY H. M. PICKARD-CAMBRIDGE

only funds available for the expenditure which this policy would entail were those which he, as Theoric Commissioner, had saved for distribution at an approaching festival; and that the Athenians, rather than forego this distribution or contribute from their private property, were content to do nothing. In that case, Demosthenes might well complain that the sinews of the State had been cut by his opponents; and his withdrawal from his first attitude was dictated by simple prudence. It was of no use to encourage Sparta to expect support which the People would not give; and it is to Demosthenes' credit that he was not afraid to face the humiliation which such a withdrawal from his original position brought with it. Certainly nothing can be more despicable than the insincerity of Æschines and Deinarchus¹ in blaming him afterwards for doing nothing to help the Spartans against Macedonia, while at the same time they tried (as will be seen shortly) to fasten upon him some of the responsibility for the rising, and declared that his behaviour had brought discredit upon the city.²

The siege of Megalopolis was raised upon the arrival of Antipater with an army considerably outnumbering that of the Spartans and their allies. Agis gave battle, but was completely defeated, and himself slain.³ Antipater demanded

¹ Æsch., *l.c.*; Dein., *in Dem.*, § 35. ² Æsch., *in Ctes.*, § 254.

³ Curtius, VI, i; Diod., XVII, lxii., lxiii.; Paus., I, xiii., § 6; Justin, XII, i.; Plut., *Agis*, iii., etc.

fifty noble Spartans as hostages, and entrusted the sentence on the rebellious States to the congress of the Greeks at Corinth. But the Spartans appealed to Alexander, to whom the hostages were sent; and he pardoned all but the chief movers in the revolt, only commanding the payment of 120 talents to Megalopolis as compensation for the inconvenience caused to them by the siege.¹ A proposal was made by the enemies of Demosthenes to hand him over for judgment to the Amphictyonic Council, which was to meet in the autumn of 330, as though he had been in some way responsible for the disturbances; but the People refused to sanction this,² and showed thereby that though they might be unwilling to take any action which involved danger or sacrifice, their sympathy with the attitude of Demosthenes towards the Macedonian conqueror had not substantially altered.

Moreover, a notable trial of this same year (330) showed that the patriotic party was still active. Lycurgus prosecuted a certain Leocrates for desertion after the battle of Chæroneia. When the first report of the battle came, Leocrates had departed with all his belongings to Rhodes, to escape the ruin which seemed to be coming upon Athens, and had even reported at Rhodes that Athens was actually taken. He had subsequently settled at Megara as a resident alien, and engaged

¹ Curtius, *l.c.*; Diod. XVII, lxxiii.

² Æsch., *in Ctes.*, §§ 161, 254; Dem., *de Cor.*, § 322.

in trade on a considerable scale. In the year 331-0 he ventured to return to Athens; and Lycurgus, true to the stern principles which had led him to prosecute Autolycus, charged him with treason and demanded the death-penalty. The Speech of Lycurgus may still be read. He justly prides himself on his avoidance of all attempt to bring odium upon the accused by the introduction of matter irrelevant to the charge, and of references to the life of the prisoner, apart from the time of his offence. He spends all his energy in proving the enormity of the offence itself, judged by the standard of Athenian tradition; and a considerable part of the Speech consists of narratives of episodes in Athenian history, with long quotations from the poets. Though the language is exaggerated,¹ the tone of the Speech is earnest and patriotic; but nothing can quite justify the attempt to put Leocrates to death for an offence committed eight years before, by way of making a demonstration against the Macedonian supremacy. The votes of the jury were equally divided and Leocrates was acquitted. The trial illustrates the sharp division of political opinion in Athens, and the large amount of support upon which statesmen of the patriotic party could still reckon, at least when no sacrifice was entailed by their policy.

It was probably at about the same time² that a certain Euxenippus was impeached by Polyeuctus

¹ It was at any rate between 330 and 324 (Blass, *Att. Ber.*, III, ii., p. 64).

for giving bad advice to the People and receiving bribes from those who were acting against the interests of Athens. From the remains of Hypereides' speech for the defence, it is evident that of the arguments used by the prosecutor, one of the most formidable was derived from the prisoner's alleged flattery of the Macedonians, and of Olympias in particular. That such an argument should have been used is some indication of the state of popular feeling.

It may have been the failure of the Spartan revolt, with which Demosthenes was known to have sympathised, that led Æschines to renew the attack upon him, in the form of a prosecution of Ctesiphon, which he had allowed to drop six years before, when the news of Philip's death had revived the antipathy of the Athenians to Macedonian rule. It will be remembered that Ctesiphon had proposed in the Council, and the Council had resolved, that a golden crown should be bestowed upon Demosthenes in the theatre at the Dionysia, with a proclamation to the effect that he consistently spoke and acted for the true good of the People of Athens, and a commemoration of his public services; and that Æschines had indicted this as illegal. The indictment had had the effect of suspending the operation of the decree, which became void at the end of the year in which it had been moved. Some difficulty has been caused by the fact that in the Speech against Ctesiphon

Æschines clearly assumed that unless Ctesiphon was condemned, Demosthenes would be crowned at the next Dionysia; and certain historians have been led by this to suppose that Ctesiphon's decree had again been brought forward at the time of the Spartan rising, and that this led Æschines to repeat his indictment. But there is no evidence of this; and it seems more natural to suppose that every one assumed, as a matter of course, that if the jury acquitted Ctesiphon his motion would be formally reintroduced and carried into effect. Others have suggested that Demosthenes' own party, in the confident expectation of an acquittal, forced Æschines to proceed with his indictment, by threatening to prosecute him and demand the infliction of a fine upon him for having failed to carry out his sworn intention earlier. But of this also there is no evidence; and it is inconceivable that if such threats had been used, neither orator should have made the barest allusion to them.

It is much more likely that Æschines thought that an opportunity offered itself, in the temporary humiliation of Demosthenes owing to his failure in regard to the Spartan rising, of inflicting a crushing defeat on his rival; and that the revived prosecution of Ctesiphon is to be connected with the prosecutions of anti-Macedonian leaders in other States, perhaps with the approval of Alexander or Antipater. Demosthenes himself saw such a connection.¹ "At the same time as the irre-

¹ *De Cor.*, § 197.

concilable enemies of Athens, Aristratus in Naxos and Aristoleos in Thasos, are bringing the friends of Athens to trial, Æschines in Athens itself is accusing Demosthenes." But Æschines had under-estimated the strength of Demosthenes' position. The sympathies of the People, of whom the jury that would try the case would be representative, were still with Demosthenes and antagonistic to the Macedonian rule. Even before the trial began Æschines must have been conscious of this; for he actually attempted to enlist the good-will of the jury by alleging, as among the offences of Demosthenes, that he had let slip a number of occasions upon which he might have opposed the Macedonians, and by continually insinuating that Demosthenes' opposition to Macedonia had been a sham. The result of the trial was to afford Demosthenes his last and most signal triumph.

Æschines assailed the proposal of Ctesiphon on three grounds. He alleged first, that it was illegal to crown a statesman who had not passed the public scrutiny to which all public officials were liable on laying down office, and that Demosthenes, who at the time of the decree had been a Commissioner of fortifications and of the festival-fund, had not passed this scrutiny; secondly, that it was illegal to proclaim the crown in the theatre in the manner proposed; and thirdly, that the reasons which were given by Ctesiphon for the award of the crown, and which it was proposed to

proclaim, were false. It was a case in which the jury had not only to give the verdict, but also, if they condemned the accused, to fix the penalty. Never within the memory of man had any trial aroused such interest throughout the Greek world, and the court was thronged not only with Athenians, but with strangers from all parts of Greece.¹

The prosecutor addressed the court first. After an introduction, in which he emphasised the importance of punishing illegal proposals, in order to safeguard the constitution at a time when all constitutional principles were falling into neglect,² he proceeded at once to explain the technical grounds upon which he relied. He first cited the law which forbade the crowning of an official still liable to scrutiny, and defended it on the ground that a proposal to confer a crown, even if the reservation were made (which Ctesiphon had omitted to make) that the ceremony should not take place until after the scrutiny had been held, was bound to prejudice the issue of the scrutiny in favour of the recipient of the crown.³ He further replied to the argument which he expected Demosthenes to use, to the effect that the office which he held was not a public office in the technical sense, and that the public money of which he had charge was his own gift, for which he could not reasonably be called to account.⁴ It may be suspected that some of these passages (like some which occur

¹ *Æsch.*, in *Ctes.*, § 56.

² §§ 1-8.

³ §§ 9-12.

⁴ §§ 13-31.

later in the Speech) were inserted in it for publication after Demosthenes had spoken; but there can be no doubt that up to this point Æschines' case was a good one in point of law.

With regard to the second technical question, there is not much more doubt. There appears to have been a law which forbade the proclamation of a crown in the theatre, and ordered that a crown, if awarded by the Council, should be proclaimed in the Council-chamber, if by the People, in the Assembly. But there was apparently another law, regulating proceedings at the Dionysia, and forbidding proclamations in general at the festival, but permitting those crowns to be publicly conferred in the theatre which had been granted to Athenian citizens by other States, if the People gave permission. This law Æschines expected Demosthenes to wrest to his purpose, by arguing that coronation in the theatre was lawful if the People consented to it, and omitting to mention the restriction of this permission to the case of crowns conferred by other States. Accordingly he warned the jury against such sophistry, and protested against the notion that, with all the safeguards provided by the constitution against contradictory laws, such a contradiction as the anticipated argument implied would have been permitted to remain.¹

It is highly probable that here also Æschines was on firm ground. But both he and Demos-

¹ §§ 32-48.

thenes were well aware that the case would not be decided upon purely technical grounds, and though he dealt with these grounds fully, and (so far as we can judge) straightforwardly, the greater part of his Speech was devoted to the attempt to prove that the reasons which Ctesiphon had given for conferring the crown on Demosthenes were false, and that Demosthenes had not deserved well of the State.¹

After a brief reference to some of the early incidents of his rival's career, he divided his life into four periods—the first, the time of the Peace of Philocrates; the second, from the Peace of Philocrates to the renewal of the war with Philip; the third, the time of the alliance with Thebes; and the last from the battle of Chæroneia to the time of the trial. He attempted to show that in all four periods the policy of Demosthenes was corrupt and detrimental to Athens. We have considered these charges in reference to the events of the several periods in their place, and need not do so again. The most significant points in Æschines' attack are his insinuation that Demosthenes, in spite of his patriotic professions, had more than once acted in subservience to the Macedonian interest, and his attempt to prove, not only that Demosthenes had worked in harmony with Philocrates (in which there was some truth), but also that the alliance which he had negotiated with Callias and the Eubœans was dictated by sordid

¹ §§ 49-176.

self-interest; that he had claimed undue credit for the alliance with Thebes, and had granted the Thebans terms which were highly disadvantageous to Athens; that his policy at that time had led directly to the battle of Chæroneia and the destruction of Thebes; and that since these disasters he had pursued a cowardly, but not less mischievous, course. In a striking passage,¹ Æschines imagines the scene at Dionysia, if, when the orphans of those who had fallen in the service of their country were presented with a suit of armour by the State, Demosthenes, whose policy had made them orphans, was crowned with gold. At another point² he enumerates the qualities of a true "friend of the People," and finds that neither in his parentage nor in his character has Demosthenes any of these marks of the democratic spirit.

In the latter part of the Speech, Æschines first argued that whereas in old times rewards had been but rarely bestowed by the People, and had therefore been highly esteemed, the indiscriminate bestowal of honours was tending to diminish their value.³ He then returned to the topic of the importance of trials for illegal proposals, and declared that in cases where the proof was necessarily so straightforward, and required only the comparison of the incriminated proposal with the letter of the law, the accused ought not to be allowed to employ an advocate to mislead the

¹ §§ 152-158.² §§ 168-176.³ §§ 177-191.

jury—that Demosthenes, in short, ought not to be permitted to speak on behalf of Ctesiphon, or at least ought to be strictly confined to the legal questions at issue, and to the order of topics laid down by the prosecutor.¹ There follows in the Speech as we have it, a series of brief arguments in reply to those which Demosthenes was expected to use—most of them, in all probability, inserted after the trial, as a reply to arguments which Demosthenes actually had used—together with passages designed to arouse the animosity of the jury against Demosthenes himself or against Ctesiphon.² In conclusion, Æschines insisted upon the moral effect which the verdict of the jury must inevitably have, and besought them to put an end to the acquisition of excessive power by individuals and to the corruption of statesmen by Persian gold.³ A passage of real power ends with a sadly frigid and artificial appeal:

And now, O Earth and Sun and Virtue and Intelligence and Culture, whereby we distinguish the honourable from the shameful, I have given you my aid and have spoken. If I have accused him well, and as the charge deserves, I have spoken as I desired; if inadequately, as well as I could. Do you consider the arguments which I have used, and those which I have passed over, and give the vote which justice and the interest of the city require.

Had the reply of Demosthenes been lost, it may be that Æschines' Speech would have been given

¹ §§ 191-214.

² §§ 215-242.

³ §§ 243-259.

a higher place in the estimation of later ages than has usually been assigned to it. There are indeed in it passages of overwrought rhetoric and digressions of disproportionate length; yet his case is, on the whole, strongly presented, and its personalities do not transgress the limits which Athenian taste allowed. But Demosthenes' defence of Ctesiphon throws his rival's oration utterly in the shade. It is not only that, except upon the technical points, which no one present can have regarded as of serious importance, his case is overwhelmingly good; his Speech as a whole stands on a moral level which is incomparably higher. Certain reservations must doubtless be made, and those not unimportant. The replies to the several portions of Æschines' accusation are interspersed with passages of personal attack, which are almost savage in their vehemence, and are irrelevant to the main issue. Probably no such language was ever used by a politician about his opponents on any other occasion even in Athens, and the brilliant dramatic power which some of these passages show does not excuse their untruthfulness.¹ There are, moreover,—chiefly in those parts of the Speech which deal with the Peace of Philocrates,—misrepresentations of the truth, due to the orator's desire to disclaim all share in a transaction which was now discredited in popular estimation. On the points of law which Æschines' adduced, the

¹ Comp. esp., §§ 159, 198, 209, 257-264 (the famous account of Æschines's earlier days—probably almost entirely false), 308.

reasoning of Demosthenes can only be called sophistical and evasive. At best it could only be urged that the law had been broken before on many occasions, sometimes in Demosthenes' own favour. But when all that can be said in criticism of the Speech is fully allowed for, the greatest difference between it and that of Æschines remains. Æschines scarcely ever rises above the level of the party politician, the legal prosecutor, the personal enemy. His Speech reveals no breadth of outlook, no worthy ideal of national policy. Its whole effect is negative. It attacks one act of Demosthenes after another, cleverly indeed, but from the standpoint of no general principles, no far-sighted aims; and sometimes—more particularly in those passages in which it seeks to disparage the terms of the alliance with Thebes, or those in which Demosthenes is accused of favouring the Macedonian interest¹—a meanness and an insincerity are revealed which are utterly unworthy of a statesman.

Demosthenes, on the other hand, speaks in the tone of a statesman who has attempted wholeheartedly to carry out his own highest ideals, and those of his countrymen, and who can appeal with confidence to the best side of their national character, convinced that he has not interpreted it wrongly. He claims to be judged, not by the

¹ Demosthenes did not reply to the charges so far as they referred to the most recent times—doubtless because of the danger he would have incurred had he tried to prove expressly his hostility to Alexander.

familiar jargon about the "friend of the People," but by the highest standards of statesmanship.

Every investigation that can be made as regards those duties for which an orator should be held responsible, I bid you make. I crave no mercy. And what are those duties? To discern events in their beginnings, to foresee what is coming, and to forewarn others. These things I have done. Again, it is his duty to reduce to the smallest possible compass, wherever he finds them, the slowness, the hesitation, the ignorance, the contentiousness, which are the errors inseparably connected with the constitution of all city-states; while, on the other hand, he must stimulate men to unity, friendship, and eagerness to perform their duty. All these things I have done, and no one can discover any dereliction of duty on my part at any time.¹ . . .

Do you ask me [he demands] for what merits I count myself worthy to receive honour? I tell you that at a time when every politician in Hellas had been corrupted—beginning with yourself,—no opportunity that offered, no generous language, no grand promises, no hopes, no fears, nor any other motive, tempted or induced me to betray one jot of what I believed to be the rights and interests of the city; nor of all the counsel that I have given to my fellow-countrymen, up to this day, has any ever been given (as it has by you) with the scales of the mind inclining to the side of gain, but all out of an upright, honest, uncorrupted soul. I have taken the lead in greater affairs than any man of my own time, and my ad-

¹ § 246.

ministration has been sound and honest throughout all.¹ . . .

All these measures, men of Athens, will be found by any one who will examine them without jealousy, to have been correctly planned, and executed with entire honesty; the opportunity for each step was not, you will find, neglected or left unrecognised or thrown away by me; and nothing was left undone, which it was within the power and the reasoning capacity of a single man to effect. But if the might of some Divine Power, or the inferiority of our generals, or the wickedness of those who were betraying your cities, or all these things together, continuously injured our whole cause, until they effected its overthrow, how is Demosthenes at fault?² . . .

Not when my surrender was demanded, not when I was called to account before the Amphictyons, not in face either of threats or of promises, not when these accursed men were hounded on against me like wild beasts, have I ever been false to my loyalty towards you. For from the very first I chose the straight and honest path in public life; I chose to foster the honour, the supremacy, the good name of my country, to seek to enhance them, and to stand or fall with them.³

At every stage in the argument, Demosthenes puts the question, "What was the part which Athens was bound to play, if she was to be true to herself and her traditions?" and claims to have urged her to play that part.

Should she, Æschines, have sacrificed her pride and her own dignity? Should she have joined the ranks

¹ §§ 297, 298.

² § 303.

³ § 322.

of the Thessalians and Dolopes, and helped Philip thereby to acquire the empire of Hellas, cancelling thereby the noble and righteous deeds of our forefathers? Or, if she should not have done this (for it would have been in very truth an atrocious thing), should she have looked on, while all that she saw would happen, if no one prevented it—all that she realised, it seems, at a distance—was actually taking place? . . . What language should have been used, what measures proposed, by the adviser of the People at Athens (for that it was at Athens makes the utmost difference), when I knew that from the very first, up to the day when I myself ascended the platform, my country had always contended for pre-eminence, honour and glory, and in the cause of honour, and for the interests of all, had sacrificed more money and lives than any other Hellenic people had spent for their private ends: when I saw that Philip himself, with whom our conflict lay, for the sake of empire and absolute power, had had his eye knocked out, his hand and his leg maimed, and was ready to resign any part of his body that Fortune chose to take from him, provided that with what remained he might live in honour and glory? And surely no one would dare to say that it was fitting that in one bred at Pella, a place then inglorious and insignificant, there should have grown up so lofty a spirit that he aspired after the empire of Hellas, and conceived such a project in his mind; but that in you, who are Athenians, and who day by day in all that you hear and see behold the memorials of the gallantry of your fathers, such baseness should be found that you would yield up

your liberty to Philip by your own deliberate offer and deed.¹

So he argues above all in justification of the policy which led to the battle of Chæroneia:

Even if what was to come was plain to all beforehand; even if all foreknew it; even if you, Æschines, had been crying with a loud voice in warning and protestation—you who uttered not so much as a sound—even then, I say, it was not right for the city to abandon her course, if she had any regard for her fame, or for our forefathers, or for the ages to come. As it is, she is thought, no doubt, to have failed to secure her object—as happens to all alike, whenever God wills it: but then, by abandoning in favour of Philip her claim to take the lead of others, she must have incurred the blame of having betrayed them all. . . . But this was not, it appears, the tradition of the Athenians: it was not tolerable; it was not in their nature. From the beginning of time no one had ever yet succeeded in persuading the city to throw in her lot with those who were strong, but unrighteous in their dealings, and to enjoy the security of servitude. Throughout all time she has maintained her perilous struggle for pre-eminence, honour, and glory.² . . .

It cannot, it cannot be that you were wrong, men of Athens, when you took upon you the struggle for freedom and deliverance. No! by those who at Marathon bore the brunt of the peril—our forefathers! No! by those who at Plataæ drew up their battle-line; by those who at Salamis, by those who off

¹ §§ 66–68.

² §§ 199–203.

Artemisium fought the fight at sea; by the many who lie in the sepulchres where the People laid them—brave men, all alike deemed worthy by their country, Æschines, of the same honour and the same obsequies—not the successful or the victorious alone!¹

It is such sentiments that give its unique elevation to the Speech on the Crown. We have considered in the preceding chapter the justification of Demosthenes' policy at different stages in his career, and there is no need to repeat what has been said, nor to give a formal analysis of a Speech which every student of Demosthenes must read many times. The Speech began with an appeal to the gods; and the solemnity of its conclusion also is in keeping with the momentous character of the issue:

Never, O all ye gods, may any of you consent to their desire! If it can be, may you implant even in these men a better mind and heart. But if they are verily beyond all cure, then bring them and them alone to utter and early destruction, by land and sea. And to us who remain, grant the speediest release from the fears that hang over us, and safety that nought can shake.²

When the votes of the jury were counted, it was found that Æschines had not received one fifth of the total number. He thereby became liable to the penalties ordained by the law of Athens for malicious prosecution—a fine of 1000 drachmæ,

¹ § 208.

² § 324.

and certain civil disabilities.¹ He could doubtless have paid the fine and faced the loss of rights; but he could not face the spectacle of Demosthenes' triumph, and therefore withdrew from Athens. He first went to Ephesus, where he hoped to obtain a favourable reception from Alexander,² but the hope was frustrated by the news of Alexander's death in 323. Then, if not before, he went to Rhodes, where he passed most of the remainder of his life. He is said to have taught rhetoric there, reciting to his pupils the very speech with which Demosthenes had overthrown him; and to have met their admiration with the remark, "Ah! but you should have heard the beast himself!"³

The division of opinion in Athens, or rather, the conflict in the public mind between interested caution and patriotic sentiment, is illustrated by the few facts, apart from the doings of Alexander, that have come down to us from the period immediately following the acquittal of Ctesiphon. On the one hand, the party of non-resistance remained powerful. Phocion continued to be re-elected general.⁴ Demades retained his power in the Assembly.⁵ On the other hand, Lycurgus was

¹ Plut., *Dem.*, xxiv.; comp., *Dem.*, *de Cor.*, §§ 82, 266.

² *Vit. X Orat.*, 846 c.

³ *Ibid.*, 840 d.; Schol. on *Æsch.*, *de F. L.*, i., etc.

⁴ As he was general forty-five times, he must have been re-appointed almost every year.

⁵ Decrees of the years 329 to 323 in his name are known to us from *C. I. A.*, ii., 178, 193, 809, 811; cf. *Dein.*, in *Dem.*, § 101.

in control of public finance down to 326, and Demosthenes himself exercised important influence, since he was described by Hypereides as "director of State-affairs in general."¹ Deinarchus also complains of his power, and both Demosthenes and Demades figure as leading statesmen in the melancholy episode which comes before us, when next we are able to study the internal history of Athens in detail. It is probably to be inferred, not that any formal agreement had been made between the rival parties, but that statesmen of opposite views were able to exercise influence side by side, and to divide the administrative offices between them, because caution demanded that those who were of the Macedonian party should not be discarded, while the stronger popular sentiment was on the side of Demosthenes and Lycurgus. Probably there was little open friction; and it seems most likely that the political life of Athens was confined for some years to purely local questions, and that its most notable expression was the carrying out of the extensive building operations which had been planned by Lycurgus.² For the rest, the citizens went about their business, and enjoyed the distributions of festival-money, and the other pleasures of a time of peace.

In one respect only did serious trouble arise.

¹ ἐπιστάτης τῶν ὅλων πραγμάτων. Hyper., in Dem., col. xii.; comp. Dein., in Dem., §§ 5, 7.

² See von Wilamowitz-Moellendorf, *Aristoteles und Athen*, pp. 352, 353; Ferguson, *Hellenistic Athens*, pp. 8, 9, etc.

The price of corn rose about this time to a formidable height. The rise had begun even before the trial of Ctesiphon¹; and it became so serious that a special fund was formed for the purchase of corn; Demosthenes was made corn-commissioner, and contributed a talent from his own capital to the fund.² The position was made worse by the action of Cleomenes, Alexander's representative in Egypt, who made a "corner" in grain, and sold it at very high prices in Athens, transferring his cargoes elsewhere whenever the price fell.³ It is possible that a number of decrees proposed by Demosthenes, conferring honour upon various persons, are to be connected with their services in connection with the corn-supply. By these decrees,⁴ a certain Diphilus was given the privilege of maintenance in the Prytaneum, and the honour of a statue in the market-place; a resident alien, named Chærephilus, and his sons, were given the citizenship of Athens, and so were the bankers Epigenes and Conon; and statues of the princes of the Bosphorus, whose friendship with Athens was of long standing, were also erected.⁵ Demosthenes was accused of embezzlement during his tenure of office, but was acquitted.⁶ We hear also

¹ Dem., *de Cor.*, § 89.

² *Vit. X Orat.*, 845 c.

³ [Dem.], *in Dionysod.*, § 7, etc.; see Boeckh, *Staatsh.*, I, p. 119, etc.

⁴ Dein., *in Dem.*, § 43.

⁵ We do not, however, know the date of their erection, and it may have taken place earlier.

⁶ *Vit. X Orat.*, 845 e. Schäfer rightly observes that this notice cannot refer to the year 338; Æschines would not have

of an expedition under Miltiades in May, 324, to Western waters, to protect the Athenian trade in the West against Tyrrhenian pirates. The decree ordering the expedition was proposed by Cephisophon and supported by Hypereides,¹ and instructions were given for the founding of a colony on the Adriatic; but we know nothing of the fortunes of the expedition.

In 326 Lycurgus ceased to hold office. Whether he retired of his own accord, or whether he was rejected in favour of other candidates we do not know. The former alternative is possible; he was not living after 324, and his health may already have been failing. The other alternative is suggested by the fact that he was succeeded by a personal enemy, Menesæchmus, whom he had successfully prosecuted for impiety in a matter which had to do with the sanctuary of Delos.² It has also been suggested that the election of Menesæchmus marks the beginning of a division in the ranks of the patriotic party, since we afterwards find Menesæchmus associated with Hypereides in attacking Demosthenes; but there is no evidence to prove or disprove this supposition. Shortly before his death, Lycurgus caused himself to be taken to the Metroon and the Council chamber, to render an account of his long steward-

failed to notice any charge against Demosthenes of dishonesty in that year.

¹ *C. I. A.*, ii., 809 a.

² *Vit. X Orat.*, 843 d. A speech for the defence was included in antiquity among the speeches of Deinarchus.

ship. Menesæchmus, who alone ventured to bring any charge against him, entirely failed to justify his allegations, and the stern but capable and honest old statesman was carried home to die.¹

¹ *Vit. X Orat.*, 842 e.

CHAPTER XIII

THE AFFAIR OF HARPALUS AND THE LAMIAN WAR

FOR about two years (327 to 325) Alexander was engaged in his great expedition to India, and it was not until 324 that he returned to Susa. In his absence his deputies had governed as though they had expected him never to come back; and among the most shameless of these unfaithful viceroys was Harpalus, who, after a chequered career, had been left in command at Babylon. There he indulged in a long orgy of luxury and immorality. He sent to Athens for the famous courtesan Pythionice, and treated her as his queen; and after her death he buried her sumptuously, and erected statues of her both in Babylon and in Athens, where Charicles, the son-in-law of Phocion, acted as his agent in the matter. The "Tomb of Pythionice" was still to be seen in Plutarch's day on the road from Athens to Eleusis. Another courtesan from Athens, named Glycera, was soon installed in the vacant place, and the extravagances of Harpalus continued as before. Suddenly it was announced that Alexander was on his way back from India. Harpalus fled from Babylon without

delay (in the winter of 325-4), taking with him a force of six thousand mercenaries, and the sum of five thousand talents out of Alexander's treasure, which had been in his charge.¹

He first sailed to the coast of Attica with thirty ships, and anchored off Sunium, expecting that the People of Athens would receive him and join forces with him in a revolt against the Macedonian power.² There was some ground for his expectations, since he had influential friends in Athens, and in return for presents of corn which he had sent, the Athenians had already granted him the citizenship. But Demosthenes, who doubtless saw that there would be great danger in such an alliance, and that the assistance of Harpalus was not likely to be the means by which Athens could secure freedom, persuaded the People to reject Harpalus' offer (tempting as it must have been at first sight) to place his ships and men at the disposal of the Athenians.³ Demosthenes' policy on this occasion is very like that which he had pursued in regard to the Peace of 346—a policy of refusing to break the Peace when the chances of success were too small for a prudent statesman to act upon. The general Philocles, who had charge of Munychia and the Peiræus, was ordered to prevent Harpalus from landing, and undertook upon oath to do so.⁴

Thus baffled, Harpalus departed with his ships

⁴ *Vit. X Orat.*, 846 a; Diod., *l.c.*; Deinarch., in *Philocl.*, § 1.

to Tænarum, and landed his men there. He then returned with a single ship to the Peiræus, bringing with him a very large sum of money. Philocles, probably induced by a bribe, failed to prevent his entrance, and he now supplicated the People for aid, at the same time distributing bribes where he thought they would be effective.¹ The less cautious members of the patriotic party, and among them Hypereides, wished to take this opportunity of declaring war, being evidently convinced (perhaps by the statements of Harpalus himself) that many of the oriental satraps were ready to rise against Alexander, and would already have done so, had Athens not repelled Harpalus.² But this policy was opposed by Demosthenes, who, as before, thought the occasion unfavourable for the renewal of the war, and by Phocion, who spoke so plainly in regard to Harpalus' methods as to force him to cut short his distributions of money.³ At the same time the surrender of Harpalus was demanded by Antipater and Olympias, and also by Philoxenus, Alexander's commander in southern Asia Minor. Philoxenus came personally to Athens for the purpose, and his advent caused the Athenians great alarm, of which Demosthenes took advantage. "If," he asked the People, "you cannot look a candle in the face, how will you face the sun when he appears?" (There is in fact

reason to think that Alexander was just now contemplating a great expedition against Athens, in consequence of a rumour that had reached him that Harpalus had been well-received there.¹) Finally it was resolved, on Demosthenes' proposal, not to surrender Harpalus (for probably public opinion would not have permitted this), but to keep him in confinement, and to take charge of the money which he had brought, until Alexander should send a fully accredited representative to take both over.² Demosthenes also had the question put directly to Harpalus by Mnesitheus, how much money he had brought with him.³ Harpalus named seven hundred talents as the sum; but the amount actually deposited next day in the Acropolis was found to be no more than 350 talents. Demosthenes, who was one of those charged with the duty of conveying the money to the Parthenon, failed to inform the People of the exact sum deposited.⁴ The probable reason for this omission will presently appear; but it soon became known that a very large sum was missing.

Demosthenes next appears to have carried two proposals—first, that those who had received

¹ Curt., X, ii. The rumour is alluded to in the fragments of a satyric play named *Agén*, performed before Alexander, probably at Susa, early in March, 324; Athen., XIII, p. 596.

money from Harpalus should be allowed to escape all penalty if they restored it¹; and secondly that the Council of Areopagus should enquire into the whole affair, and should report to the People the names of those who had taken presents from Harpalus, with a view to their prosecution.² Just at this moment, Harpalus succeeded in escaping from prison—with whose aid or connivance there is no evidence to show³—and returned first to Tænarum, and thence sailed to Crete, where he was murdered by one of his own captains, Thibron of Sparta.⁴ The Council of Areopagus took their time before setting seriously to work at the investigation entrusted to them, and in the meantime the situation became further complicated.

Before Alexander had set out on his march to India in 327, he had been greeted as a god through the flattery of the sophist Anaxarchus—or it may have been Cleon—and divine honours had been paid him; though Callisthenes, the nephew of Aristotle and himself a distinguished historian, had strongly protested, and in consequence had shortly afterwards been put to death on a charge of complicity in a conspiracy of the royal pages.⁵ Early in 324 Alexander demanded that the Greek

States also should recognise his divinity.¹ Probably the smaller States complied without making any difficulties; at Megalopolis, for instance, a shrine was dedicated to Alexander, and was seen several centuries afterwards by Pausanias.² Even the Spartans gave a contemptuous assent, agreeing to "let Alexander be a god if he liked."³ At Athens the spirit of resistance was stronger. Lycurgus, who was priest of Erechtheus, asked the indignant question, "What sort of a god is he, at whose temple a man must purify himself on coming out instead of on going in?"⁴ The demand was opposed by Demosthenes, who declared that the city should worship only the traditional gods.⁵ It was also opposed by Pytheas, an orator who was at present on the anti-Macedonian side⁶; and in spite of Demades' warning to the Assembly,⁷ "to take care lest in guarding heaven they should lose earth," the People refused to submit to the demand.

But with it came another and a more serious command from Alexander, which Demosthenes was at first prepared to resist even at the risk of war.⁸ This was an injunction issued to all the

Greek States that they should receive back those who had been banished from their several cities, with the exception of those who were under a religious ban. The command was given by the King partly (so Diodorus explains) "for the sake of his reputation." It was not creditable to his rule that many thousands of his subjects should be homeless exiles; still less, that his dominions should be overrun by lawless mercenaries or brigands, such as many of the exiles became. But the explanation was partly that "he desired to have a large number of persons in each State attached to himself, as a security against the revolutions and risings of the Greeks." On the other hand, the order was a direct breach of the convention of Corinth, by which the King had undertaken not to interfere with the internal affairs of the Greek cities; though it might be argued that Alexander the god could claim authority to supersede the terms of any mere human convention; and from this point of view, the combination of the two demands was an ingenious stroke of policy. Even apart from the divine claims, the injunction was an announcement that Alexander intended to stand above the internal party-divisions of the several States. But the fulfilment of the injunction was bound to lead to serious internal disturbances in each city—the more so because exile was generally due to political causes. The Athenians had special reasons for apprehension, since they had driven out a number of the inhabitants of

Samos¹ to make room for Athenian settlers, and the King's order would compel them to restore these. In any case the order was bound to evoke the strongest resentment in Athens. It was virtually a demand that she should renounce her internal autonomy; and it was in accordance with Demosthenes' strongest political sentiments that he should think it right to resist it to the death. There is thus no reason to have recourse, for an explanation, to the motive suggested by his enemies,² that he desired to get up a war in order to divert the attention of the People from the enquiry entrusted to the Council of Areopagus, from which he had reason to apprehend danger.

The popular feeling was on Demosthenes' side, and he was appointed chief of the official representatives sent by Athens to the Olympian festival in July or August, 324, to which Nicanor of Stageira had been sent by Alexander to proclaim the King's pleasure to the assembled Greeks.³

In anticipation of Nicanor's proclamation, more than twenty thousand of the exiles affected by it had gathered at the festival, and they received it with great demonstrations of joy, which were not shared by the Athenians or the Ætoliens; for, just as the former had occupied Samos, so the latter had

¹ Perhaps as recently as 326. *C. I. A.*, ii., 808 a, records the despatch of a fleet to Samos in that year.

² *E. g.* Hyper., *l. c.*

³ Diod., XVIII, viii.; Justin, XIII, v.; Curt., X, ii.; Hyper., *in Dem.*, col. xviii.

occupied Œniadæ, and expelled the inhabitants of the town; and they now found themselves required to restore it to them.¹ Nicanor was instructed not only to proclaim the restoration of exiles (except those from Thebes, whose return to their native land was explicitly forbidden²), but also, it would seem, to forbid the federal meetings of the Achæans, Arcadians, and Bœotians; and Antipater was ordered to enforce the King's decree by arms upon those cities which proved disobedient. Demosthenes does not appear to have expressed the feelings of himself or his fellow-citizens in any conspicuous manner during the festival; but it is mere malice on the part of Deinarchus³ to treat him as a traitor to his country, on the ground that he was seen speaking to Nicanor. The representatives of the most hostile powers may have the best of reasons for meeting one another, and it may even be that Demosthenes postponed the outbreak of a crisis by diplomatic conversations.

But whatever Demosthenes' conduct at Olympia,⁴ his visit seems to have caused him to regard the situation as more dangerous than he had at first believed. He remained firm indeed as regards the restoration of exiles; but he withdrew the impeachment which he had preferred against the orator Callimedon for associating with the Athenian exiles, who were now assembled at Megara and were

⁴ Note 2.

THE TEMPLE OF ZEUS AT OLYMPIA
PHOTO BY ALINARI

demanding readmission to Athens¹; and he also withdrew his opposition to the recognition of Alexander's divinity. "Let him be son of Zeus," he said, "or, if he prefers it, son of Poseidon, for all I care." He doubtless believed that if the Athenians gave way upon this point, which was of comparatively little political importance, Alexander might be content to ignore their neglect of the more serious injunction.² In consequence of this, Demades now proposed that Alexander should be added as a thirteenth to the twelve Olympian gods, under the title of Dionysus, whose mythical home at Nysa Alexander fancied himself to have discovered; and that a temple should be erected to him³; and this decree appears to have been accepted, since Hypereides, a year or so later,⁴ alluded scornfully to this payment of divine honours to men.

A number of embassies proceeded about this time to Babylon, where Alexander received their congratulations and homage (accompanied by golden crowns) early in 323; he also considered the political and other questions which they submitted to him, and among them, their requests in regard to the return of the exiles.⁵ It is probable that

¹ Dein., *in Dem.*, §§ 58, 94. Another Athenian, named Polyeuctus, was also prosecuted, though not by Demosthenes; but was able to prove that he had gone to Megara to visit his mother.

² Dein., *in Dem.*, § 94; Hyper., *in Dem.* col. xxxi.

³ Val., *Max.*, VII, ii., E. 10; *Ælian.*, *Var. Hist.*, V, xii.; Athen., VI, p. 251 b; Diog., L., VI, lxxiii. ⁴ Hyper., *Epitaph.*, col. viii.

⁵ Arrian, VII, xix., xxiii., seems to distinguish two series of embassies; Diod., XVII, cxiii., groups all together.

the Athenians sent envoys among the rest; for we are told that Alexander at this time restored to the Greeks the statues and other works of art which the Persians had carried off at the time of Xerxes' invasion of Greece, and among others restored to the Athenians the statues of Harmodius and Aristogiton, who had liberated Athens from tyranny in 510. But he probably refused to give way as regards the restoration of exiles, since various inscriptions of the time allude to the return of the banished to their several cities—to Samos among others.¹ Whether he insisted upon the reception into Athens of those who had been expelled we do not know.

Before the embassies were received at Babylon, the Harpalus affair came to an issue. It is plain that public excitement over the matter had been growing; the apprehension of danger from Alexander had also increased; and there was much impatience at the long delay of the Council of Areopagus in coming to a conclusion. They had indeed instituted a search in the houses of suspected persons, but without result. Demosthenes was openly charged by his enemies with receiving money from Harpalus; and in self-defence proposed a decree ordering an enquiry by the Council of Areopagus into the charge against himself, declaring himself ready to submit to the penalty of death if he were found to have taken the money.

¹ *C. I. G.*, ii., 2166, 2671, 2672, etc., and *Ditt. Syll.*, (Ed. 2) 162.

Philocles did the same.¹ That Demosthenes himself gave evidence before the Council appears from the circumstance that Deinarchus accused him of committing perjury before that body. At some point in the course of the proceedings, two persons, a father and son, were condemned to death and executed, on the proposal of Demosthenes; it is conjectured that they may have been the watchmen who had been set to guard the treasure.² Such was the nervousness of all parties, that those who had actually taken money from Harpalus were the first to accuse others of having done so, in the hope of saving themselves.³ Even Hypereides, who was above suspicion, was mentioned by the comic poet Timocles (probably at the Dionysia in March, 324) as having received money, along with Demosthenes, Moerocles, Demon, and Callisthenes. At last, six months after the enquiry had been ordered,⁴ the Council reported that Demosthenes had received twenty talents of the lost money, Demades six thousand gold staters (also equivalent to about twenty talents), and that various sums had been accepted by Philocles, Cephisophon, Hagnonides, Aristonicus, Aristogeiton, and Charicles.

In consequence of this report, the Assembly

¹ Dein., in *Dem.*, §§ 8, 47, 82, 83, 86, etc.; in *Philocl.*, §§ 1, 2. Demosthenes perhaps trusted that this Council would be favourably inclined to him, as on some former occasions.

² Dein., in *Dem.*, §§ 8, 62, 83.

³ Plut., *Dem.*, xxv.; *Phoc.*, xxi.

⁴ Dein., in *Dem.*, § 45.

appointed ten orators to prosecute the accused on behalf of the State. Among the ten were Hypereides, Pytheas, Menesæchmus, Procles, Stratocles, and Himeræus.¹ Of these Menesæchmus was the former assailant of Lycurgus; Pytheas, though he had opposed the recognition of Alexander's divinity, was shortly afterwards in the pay of Antipater²; Stratocles had been described by Demosthenes³ as the most plausible scoundrel in the world. What was Hypereides doing in conjunction with such men, and in antagonism to Demosthenes? Probably the two had been drifting apart for some time. The patient moderation of Demosthenes, who was waiting for a really favourable moment before renewing the struggle for freedom, and the fact that he had been content to divide the administrative offices with Demades and his friends, may gradually have alienated Hypereides; the original refusal of Demosthenes to accept the overtures of Harpalus may have seemed to Hypereides to be a sacrifice of a unique opportunity,⁴ and the charge of bribery and embezzlement may have seemed to be a convenient way of getting rid of so cautious a leader. It was perhaps for similar reasons that Hypereides attacked Hagnonides and Aristonicus, who had also been opponents of the Macedonian power.

The charge against Demosthenes was tried

¹ Dein., *in Dem.*, § 1; *Vit. X Orat.*, 846 c.

³ *In Pantænēt.*, § 48 (*circ.* 346-5 B.C.).

⁴ Note 3.

first. The speech of Stratocles, in which the proofs of the charge are said¹ to have been given, has not come down to us; and we are therefore ignorant what the nature of these proofs was. The Council of Areopagus had only reported its conclusions, not the grounds of them.² The speech of Deinarchus, composed for one of the prosecutors—probably Himeræus,³—followed that of Stratocles. The speaker does not offer a vestige of proof of any kind, being apparently content with the findings of the Council. On the other hand, he tries by every means to rouse prejudice against Demosthenes, by recalling the destruction of Thebes and other disasters and attributing them to him, and by accusing him of taking bribes on a number of former occasions. But the meanest arguments, in a speech brimming over with malice, are those which accuse Demosthenes of having all along been working in the service of Macedonia, from the time of the Peace of Philocrates onwards, and of having thrown away every opportunity of opposing Philip and Alexander. (The arguments of course show that the prosecutors were aware that the feeling of the jury would be strongly anti-Macedonian.) The speaker further urged the jury to remember that the eyes

¹ Dein., *in Dem.*, § 1.

³ Blass, *Att. Ber.*, III, ii., p. 310. Haupt thinks that the speaker was Menesæchmus. Whoever he was, he had himself been denounced for corruption by Pistias, an Areopagite, but had succeeded in clearing himself.

of the world were upon them, and that it was important to punish corruption in the case of eminent men above all. What, he proceeded to ask, would happen if Alexander demanded to be paid the money brought by Harpalus? Would Demosthenes expect the Athenians to go to war, in order that he and others might retain what they had stolen? The Speech is marked throughout by vehement and impetuous but overwrought rhetoric; by way of additional insult, passages not only of *Æschines'* but of Demosthenes' own earlier orations are used with very little alteration against Demosthenes himself; and, whatever were the merits of the case, there is no public oration by a Greek orator which stands on quite so low a level as this.

At a later stage in the trial Hypereides spoke, and some not inconsiderable fragments of his speech are known to us. Hypereides like Deinarchus regards the finding of the Areopagus as sufficient evidence in itself, particularly as Demosthenes himself had proposed that its verdict, if given against him, should be conclusive. He asks whether it is likely that it was for nothing that Demosthenes had taken no proceedings against the custodians who had let Harpalus go, when it was he himself who had moved that he should be kept in custody? or that Harpalus would have bribed lesser men, and passed over Demosthenes, the manager of the whole affair? He also brings up against Demosthenes the scandal about the Persian gold, and the failure to help Thebes against Alexander.

What is more interesting is that Hypereides gives us the only information we have as to the line of defence which Demosthenes was expected to adopt, and which had no doubt become known before the trial. Demosthenes had demanded a detailed account of the sums which he was alleged to have received, showing from whom he had received them, and where—a demand upon which Hypereides throws scorn, saying that it is treating the Council's report as though it were a banker's account; but which seems in itself not unreasonable. He had also declared that the report of the Council of Areopagus was false, and that the Areopagites desired to get rid of him, by way of doing a favour to Alexander. The latter assertion is very likely to have been so far true, that the danger which the Athenians apprehended from Alexander's indignation may have been strongly urged upon them, and may have forced them to make a report, when they had probably hoped to let the matter drop, as they had done in the case of the "Persian gold." But what is of most importance is the statement of Hypereides that Demosthenes had made all his subsequent denials of the receipt of the money ineffectual, by having at first admitted that he had taken the money and by having tried to justify himself for doing so, on the pretext that he had borrowed the money for the festival-fund.¹

¹ The interpretation of *προδεδανεισμέρος* (Hyper., *in Dem.*, col. x.) given by Holm and others, who take it to mean that Demosthenes had advanced twenty talents of his own to the

(His friend Cnosion also hinted that if pressure were exerted, the result would be the revelation of a state-secret, and would be detrimental to the public interest.¹) This defence Hypereides described as bringing discredit upon the People, by letting it be thought that they would apply Harpalus' money to their own public purposes. The verdict of the court was against Demosthenes. It was open to them either to condemn him to death, or to fine him ten times the amount alleged to have been received by him.² Instead of doing either, they inflicted a fine of fifty talents, committing him to prison until it should be paid.

The question of the guilt or innocence of Demosthenes has been, and still is, keenly disputed. It is impossible to discuss all the considerations which have been urged on either side; many of them are plainly invalid; but it may be well to state briefly the conclusions to which the very slender evidence seems to point. It can scarcely be denied in the face of Demosthenes' own admission (unless Hypereides is telling a downright falsehood) that Demosthenes received the money. It appears probable that he did not take it as a bribe from Harpalus. If he had done so, he could hardly have proposed to take Harpalus into custody and

festival-fund, and had repaid himself out of Harpalus' money, cannot be extracted from the Greek, though it may represent Demosthenes' plea.

¹ *Ibid.*, col. xiii.

² *Ibid.*, col. xxiv.; Dein., *in Dem.*, § 60.

put his money into safe keeping to be restored to Alexander. Plutarch indeed¹ tells a story to the effect that though Demosthenes had refused Harpalus' offers at first, yet, when Harpalus was in custody and the money being counted, he was moved with admiration of a golden cup, finely worked, which was among the treasure; and that the same night Harpalus secretly sent him this cup, together with twenty talents. Next day, when he was called upon to speak in the Assembly, and expected to maintain his former attitude towards Harpalus, he pretended to be suffering from loss of voice, and appeared with his throat elaborately muffled up; but the story leaked out; he and his friends thought it well to get Harpalus away from Athens, to prevent any possible disclosures; and the Areopagus then instituted the domiciliary search which has been mentioned. But if this tale were true, it is almost inconceivable that it should not have been alluded to in the speeches for the prosecution. Deinarchus would never have failed to take full advantage of so picturesque a story. Nor does Hypereides mention it when he alludes to the escape of Harpalus. Moreover, we are told that Harpalus' steward was captured by Philoxenus at Rhodes, and told him the names of the statesmen to whom Harpalus had given money, and that Demosthenes' name was not among the number.²

Demosthenes then did not receive the money

¹ Plut., *Dem.*, xxv.

² Paus., II, xxxiii., § 4.

from Harpalus, but must have appropriated it after the treasure had been transferred to those appointed by the Assembly to take charge of it, of whom he was one. Further it is quite possible that his statement that he had taken it "for the theoric fund" was true, though he cannot have formally transferred it to the fund; for then it could have been proved by the accounts of the fund. He was evidently apprehensive of war with Alexander. In case of war, the theoric fund would almost certainly be called upon to provide money for military purposes; and it is far from improbable that Demosthenes hoped to lay the foundations of a reserve out of the money taken from Harpalus; just as he had taken Persian gold to help Thebes. If this was so, he was at least not guilty of an act of theft for his own personal aggrandisement, however indefensible his action may have been. Indefensible, of course, it was. The money was the property of Alexander; the People had resolved that it should be kept in the Acropolis until Alexander sent for it, and had entrusted to Demosthenes, among others, the execution of this decree: the money was clearly not available for the public purposes of Athens. But it cannot be doubted that if war with Alexander had broken out, the People would have sanctioned the use of Harpalus' treasure for the defence of Athens; Deinarchus assumed that this was so¹; and it is not to be supposed that the Athenians felt so

¹Dein., in *Dem.*, §§ 64 ff.

strongly about Demosthenes' action in taking the money prematurely for the use of Athens as modern judges of the case would feel. The comparatively light penalty inflicted indicates this. Demosthenes then was guilty of an action based on the same principle, and directed towards the same end, as his acceptance of Persian gold, but less justifiable, because it involved a breach of faith. When, however, that is admitted, his fault still remains far less ignoble than his critics, ancient and modern, would have us believe. There is at least no sufficient reason for supposing that he was influenced by corrupt motives, or that he aimed at his own personal gain; and we are justified in preferring an interpretation of his action, which, while it does not acquit him of a certain unscrupulousness as to means, is consonant with the patriotic aims which he pursued throughout his career.

The penalty inflicted was, as we have said, light in comparison with that which the laws allowed. But in itself a fine of fifty talents was a heavy one. No doubt the court took into account not merely the appropriation of the money by Demosthenes, but also his failure to report the exact sum deposited in the Acropolis¹; though there may be some ground for his complaint² that he was treated more harshly than the rest because his case was the first to be tried, and that others who made precisely the same defence as he, got off unpunished.³

¹ *Vit. X Orat.*, 846 c.

² *Dem., Ep.*, ii., § 15.

³ It must, however, be remembered that he occupied a position

However that may be, he was unable to pay so large a sum, and was cast into prison. But before many days he felt the hardships of the prison to be greater than his age and health could endure, and contrived to make his escape. Plutarch tells the story¹ that when Demosthenes was a little way from the city, he saw some of those with whom he had had differences following him, and tried to hide; but they called to him that they had followed him to bring him money for his journey, and urged him to bear his misfortune cheerfully; whereupon he burst into lamentation at his exile from a city where even his enemies were kinder than any friends he would find elsewhere. As he left the city, so Plutarch also tells us, he had cried aloud to Athena Polias, "O Lady of the City, why dost thou delight in three of the most cruel beasts—the owl, the snake, and the People?" and when young men came to talk to him during his exile, he dissuaded them from entering upon a political career, declaring that if he had a fresh start and two roads lay open to him, the one to the platform and the Assembly, the other straight to death, then, knowing, as he did, all that a political career involved—fears, jealousies, slanders, struggles,—he would take the road that led straight to death. He passed his time for some months partly in Ægina, partly at Trœzen; but he found Trœzen

of special influence and responsibility, and that less important persons might well be more leniently treated.

¹ Plut., *Dem.* xxvi.

an unsafe refuge, and moved to the island of Calauria, from which (as from Ægina) he could see Athens and the Attic coast.¹ Hence he wrote the Second Letter ascribed to him, in which he pleaded earnestly with the People for restoration to Athens. He recalled his long career of public service, and claimed the same leniency as was shown to his fellow-defendants; he protested his abiding loyalty to his country; and asked to be delivered, for the sake of the reputation of the People, as well as of his own, from the hardships and shame of exile.

As for the other accused persons, Demades either did not venture or did not condescend to face the jury; he was condemned and fined, but did not leave Athens. Probably he was able to pay the fine inflicted, and thus remained free to take part in political life. Philocles, who was held responsible for the original admission of Harpalus to Athens, as well as for his acceptance of Harpalus' money, was driven into exile. Aristogeiton and the remainder of the defendants appear to have got off free.²

Such was the history of this unhappy affair. The result of it was that the party opposed to Demosthenes had temporarily a free hand. Not only Alexander, but also his deceased companion Hephæstion, received official worship.³ Mene-

¹ Dem., *Ep.*, ii., §§ 17-20. See Note 4.

² Dein., *in Dem.*, § 104; *in Aristog.*, § 15; Dem., *Ep.*, ii., §§ 15, 16.

sæchmus prosecuted the sons of Lycurgus, claiming that they should make good that alleged deficit in the public accounts for which he had vainly tried to prove their father responsible; and they were actually condemned and imprisoned. But shortly afterwards their cause was taken up by Democles, a pupil of Theophrastus, and by Hypereides, and was strongly supported by Demosthenes in a letter addressed to the People—the third of those ascribed to him—in which he declared that the People of Athens were being ill-spoken of abroad owing to their treatment of the sons of one of their most loyal and public-spirited servants; and that when Pytheas was suffered to riot in wealth and immorality, and those who had taken the patriotic side were driven into exile, it was plain that patriotism was unprofitable. He quoted instances of generous treatment accorded to far less deserving persons, and at the close of the letter pleaded once more for himself, as well as for the sons of Lycurgus. Whether owing to this letter or to the activity of the advocates of the condemned in Athens, the People were moved to remorse for their ingratitude towards one of their greatest benefactors, and the sons of Lycurgus were released.¹

The enemies of Demosthenes did not long enjoy their ascendancy; for early in June, 323, Alexander died at Babylon after a short illness. When first the rumour of his death reached Athens, Demades refused to credit it. "If Alexander were dead," he

¹ *Vit. X Orat.*, 842 d, and *Hyper.*, fragm. 118 (Oxford text).

declared, "the whole world would be reeking of his corpse"¹; and Phocion tried to quiet the public excitement by saying, in the manner characteristic of him, "If Alexander is dead to-day, he will be dead to-morrow and the next day also; so that we have plenty of time to make our plans." In fact the situation was not at all clear, for there was no obvious successor to Alexander; but as the result of the deliberations of his generals at Babylon, it was decided that his half-brother Arrhidæus, a man of feeble mind, should be temporarily acknowledged King, saving the rights of the yet unborn infant of Alexander and Roxana, should it prove to be a boy; that Perdikkas should be regent; that Lysimachus should have the command in Thrace and the Hellespont; and that in Macedonia the supreme power should be divided between Antipater, as commander-in-chief, and Craterus, who shortly afterwards advanced as far as Cilicia, but did not at present proceed to Macedonia. Egypt was assigned to Ptolemy, and various provinces in Asia Minor to Eumenes, Antigonus, Leonnatus, and others.²

Their short experience of Macedonian government led many Greek peoples at this crisis to attempt to throw off the yoke. Risings took place in Rhodes, Chios, and Ephesus.³ In Greece

¹ Plut., *Phoc.*, xxii., etc.

² Arrian, *Suppl.*, §§ 3, 7; Diod., XVIII, ii.-iv., vi.; Dexippus, *fr.* 1.

³ Diod., XVIII, viii.; Suid., *s. v.*, Ephorus; Strabo, XIV, p. 645, etc.; Polyæn., VI, 49.

proper, the first active steps were taken by Leosthenes, an Athenian, who had succeeded in keeping together at Tænarum some eight thousand of the Greek soldiers who had returned from Asia; and this force was increased by the discontented soldiers who flocked thither from all parts, as to a cave of Adullam.¹ On hearing the news of Alexander's death, he went to Athens and opened negotiations with the Council, which gave him fifty talents and a supply of arms, and sent envoys in his interest to the Ætolians, and obtained a ready promise of support. These actions of the Council were not at first made known to the People, and it was not until the fact of Alexander's death was placed beyond all doubt that a proposal to fight for freedom was brought before the Assembly, and recommended to it by Hypereides as well as by messages from Demosthenes.² The richer members of the Assembly advised the maintenance of the Peace, but were overborne by a large majority, the eloquence of Hypereides proving more effective than the cautious advice of Phocion, though some of Phocion's observations were only too well founded.³ "Leosthenes' talk," he said, "is like a cypress-tree—tall but unfruitful." "When," asked Hypereides, "will you ever advise the Athenians to fight?" "When I see the young," said Phocion, "ready to do their duty, and the

³ Diod., XVIII, ix.; Dexippus, fr. 2.

rich to pay taxes, and the politicians to abstain from stealing public money." The army of Leosthenes inspired no confidence in Phocion. "It is good enough," said he, "for the short race. I am afraid of the long—of the campaign; for the city has no other funds or ships or soldiers." But the Assembly was in no mood for caution. It was resolved to equip 240 ships, and to put all Athenians under forty years of age into the field—those belonging to three of the tribes to guard Attica, those belonging to the remaining seven to serve beyond the borders. They further sent embassies to other Greek States, in the hope of inducing them to join in a general rising and to claim their freedom.¹

So unpopular had the Macedonians become, that although it seemed to many persons in the other States that Athens was taking a premature and a dangerous step, the envoys found support almost everywhere. Besides the Ætolians, many northern Greek tribes gave their adhesion—among them some of those Thessalian and neighbouring tribes which had been reckoned the most faithful allies of Macedonia. Bœotia and Eubœa were in the occupation of Macedonian troops or were subject to strong Macedonian influence; yet even in Eubœa the people of Carystus joined in the league. In the Peloponnese, Sparta was powerless, or at least unable to help; but the peoples of Argos, Sicyon, Epidaurus, Trœzen, Elis, and Messenia all promised their aid.² As for funds, the treasure

¹ Diod., XVIII, x.

² *Ibid.*, xi.; Paus., I, xxv., § 4.

of Harpalus was freely used.¹ Demades was prosecuted for making illegal proposals and for impiety, and particularly for his proposal to recognise the divinity of Alexander. He was heavily fined—ten talents according to one authority, one hundred according to another—and lost his civic rights.² Pytheas also was prosecuted and was imprisoned; but he escaped, and he and Callimedon betook themselves to Antipater, and were despatched by him to the Peloponnese to counteract the effect of the embassies sent thither by the Athenians.³ In Arcadia Pytheas encountered Demosthenes, who, though in exile, used all his powers to aid Hypereides, Polyeuctus, and the other spokesmen of Athens. Pytheas (according to Plutarch's story) remarked that, just as asses' milk made mischief in a house, so an Athenian embassy was bound to cause disorders in a state. "No," replied Demosthenes; "asses' milk is a good medicine, and so is a visit from the Athenians."

So great were the services rendered by Demosthenes, that the Athenian People determined to recall him. The formal decree for this purpose was proposed by his nephew Demon; and since it would have been unconstitutional to remit the fine of fifty talents which the orator had been

¹ Diod., XVIII, ix.

³ Suid., *s. v.*, Pytheas; Plut., *Dem.*, xxvii.

condemned to pay, he was ordered to prepare and decorate the altar of Zeus the Saviour for a forthcoming festival, and to enable him to meet this very slight expenditure, the sum of fifty talents was voted to him.¹ We may suspect that the money came out of the treasure of Harpalus. A trireme was sent to convey him from Ægina, and at the Peiræus he was met by a great concourse of his fellow-citizens, headed by the nine archons and the priests; and we are told that he raised his hands towards heaven and thanked the gods that he had been granted an even more honourable return than Alcibiades, since his restoration was not forced upon his fellow-citizens, but was their voluntary act.

Before this happy event took place, the war had probably begun. Leosthenes commenced operations by sending a force of eight thousand men by sea from Tænarum to Ætolia; here he was joined by an army of seven thousand Ætolians; and with the combined forces he marched to Thermopylæ and occupied the Pass without encountering opposition. The Athenians had by this time despatched a force of five thousand citizen-infantry, five hundred cavalry, and two thousand mercenaries to join him; but they were unable to effect a passage through Boeotia, owing to the strong resistance offered by the allies of the Macedonians, until Leosthenes marched southward with part of

¹ Plut., *Dem.*, xxvii.; *Vit. X Orat.*, 846 d; Justin, XIII, v.

his forces, defeated the enemy, and so enabled the Athenian troops to reach Thermopylæ.¹ He then moved northward to confront Antipater, who came to meet him with thirteen thousand infantry and six hundred cavalry, not waiting for the reinforcements which he had urgently requested Craterus and Leonnatus to send. The first engagement took place near Heracleia. In the middle of the battle, Antipater's Thessalian cavalry rode over and joined Leosthenes, and Antipater was obliged to throw himself into the fortress of Lamia, to wait for the expected reinforcements from Asia. He was blockaded by Leosthenes, who had no siege-train with him, and failed to storm the fortress, but hoped to starve the defenders out. Antipater was one time so hard pressed that he asked Leosthenes for terms; but Leosthenes would accept nothing less than unconditional surrender, and this was naturally refused.²

Leosthenes' forces had grown considerably through accessions of troops from the peoples of north Greece, but he could not draw Antipater into the field. A peculiarly severe winter proved even more trying to his soldiers than the petty fighting to which they were continuously exposed; the Ætolians made excuses and returned home; and finally Leosthenes himself was struck on the head by a stone, and died two days afterwards.³

THE ACROPOLIS OF LAMIA
PHOTO BY FRADELLE & YOUNG

The Funeral Oration in honour of Leosthenes and others who had fallen in the campaign was entrusted to Hypereides.¹ The greater part of his speech has come down to us, and is a striking specimen of the type, which was peculiar to Athens. The matter, and even the style, of the speech were largely determined by convention—the introduction, in which the orator apologises for his own inadequacy; the praise of Athens, her indigenous People and the noble upbringing of her sons; the praise of the fallen, and the recital of their services to their country; the prophecy of an immortality of fame for them; the anticipation of their meeting in another world with the glorious men of old; the mingled congratulation and consolation addressed to the bereaved; and (as regards style) the series of those artificial antitheses of which Gorgias had set the example. Yet all these conventional elements are treated by Hypereides with a peculiar grace and no small imaginative power; and the speech is a worthy monument of the last struggle of the Hellenes for freedom.

Leosthenes was succeeded in the command by Antiphilus, who, though he was an able general, had not the commanding personality which was particularly needed, if the depression caused by Leosthenes' death was to be surmounted.² Not

¹ It is very doubtful whether Diodorus is right in saying that Demosthenes had not yet returned to Athens. The reason for the selection of Hypereides was doubtless that he (after Leosthenes) was the chief promoter of the war. (So Schäfer, iii., p. 374.)

² Paus., I, xxv., § 5; Justin, XIII, v.

long afterwards Leonnatus, in response to Antipater's urgent call, crossed to Europe and marched into Thessaly with more than twenty thousand infantry and fifteen hundred cavalry. Antiphilus abandoned the siege of Lamia and moved northwards at the head of twenty-two thousand infantry and thirty-five hundred cavalry. In a severe cavalry engagement, Leonnatus was defeated and slain; and the Macedonian infantry, not daring to face the Thessalian horse, withdrew into the hills. But on the following day Antipater joined forces with the relieving army, and marched northwards, unmolested by Antiphilus; and on the banks of the Peneius he was joined by Craterus and a large army.

At sea the Macedonian fleet proved victorious, and though the Athenians equipped all the ships they could, the total number which put to sea under Euetion was only 170; and they were twice severely defeated—the first time, probably, near Abydos (Euetion having proceeded thither to guard the Hellespont); the second time by Cleitus with 240 ships, near Amorgos.¹ But a force of Macedonians and mercenaries which landed on the coast of Attica near Rhamnus and laid it waste was repulsed with considerable loss by Phocion at the head of a citizen-levy.² At the same time

¹ The evidence of unpublished inscriptions is cited for these battles by Ferguson, *Hellenistic Athens*, p. 17; Diodorus assigns both victories to Cleitus. The Athenians had a larger number of ships, but could not man them. See also Beloch, *Gr. Gesch.*, iii., p. 76 n.

² Diod., XVIII, xv., xvi.; Plut., *Phoc.*, xxv.

Phocion resisted successfully the proposal that an Athenian force should invade Boeotia.¹ Antiphilus remained in Thessaly; but his forces had been for some time falling away, many contingents leaving either because they thought that Leosthenes' successes had settled the war, or because the soldiers had affairs to attend to at home; and signs of discontent showed themselves in the camp. When Antipater and Craterus marched southwards with an army of nearly fifty thousand men in all, Antiphilus had less than thirty thousand to oppose to them. The two armies met at Crannon, on the 7th of Metageitnion (early in August, 322), the anniversary of the battle of Chæroneia. The battle was in itself indecisive, though the Greek loss was heavier than the Macedonian; but the council of war called next day by Antiphilus and Menon (who commanded the cavalry) rejected the proposal to request the Greek States to despatch reinforcements, and decided to send a message to Antipater, asking him to discuss terms of peace. But Antipater refused to recognise the anti-Macedonian league as a whole, and replied that each State must treat with him separately; while at the same time he proceeded to take the Thessalian towns one after another by storm, and Pharsalus among them. The result was that the States of northern Greece soon came to terms with him, being further encouraged to do so by his envoys, who promised favourable terms to those

¹ Plut., *Phoc.*, xxiv.; *Polyæn.*, III, xii.

who submitted; and before long, out of all the members of the league which had been formed, the Ætolians and Athenians alone were left.¹

The Athenians now found it necessary themselves to ask Antipater for conditions of peace. At what precise moment they first sent to him is uncertain. It may have been after the taking of Pharsalus²; but it was probably not until Antipater and Craterus had crossed the Pass of Thermopylæ and encamped in Boeotia. Then the Athenians, in alarm, once more called upon Demades to get them out of their difficulty, restoring to him his civic rights, and cancelling the fine which had led to his loss of them. He went to Antipater's camp with Phocion and Demetrius of Phalerum; but Antipater would agree to no terms except absolute surrender—the only terms which, in an evil hour, Leosthenes had been willing to accept from him at Lamia. That Antipater did not march into Attica, as Craterus desired to do, before dictating terms, was only due to his respect for Phocion.³

The Athenians had no choice but to submit. They had not even, as in former days, any supremacy at sea, and would have had no power to withstand a blockade; and although Demochares, the nephew of Demosthenes, entered the Assembly with his sword and called his fellow-countrymen to

¹ Diod., XVIII, xvii.

² *Vit. X Orat.*, 846 e, does not really prove this.

³ Diod., XVIII, xviii.; Plut., *Phoc.*, xxvi.

arms,¹ it was resolved to send Phocion and the other ambassadors back to Thebes, to announce to Antipater the unconditional surrender of the city. The philosopher Xenocrates, the head of the Academy, was sent with them, in the hope that being a friend of Antipater he might use his influence to advantage; but Antipater refused to hear him.² Antipater then announced that the Athenians would be allowed to retain possession of Attica, but not of Oropus, which was given to the Boeotians. Lemnos and Imbros appear also to have remained in the hands of Athens.³ The question of the possession of Samos was referred to the regent Perdiccas, who subsequently restored the island to its former inhabitants, and ordered the Athenian settlers to withdraw. The Athenians were required to deliver up to Antipater the orators who had promoted the war; and to revise the constitution in such a way as to restrict the franchise to citizens who had a property of at least twenty minæ. On these conditions they would be permitted to be the friends and allies of Macedonia. A Macedonian garrison was to be placed in Munychia, and a heavy war-indemnity was required.⁴ Xenocrates is said, on hearing the terms, to have declared them to be reasonable terms for slaves, but harsh for free men; and

¹ *Vit. X Orat.*, 847 c., d.

² *Plut., Phoc.*, xxvii.

³ *Diod.*, XIX, lxxviii.; XX, xlvi.; *C.I.A.*, ii., 268, 592, 737, etc.

⁴ *Diod.*, XVIII, xviii., lvi.; *Plut., Phoc.*, xxvii.; *Diog. Lært.*, X, i.

Phocion did his best to induce Antipater to give up his determination to garrison Munychia, but in vain. "I will do you any favour, Phocion," Antipater replied, "which does not mean destruction for you and for us"; and Callimedon, one of Phocion's colleagues, and a man of strongly anti-democratic sentiments, is said himself to have opposed Phocion's request. The surest way to quell any desire to resist the conqueror was to disfranchise the greater number of those poorer citizens whose inclinations were generally towards war. On the day of the procession which escorted the statue of Iacchus from Athens to Eleusis, at the opening of the Eleusinian Mysteries (the 20th of Boëdromion, in the middle of September, 322),—ordinarily a day of joy and religious emotion,—a Macedonian force under Menyllus occupied Munychia, and the visible proof of the humiliation of Athens was complete. By the constitutional change imposed upon the city 12,000 citizens lost the franchise, and 9000 only retained it. A very large proportion of those who were disfranchised were deported at Antipater's bidding to new homes in Thrace and elsewhere.

The chief power in Athens was once more in the hands of Demades and Phocion, with whom were associated Pytheas, Callimedon, and others of the Macedonian party. On the proposal of Demades, sentence of death for high treason was passed against Demosthenes, Hypereides, Himeræus, and

¹ Diod., XVIII, xviii.; Plut., *Phoc.*, xxviii.

CALAUVEIA, VIEW NEAR THE PRECINCT OF POSEIDON

PHOTO BY MR. A. B. COOK

other patriotic orators.¹ The condemned had probably already fled from Athens; but the emissaries of Antipater were in pursuit, and did their work only too well, taking no account even of the privilege of sanctuary.² Archias of Thurii, surnamed "the exile-hunter,"⁴ seized Hypereides, Himeræus, and Aristonicus in the temple of Æacus in Ægina, and sent them to Antipater at Cleonæ, where they were executed on the 9th of Pyanepsion (early in October).³ Demosthenes took refuge in the sanctuary of Poseidon in the island of Calauria. There Archias landed with some Thracian soldiers, and first tried to induce him to leave the sanctuary by promising that he should suffer no injury. According to Plutarch's story, Demosthenes had had a dream on the previous night, in which he thought that he was acting a tragedy, as the rival of Archias (who had been an actor by profession), and that though he won the favour of the audience, he failed in the end for lack of proper equipment. No offer that Archias could now make induced him to surrender. "Your acting, Archias," he said, "never convinced me yet, nor will your promises now." Archias then changed his tone, and began to use threats. "Ah!" said Demosthenes, "now I hear the voice from the Macedonian tripod; you were acting until now. Wait a little," he added, "until I have written a message to my friends at home." He

⁴ Plut., *Dem.*, xxviii., etc.; comp. *Vit. X Orat.*, 849 b, c.

then retired within the temple and took a tablet, and biting the end of his pen, as he used to do when he was composing, he kept it between his lips for a short time, and then covered up his head. The soldiers thought that this was a sign of cowardice, and Archias again offered to effect a reconciliation for him with Antipater. But when Demosthenes felt the poison, which he had concealed in the quill, beginning to work, he cried, "Now, Antipater, the time has come when you can play the part of Creon, and cast my body away unburied. Dear Poseidon, I leave thy sacred precincts before I die; for Antipater and the Macedonians have not even left thy sanctuary unpolluted." So saying, he tottered forward. As he passed the altar he fell, and died with a single groan. The day was the 16th of Pyanepsion, the day on which the women celebrating the Thesmophoria held their solemn fast.¹

NOTES TO CHAPTER XIII

1. Mr. D. G. Hogarth in the *English Historical Review* for 1887, p. 317, and (with some slight modifications) in his *Philip and Alexander of Macedon*, p. 198, attempts to prove that the demand for divine honours for Alexander was made not by himself,

¹ Plut., *Dem.*, xxix., xxx. Plutarch mentions some variations of the story which became current; e. g. that he imbibed the poison from an amulet, or took it from a bag which he carried around his neck. He adds that the heading, but no more, of a letter to Antipater was found upon his person when he fell, according to one version. Demochares stated some years afterwards that his uncle had not died of poison, but had been mercifully taken out of this life by the gods at this critical moment.

but by his supporters in the several cities of Greece, and was "a spontaneous outburst of adulation from various cities, led by the philo-Macedonian party in each, intended to greet the conqueror on the earliest occasion whereon an embassy could approach his presence." He points out that the only authority which expressly mentions a letter from Alexander as the occasion of the votes and debates in the several cities is Ælian., *Var. Hist.*, II, xix., who records how ἄλλοι μὲν ἄλλα ἐψηφίσαντο, Λακεδαιμόνιοι δ' ἐκέλευα, 'Επεὶ δὴ 'Αλέξανδρος βούλεται θεὸς εἶναι, ἔστω θεός. Arrian, VII, xxiii., describes the embassies which subsequently went to Alexander as garbed ὥσπερ θεωροὶ δῆθεν εἰς τιμὴν θεοῦ ἀφίγμενοι, but does not say that it was in obedience to a command from Alexander that they did so. It is true that Ælian is not always trustworthy; but it is surely not justifiable to discredit his story on the ground that the Spartan reply is too characteristically "Laconic" to be true—at least to be true of Sparta in 324. Nor is the fact that his head was not struck on any coin (for this was a mark of divinity) in his lifetime in itself conclusive, especially as he died so soon after the date of the alleged claim to divine honours.

Mr. Hogarth also tries to show that the προσκύνησις or adoration of Alexander in Bactria in 327 was due to a politic determination on his part to assimilate the habit of the two peoples—the Persian and the Macedonian—in their King's presence, and did not imply a claim to divinity. But those who were present certainly interpreted it in the latter way, if there is any truth in Arrian's account; and Mr. Hogarth's attempt to discredit Arrian's authority at this point is not very convincing.

At best, it must be left an open question whether Alexander himself claimed divinity or not. So far as the position in Athens is concerned, it makes little difference whether the demand was initiated by Alexander or by Demades; though it does affect our estimate of Alexander's character, which Mr. Hogarth is concerned to defend. (See also Ed. Meyer, *Kleine Schriften*, pp. 285 ff.; esp. pp. 330, 332.)

2. In Plut., *Dem.*, ix., and *Vit. X Orat.*, 845 b, c, we find the story of a brilliant address delivered by Demosthenes at Olympia, in reply to a sophist named Lamachus, who had uttered a panegyric on Philip and Alexander, combined with denunciations of the Thebans and Chalcideans; whose services to Greece Demosthenes

extolled, while attacking those who flattered the Macedonians. No date is given, and Schäfer assigns the incident to the present occasion; but it seems at least as likely that it took place in 332, though we have no independent evidence of Demosthenes' presence at Olympia in that year.

3. Haupt (*Die Vorgeschichte des harpalischen Processes, Rhein. Mus.*, xxxiv., pp. 377-387) thinks that the split in the anti-Macedonian party may have been of still longer standing. He notes that Hypereides gets his material for the denunciation of Demosthenes from as far back as the date of the destruction of Thebes; and that he and Deinarchus use virtually the same language about Thebes and about the alleged overtures of Demosthenes to Alexander and Olympias; and he argues that this means that Hypereides cannot have been in agreement with Demosthenes at that time. But all that it necessarily implies is that he was getting up the best case he could against Demosthenes, and using any material that would serve his turn. He may, however, have been alienated by Demosthenes' withdrawal of active support from the Peloponnesian revolt in 330, or by his acquiescence in the recognition of Alexander's divinity. It is also possible (see above, p. 448) that the substitution of Menesæchmus for Lycurgus in 326 was due to differences in the party; but the evidence does not permit certainty.

4. The genuineness of the Second and Third Letters ascribed to Demosthenes is disputed by Schäfer, Westermann and others. Absolute proof is impossible; but Blass (*Att. Ber.*, III, i., pp. 440 ff., and III, ii., pp. 406-7) makes out a very strong case for their genuineness, and I have felt at liberty to use them as historical documents. If they are not by Demosthenes, they probably date from very shortly after his time; and nothing of first-rate importance depends upon them. The genuineness of the First Letter is far more doubtful (it is an exhortation to internal unity after the death of Alexander). The Fourth and Fifth are probably spurious.

CHAPTER XIV

CONCLUSION

THE question how far Demosthenes was justified in the policy which he pursued has been discussed in the preceding chapters in relation to each of the principal crises of the struggle in which he played so large a part. His vindication of himself in the Speech on the Crown is more convincing than any discussion at the present day can possibly be, and very little more need be said.

The claim of Demosthenes to be ranked among the heroic men of the past rests above all on the constancy and sincerity with which he defended the noblest cause known to the Greeks—that of Hellenic liberty; and only those who have failed to recognise that most of what was best in the Greek, and, above all, in the Athenian character sprang from and was bound up with political liberty, can seriously censure his choice. If any cause was, to a Greek, worth fighting for to the death, that for which Demosthenes fought and died was pre-eminently so. Polybius indeed,¹ writing two centuries later, declared that the

¹ Polybius, XVII, xiv.

"crop of traitors" in the Greek cities, whom Demosthenes so vehemently denounced, deserved no such name, and that they were pursuing the true interest of their several countries in submitting to Philip and Alexander, and finding in subjection to a common master that freedom from strife with one another which they had failed to find so long as they were autonomous. Yet such a solution of their political problems can hardly be called an honourable one; nor did these States ever bring forth fruits comparable to those achievements by which the Athenians, when they were most fully inspired by the spirit of freedom, won the admiration of humanity.

Moreover, it is plain that the test by which Polybius tried the policy of the statesmen of the fourth century was simply that of success. Demosthenes' policy, he said, led to the disaster of Chæroneia, whereas the Arcadians and Messenians enjoyed the blessings of peace. If success is the true and only test of statesmanship, Polybius was doubtless right. But if political liberty had proved itself so precious that without it the whole of life would have seemed to be lived on a lower plane, success was an altogether unworthy criterion by which to judge the actions of those who were dominated by such a sentiment. Demosthenes was convinced that such was the persuasion of the Athenians, if not of all other Greek peoples, and that by struggling to the end for the freedom of Athens, and causing the Athenians to struggle

for the freedom of the Hellenes, he was fulfilling their noblest instincts.

If, however, success is seriously taken to be the proper criterion of merit, it must not be forgotten that the policy of Demosthenes very nearly did succeed. Philip was actually discomfited before Byzantium; and the defeat of Chæroneia was due to nothing which it was in Demosthenes' power to provide against, nor even to the inferiority of the forces which he had brought together, but simply to bad generalship. Whether, supposing that Philip had been defeated at Chæroneia, the struggle would have been at an end, no one can say; and it is idle to speculate upon such questions; but at least the defenders of Hellenic liberty came near enough to success to justify their attempt, even from the narrow standpoint assumed by Polybius and by some modern critics. Nor is it without significance that Aristotle (who had no special liking for Demosthenes), when he desires to illustrate a common form of fallacy,¹ finds a conspicuous illustration in the statement that the policy of Demosthenes was responsible for all the evils that befell his country.

The principal causes of the failure of Demosthenes' plans have long been plain to us—the unsteadiness of the Athenian people; the lack of generals comparable in ability to the statesmen of the time; the disunion of the Greek States. For the second of these causes, no blame attaches to

¹ The argument *post hoc, ergo propter hoc*: Ar., *Rhet.*, II, xxiv.

Demosthenes, and it is not certain that he could have been aware of the inferiority of the Athenian commanders until they were put to the test. The disunion of the States he strove hard to overcome, and to a very remarkable extent he succeeded. The alliance of Thebes and Athens was a thing of which the most sanguine prophet could never have dreamed a few years before.

But ought Demosthenes to have recognised that his fellow-countrymen were no longer equal to the strain to which he desired to subject them? Is he to be blamed for taking too generous a view of their character? Certainly he was not unaware of their defects. No one ever pointed out more candidly than he, how far they fell short of the traditional ideal of Athenian citizenship, or realised more clearly their unwillingness to sacrifice pleasure and ease, and to undertake great personal risks for the sake of the national honour. The fickle and spasmodic nature of their patriotism, their liability to be carried about by alternate gusts of courage and alarm, were constantly before him. Yet even so, incapable of sustained effort and prolonged sacrifices as the Athenians were, it was a nobler thing to attempt to revive in them the spirit which they had lost, than to acquiesce in their degeneracy and levity, and to "despair of the Republic." Nor must it be forgotten that in this attempt also Demosthenes came nearly enough within reach of success to justify his policy in the judgment of any large-minded critic.

Demosthenes' ideal and his determination to maintain it, as the ideal not of himself alone but of his nation, stand in no need of vindication; and he well deserves our admiration for the courage with which, in pursuit of this ideal, he contended against those desires and prejudices of his fellow-countrymen which were inconsistent with it. In three important points at least, his policy ran directly counter to popular sentiment—in his demand that the festival-money should be given up for purposes of war; in his far-sighted desire to bring about an alliance with Thebes; and in his attempt to obtain the co-operation of the Persian King against Philip. Yet all these aims he pursued without faltering in face of attack and misrepresentation; and there can be little doubt that he was wise, as well as courageous, in so doing.

The question whether liberty and pre-eminence are political ideals which possess a universal value and need no justification is too large to discuss here. There are many who believe (as Plato and Aristotle probably believed) that these are secondary in importance to the good life of the individual in a peaceful society, and to whom militarism and imperialism are consequently abominable. There is something to be said for this view. But it must not be forgotten that in the Athens of Demosthenes' day it was a view which had not made its way into the region of practical politics, but was peculiar to philosophic circles. There is no evi-

dence that it was desire for the good life, or for the refined enjoyment of art, literature, and philosophy, that made the majority of the Athenians unwilling to fight; or that any higher motives than business, pleasure, and love of ease were the cause of their reluctance. Nor is it an absurd contention that the life of the individual is itself greatly ennobled by membership of an imperial nation.¹ It may at least be doubted whether more than a handful of Athenians thought otherwise; and if so, it is a mistake to judge Demosthenes by a standard which is out of relation to the political life of his times.

The faults which sullied the character of Demosthenes as a public man are not only conspicuous, but are such as tend in many ways to alienate the sympathies of the modern world from him. The worst, perhaps, was an indifference to truth, which, while it was not incompatible with the larger sincerity manifested in his constancy to the supreme objects of his life, led him to deal very unfairly with his opponents, to falsify history, and to repudiate his own share in transactions which were perfectly proper, but which had come in time to be viewed with disfavour by the majority of the Athenians. Doubtless some of the blame

¹ It cannot of course be contended that the noblest element in British imperialism—the government of dependent races for the good of the governed, and the bringing of light to those who sit in darkness—was present in the imperialism of Athens, but this does not invalidate the contention stated in the text.

for this should be assigned to the People itself; and Demosthenes' attempts to deceive the People in regard to the past are in some degree excusable when we consider that if he had spoken or admitted the whole truth, his policy in regard to the present and future would certainly have been imperilled. It may be that absolute truthfulness is not possible for the leader of a democracy. But it is difficult not to feel that the misrepresentations of which Demosthenes was guilty sometimes went beyond anything that such considerations can justify; that one who could lament over the calamities of the Phocians, which he had done nothing to prevent, and could ascribe them to the man who (if any one had done so) had helped to mitigate them deserves the severest reprobation; and that his scandalous inventions in regard to his rival's history and morals are utterly atrocious. There was also a certain *intransigence*—amounting at times almost to ferocity—in his absolute refusal to consider even the most reasonable offers which Philip might make, and in the steps which he took to exacerbate the relations between Athens and the King of Macedon. No doubt he was whole-heartedly convinced that even if a compact, as favourable to Athens as possible, were made with Philip, it would mean at best that Athens would be sure only of the second place in the Hellenic world; and that whatever compact were made, it would only be observed by Philip until such time as he desired to break it. Yet Demos-

thenes, however sincere and patriotic he may have been, is sometimes repellent in the hatred which he displays, and at times this hatred led him to make false charges and to commit acts of cruelty which admit of no justification.

In his money-dealings he did not always observe the standard of correctness which a modern statesman is expected, as a matter of course, to observe. There is not, however, an iota of evidence that will stand criticism to show that he profited personally by any of the transactions that were alleged against him; and the worst of these transactions, the appropriation of Harpalus' treasure, was probably dictated, just as his receipt of the gold from Persia had been, by public spirit so intense as to render him unscrupulous about means. Judged by the standard of his times, he is almost beyond reproach. It is not unworthy of notice that within a few months of condemning Demosthenes for taking some of Harpalus' money, the People themselves took all that was left of it to pay the cost of the Lamian War. No one now asserts that the policy of Demosthenes was in the smallest degree influenced by considerations of gain or of gratitude for presents received. It is doubtful whether this could be said of some of the orators who opposed him.

To the enumeration of his faults as a statesman, it must be added that he seems to have been a man of an unsociable and unfriendly temperament, and a bitter and relentless enemy; in all that we

learn about him from the ancients or from his own writings, there is no hint of any intimate friendship or domestic affection. So wholly was he identified with political aims, that he almost seems to have had no private life. He was, moreover, deficient in humour and in gentlemanly feeling; and both these faults reveal an unattractive narrowness of imagination.

But against these faults, public and private, is to be set a devotion to a great ideal, absorbing the whole man; a capacity for work unrivalled in the history of great statesmen; a thoroughness in all that he did, which cared for every detail, and left nothing to chance; a gift of language, penetrated and transformed into eloquence of the very highest order by the passion for a great cause; and a courage which rose superior to all physical weakness, and was not daunted by failure or danger. The greatness of his character in these respects more than redeems its unloveliness.*

Many years after Demosthenes' death, in the year 280 B.C., when there was a temporary revival of the spirit of independence in Athens, his nephew Demochares carried a decree that his statue in bronze should be erected in the market-place, and that the eldest son of his house should always receive maintenance at the public cost in

* I have attempted a brief appreciation of the character of Demosthenes as an orator in the introduction to my translation of the Public Speeches, and need not repeat what is there said. See also Index, *s. v.* Demosthenes.

the Prytaneum. The statue which was erected was the work of Polyeuctus, and its character is familiar to us through the two great copies of it in marble which have come down to us. Of these one is in Lord Sackville's collection at Knole, the other in the Vatican. In both these the hands which hold a roll are substitutes for those which originally belonged to the statue. In the original the hands were clasped tightly, and a story is told of a soldier who deposited all his money in the hollow formed by these clasped hands; the leaves of a plane-tree which stood near fell into the hollow and concealed the gold for a long time; and when the soldier came back and found his money, the wits of the time vied in making epigrams on the orator's incorruptibility.¹ In the year 1901 a pair of clasped hands in marble was found in the gardens of the Palazzo Barberini in Rome. These proved to be the hands of a copy of the original work of Polyeuctus; and a cast of the Vatican statue which was made, with these hands in place of the well-known ones, proves the superiority of the original design.² The earnestness and strong emotion which the clasped hands betoken are in keeping with the character of Demosthenes as a politician and an orator. It is possible that the hands which hold a roll were substituted at some

Heroes of the Nations

A SERIES of biographical studies of the lives and work of a number of representative historical characters about whom have gathered the great traditions of the Nations to which they belonged, and who have been accepted, in many instances, as types of the several National ideals. With the life of each typical character will be presented a picture of the National conditions surrounding him during his career.

The narratives are the work of writers who are recognized authorities on their several subjects, and, while thoroughly trustworthy as history, will present picturesque and dramatic "stories" of the Men and of the events connected with them.

To the Life of each "Hero" will be given one duodecimo volume, handsomely printed in large type, provided with maps and adequately illustrated according to the special requirements of the several subjects.

For full list of volumes see next page.

HEROES OF THE NATIONS

NELSON. By W. Clark Russell.
GUSTAVUS ADOLPHUS. By C. R. L. Fletcher.
PERICLES. By Evelyn Abbott.
THEODORIC THE GOTH. By Thomas Hodgkin.

BLÜCHER. By E. F. Henderson.
ROGER THE GREAT. By E. Curtis.
CANUTE THE GREAT. By L. M. Larson.
CAVOUR. By Pietro Orsi.
DEMOSTHENES. By A. W. Pickard-Cambridge.

The Story of the Nations

IN the story form the current of each National life is distinctly indicated, and its picturesque and noteworthy periods and episodes are presented for the reader in their philosophical relation to each other as well as to universal history.

It is the plan of the writers of the different volumes to enter into the real life of the peoples, and to bring them before the reader as they actually lived, labored, and struggled—as they studied and wrote, and as they amused themselves. In carrying out this plan, the myths, with which the history of all lands begins, will not be overlooked, though these will be carefully distinguished from the actual history, so far as the labors of the accepted historical authorities have resulted in definite conclusions.

The subjects of the different volumes have been planned to cover connecting and, as far as possible, consecutive epochs or periods, so that the set when completed will present in a comprehensive narrative the chief events in the great STORY OF THE NATIONS; but it is, of course, not always practicable to **issue** the several volumes in their chronological order.

For list of volumes see next page.

THE STORY OF THE NATIONS

- GREECE.** Prof. Jas. A. Harrison.
ROME. Arthur Gilman.
